APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 1

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 1

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 1

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.10170
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 1

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):
Average Width (ft): [ ]
Average Depth (ft): [ ]
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: [ ]

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: [ ]

Surface Flow is: Discrete and Confined Characteristics: [ ]
Subsurface Flow: No Explain: [ ]
☐ Dye (or other) test performed: [ ]

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): [ ]

☐ Discontinuous? Explain: [ ]

APPROVED JURISDICTIONAL DETERMINATION FORM

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 788.96 linear feet (ft), 3.31 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 10

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 10

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00502
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 552.82 linear feet (ft), 2.77 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 100

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 100

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 100

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.50007
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 100

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 100

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac):

Wetland Type, Explain:

Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: Explain:

Surface Flow is:

Characteristics:

Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- ☐ Wetland Directly Abutting Non-TNW
- ☐ Wetland Not Directly Abutting Non-TNW
  - ☐ Discrete wetland hydrologic connection Explain:
  - ☐ Ecologcal connection Explain:
  - ☐ Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 2334.94 linear feet (ft), 6.88 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Feature ID: 101

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 101

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 101

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.12144
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1676.98 linear feet (ft), 6.54 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Feature ID: 102

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 102

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.02546
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 102

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	762.51	linear feet (ft),	6.34	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 103

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 103

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 103

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	1.39426
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 103

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 629.51 linear feet (ft), 9.29 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 104

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 104

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:
☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 104

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01283
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 307.46 linear feet (ft), 3.57 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 105

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 105

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 105

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.02385
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 105

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	547.29	linear feet (ft),	5.11	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 106

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 106

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.55555
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 106

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 715.19 linear feet (ft), 10.78 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 107

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.21435

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 590.57 linear feet (ft), 9.25 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 108

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 108

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 108

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.02276
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 108

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 108

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac):

Wetland Type, Explain:

Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: Explain:

Surface Flow is:

Characteristics:

Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- ☐ Wetland Directly Abutting Non-TNW
- ☐ Wetland Not Directly Abutting Non-TNW
  - ☐ Discrete wetland hydrologic connection Explain:
  - ☐ Ecologcal connection Explain:
  - ☐ Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 519.62 linear feet (ft), 6.44 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 109

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 109

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01397
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 713.24 linear feet (ft), 6.06 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 11

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 11

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.02668
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	154.18	linear feet (ft),	4.68	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 110

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 110

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	9.09191
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 110

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 110

- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 2645.83 linear feet (ft), 11.38 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 111

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 111

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	20.86087
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 111

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac):

Wetland Type, Explain:

Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: Explain:

Surface Flow is:

Characteristics:

Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- ☐ Wetland Directly Abutting Non-TNW
- ☐ Wetland Not Directly Abutting Non-TNW
  - ☐ Discrete wetland hydrologic connection Explain:
  - ☐ Ecologcal connection Explain:
  - ☐ Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 2643.13 linear feet (ft), 8.84 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

- ☐ Office Concurs with data sheets/delineation report
- ☐ Office Does Not Concur with data sheets/delineation report

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 112

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 112

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 112

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.07497
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 112

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac):

Wetland Type, Explain:

Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1182.86 linear feet (ft), 7.26 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 113

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.12667
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 113

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):
Average Width (ft): [ ]
Average Depth (ft): [ ]
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

- [x] Silts
- [ ] Sands
- [ ] Concrete
- [ ] Muck
- [ ] Cobbles
- [x] Gravel
- [ ] Bedrock
- [ ] Substrate - Vegetation

Other, Explain: [ ]

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: [ ]

Surface Flow is: Discrete and Confined Characteristics: [ ]
Subsurface Flow: No Explain: [ ]

- [ ] Dye (or other) test performed: [ ]

Tributary Has (Check all that apply):

- [ ] Bed and Banks
- [x] OHWM (check all the apply): OHWM Indicators:
  - [ ] Clear, natural line impressed on the bank
  - [x] Changes in soil character
  - [ ] Shelving
  - [ ] Vegetation matted down, bent or absent
  - [ ] Leaf litter disturbed or washed away
  - [ ] Sediment deposition
  - [ ] Water staining
  - [x] Presence of litter and debris
  - [ ] Destruction of terrestrial vegetation
  - [ ] Presence of wrack line
  - [ ] Sediment sorting
  - [x] Scour
  - [ ] Multiple observed or predicted flow events
  - [ ] Abrupt change in plant community

Other (list): [ ]

- [ ] Discontinuous? Explain: [ ]

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	847.11	linear feet (ft),	6.76	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 114

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 114

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.02599
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1342.19 linear feet (ft), 4.15 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 115

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 115

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 115

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00117
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 115

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):
Average Width (ft): [ ]
Average Depth (ft): [ ]
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: [ ]

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: [ ]

Surface Flow is: Discrete and Confined Characteristics: [ ]
Subsurface Flow: No Explain: [ ]
☐ Dye (or other) test performed: [ ]

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): [ ]

☐ Discontinuous? Explain: [ ]

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 115

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac):

Wetland Type, Explain:

Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: Explain:

Surface Flow is:

Characteristics:

(c) Wetland Adjacency Determination with Non-TNW:

- ☐ Wetland Directly Abutting Non-TNW
- ☐ Wetland Not Directly Abutting Non-TNW
  - ☐ Discrete wetland hydrologic connection Explain:
  - ☐ Ecologcal connection Explain:
  - ☐ Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 141.77 linear feet (ft), 5.56 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 116

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 116

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00744
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 281.34 linear feet (ft), 5.45 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 117

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 117

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:
☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01562
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 172.67 linear feet (ft), 3.79 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 118

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 118

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 118

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.52366
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 118

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1468.01 linear feet (ft), 10.15 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 119

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 119

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 119

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01233
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 2005.83 linear feet (ft), 4.84 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 12

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 12

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00201
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 12

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

APPROVED JURISDICTIONAL DETERMINATION FORM

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 201.74 linear feet (ft), 3.77 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 120

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 120

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 120

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01815
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 120

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 536.34 linear feet (ft), 4.64 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 121

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01848

Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	271.31	linear feet (ft),	3.62	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

- ☐ Office Concurs with data sheets/delineation report
- ☐ Office Does Not Concur with data sheets/delineation report

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 122

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 122

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 122

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.02968
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 122

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):
Average Width (ft): [ ]
Average Depth (ft): [ ]
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: [ ]

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: [ ]

Surface Flow is: Discrete and Confined Characteristics: [ ]
Subsurface Flow: No Explain: [ ]
☐ Dye (or other) test performed: [ ]

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): [ ]

☐ Discontinuous? Explain: [ ]

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 2137.64 linear feet (ft), 4.52 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 123

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 123

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 123

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.45413
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1405.61 linear feet (ft), 7.70 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

Feature ID: 124

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 124

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:
☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 124

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00412
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	371.61	linear feet (ft),	3.87	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 125

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 125

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 125

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.28894
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 125

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	951.75	linear feet (ft),	11.13	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 126

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01728
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 736.56 linear feet (ft), 6.49 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 127

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 127

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:
☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 127

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.13396
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 127

Project waters are ____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are ____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: ____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: ____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): ____
Average Depth (ft): ____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: ____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: ____

Surface Flow is: Discrete and Confined Characteristics: ____
Subsurface Flow: No Explain: ____
☐ Dye (or other) test performed: ____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): ____

☐ Discontinuous? Explain: ____

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1452.61 linear feet (ft), 5.07 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 128

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 128

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 128

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01570
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 128

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 128

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1043.60 linear feet (ft), 5.14 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 129

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 129

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 129

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00851
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 328.78 linear feet (ft), 3.72 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 13

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 13

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.16963
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 13

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft):
Average Depth (ft):
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

- [x] Silts
- [ ] Sands
- [ ] Concrete
- [ ] Muck
- [ ] Cobbles
- [x] Gravel
- [ ] Bedrock
- [ ] Substrate - Vegetation

Other, Explain:

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined Characteristics:
Subsurface Flow: No Explain:

- [ ] Dye (or other) test performed:

Tributary Has (Check all that apply):

- [ ] Bed and Banks
- [x] OHWM (check all the apply): OHWM Indicators:
  - [ ] Clear, natural line impressed on the bank
  - [x] Changes in soil character
  - [ ] Shelving
  - [ ] Vegetation matted down, bent or absent
  - [ ] Leaf litter disturbed or washed away
  - [ ] Sediment deposition
  - [ ] Water staining
  - [x] Presence of litter and debris
  - [ ] Destruction of terrestrial vegetation
  - [ ] Presence of wrack line
  - [ ] Sediment sorting
  - [x] Scour
  - [ ] Multiple observed or predicted flow events
  - [ ] Abrupt change in plant community

Other (list):

- [ ] Discontinuous? Explain:

APPROVED JURISDICTIONAL DETERMINATION FORM

Feature ID: 13

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac):

Wetland Type, Explain:

Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: Explain:

Surface Flow is:

Characteristics:

Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- ☐ Wetland Directly Abutting Non-TNW
- ☐ Wetland Not Directly Abutting Non-TNW
  - ☐ Discrete wetland hydrologic connection Explain:
  - ☐ Ecologcal connection Explain:
  - ☐ Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	839.53	linear feet (ft),	4.31	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 130

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 130

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	8.40256
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 130

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1174.14 linear feet (ft), 16.90 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Feature ID: 131

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 131

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 131

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.06103
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 807.90 linear feet (ft), 8.99 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 132

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 132

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 132

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.25227
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 132

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1270.85 linear feet (ft), 7.19 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 133

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 133

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:
☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 133

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00375
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 667.64 linear feet (ft), 3.77 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 134

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 134

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 134

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.02611
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 134

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft):
Average Depth (ft):
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

- [x] Silts

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	814.01	linear feet (ft),	4.13	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 135

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 135

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 135

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00347
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 135

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft):
Average Depth (ft):
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

- [x] Silts

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 350.62 linear feet (ft), 3.67 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 136

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 136

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 136

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.12572
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 556.25 linear feet (ft), 4.87 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 137

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 137

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.07861
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 137

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):
Average Width (ft): [ ]
Average Depth (ft): [ ]
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

- [x] Silts
- [ ] Sands
- [ ] Concrete
- [ ] Muck
- [ ] Cobbles
- [x] Gravel
- [ ] Bedrock
- [ ] Substrate - Vegetation

Other, Explain: [ ]

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: [ ]

Surface Flow is: Discrete and Confined Characteristics: [ ]
Subsurface Flow: No Explain: [ ]

- [ ] Dye (or other) test performed: [ ]

Tributary Has (Check all that apply):

- [ ] Bed and Banks
- [x] OHWM (check all the apply): OHWM Indicators:
  - [ ] Clear, natural line impressed on the bank
  - [x] Changes in soil character
  - [ ] Shelving
  - [ ] Vegetation matted down, bent or absent
  - [ ] Leaf litter disturbed or washed away
  - [ ] Sediment deposition
  - [ ] Water staining
  - [x] Presence of litter and debris
  - [ ] Destruction of terrestrial vegetation
  - [ ] Presence of wrack line
  - [ ] Sediment sorting
  - [x] Scour
  - [ ] Multiple observed or predicted flow events
  - [ ] Abrupt change in plant community

Other (list): [ ]

- [ ] Discontinuous? Explain: [ ]

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac):

Wetland Type, Explain:

Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: Explain:

Surface Flow is:

Characteristics:

Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- ☐ Wetland Directly Abutting Non-TNW
- ☐ Wetland Not Directly Abutting Non-TNW
  - ☐ Discrete wetland hydrologic connection Explain:
  - ☐ Ecologcal connection Explain:
  - ☐ Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 623.40 linear feet (ft), 5.50 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 138

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 138

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 138

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01418
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	570.41	linear feet (ft),	5.48	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

Feature ID: 139

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 139

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 139

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.82725
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1928.80 linear feet (ft), 9.84 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 14

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 14

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 14

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.20101
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 14

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1390.17 linear feet (ft), 3.77 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 140

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 140

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01034
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 140

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 715.86 linear feet (ft), 4.72 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 141

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 141

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00417
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 141

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft):
Average Depth (ft):
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

- [x] Silts
- [ ] Sands
- [ ] Concrete
- [ ] Muck
- [ ] Cobbles
- [x] Gravel
- [ ] Bedrock
- [ ] Substrate - Vegetation

Other, Explain:

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined Characteristics:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	394.18	linear feet (ft),	3.37	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 142

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 142

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.04308
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 142

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):
Average Width (ft): [ ]
Average Depth (ft): [ ]
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: [ ]

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: [ ]

Surface Flow is: Discrete and Confined Characteristics: [ ]
Subsurface Flow: No Explain: [ ]
☐ Dye (or other) test performed: [ ]

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): [ ]

☐ Discontinuous? Explain: [ ]

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 568.07 linear feet (ft), 4.35 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 143

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 143

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 143

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.15446
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 143

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	707.17	linear feet (ft),	12.33	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 144

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 144

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:
☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 144

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.54750
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 144

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):
Average Width (ft): [ ]
Average Depth (ft): [ ]
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: [ ]

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: [ ]

Surface Flow is: Discrete and Confined Characteristics: [ ]
Subsurface Flow: No Explain: [ ]
☐ Dye (or other) test performed: [ ]

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): [ ]

☐ Discontinuous? Explain: [ ]

APPROVED JURISDICTIONAL DETERMINATION FORM

Feature ID: 144

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac):

Wetland Type, Explain:

Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: Explain:

Surface Flow is:

Characteristics:

Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- ☐ Wetland Directly Abutting Non-TNW
- ☐ Wetland Not Directly Abutting Non-TNW
  - ☐ Discrete wetland hydrologic connection Explain:
  - ☐ Ecologcal connection Explain:
  - ☐ Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 591.85 linear feet (ft), 12.57 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 145

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 145

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 145

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01298
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 221.32 linear feet (ft), 4.09 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 146

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 146

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00993
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 357.48 linear feet (ft), 4.85 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 147

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 147

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 147

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00117
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 184.47 linear feet (ft), 3.59 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 148

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 148

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 148

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.15241
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 642.39 linear feet (ft), 6.94 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 149

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 149

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 149

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.06118
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 149

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):
Average Width (ft): [ ]
Average Depth (ft): [ ]
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	201.27	linear feet (ft),	3.10	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 15

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 15

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 15

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.08843
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 15

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 552.56 linear feet (ft), 56.18 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 150

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 150

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:
☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 150

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.19678
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1044.62 linear feet (ft), 17.49 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

- ☐ Office Concurs with data sheets/delineation report

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 151

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 151

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 151

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.02262
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 151

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):
Average Width (ft): [ ]
Average Depth (ft): [ ]
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: [ ]

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: [ ]

Surface Flow is: Discrete and Confined Characteristics: [ ]
Subsurface Flow: No Explain: [ ]
☐ Dye (or other) test performed: [ ]

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): [ ]

☐ Discontinuous? Explain: [ ]

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac):

Wetland Type, Explain:

Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

Surface Flow is:

Characteristics:

Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- ☐ Wetland Directly Abutting Non-TNW
- ☐ Wetland Not Directly Abutting Non-TNW
  - ☐ Discrete wetland hydrologic connection Explain:
  - ☐ Ecologcal connection Explain:
  - ☐ Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 876.77 linear feet (ft), 6.11 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 152

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 152

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 152

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW:

☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	54.34713
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 152

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 6834.57 linear feet (ft), 10.45 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Feature ID: 153

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 153

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 153

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00096
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	179.31	linear feet (ft),	3.42	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 154

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 154

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 154

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.20656
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 154

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):
Average Width (ft): [ ]
Average Depth (ft): [ ]

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1523.27 linear feet (ft), 8.15 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 155

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.04265
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 684.68 linear feet (ft), 10.45 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 156

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 156

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 156

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00747
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 156

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft):
Average Depth (ft):
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 724.76 linear feet (ft), 8.00 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 157

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 157

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 157

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	52.66796
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 157

Project waters are ____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are ____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: ____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: ____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): ____
Average Depth (ft): ____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: ____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: ____

Surface Flow is: Discrete and Confined Characteristics: ____
Subsurface Flow: No Explain: ____
☐ Dye (or other) test performed: ____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): ____

☐ Discontinuous? Explain: ____

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 2840.59 linear feet (ft), 22.39 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 158

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 158

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 158

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.02448
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	835.14	linear feet (ft),	4.42	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

- ☐ Office Concurs with data sheets/delineation report

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 159

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 159

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 159

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01472
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 159

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac):

Wetland Type, Explain:

Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: Explain:

Surface Flow is:

Characteristics:

Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- ☐ Wetland Directly Abutting Non-TNW
- ☐ Wetland Not Directly Abutting Non-TNW
  - ☐ Discrete wetland hydrologic connection Explain:
  - ☐ Ecologcal connection Explain:
  - ☐ Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	459.19	linear feet (ft),	3.85	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 16

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 16

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01361
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 143.81 linear feet (ft), 4.24 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

Feature ID: 160

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 160

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 160

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.10231

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	727.35	linear feet (ft),	50.16	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 161

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 161

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 161

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00358
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 543.94 linear feet (ft), 4.87 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 162

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 162

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 162

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.05075
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	698.91	linear feet (ft),	6.88	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 163

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 163

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 163

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.26392
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 163

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):
Average Width (ft): [ ]
Average Depth (ft): [ ]
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1238.65 linear feet (ft), 19.00 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 164

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 164

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.04120
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 164

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):
Average Width (ft): [ ]
Average Depth (ft): [ ]
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

- [ ] Sands
- [ ] Concrete
- [ ] Muck
- [ ] Cobbles
- [x] Gravel
- [ ] Bedrock
- [ ] Substrate - Vegetation

Other, Explain: [ ]

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: [ ]

Surface Flow is: Discrete and Confined Characteristics: [ ]
Subsurface Flow: No Explain: [ ]

- [ ] Dye (or other) test performed: [ ]

Tributary Has (Check all that apply):

- [ ] Bed and Banks
- [x] OHWM (check all the apply): OHWM Indicators:
  - [ ] Clear, natural line impressed on the bank
  - [x] Changes in soil character
  - [ ] Shelving
  - [ ] Vegetation matted down, bent or absent
  - [ ] Leaf litter disturbed or washed away
  - [ ] Sediment deposition
  - [ ] Water staining
  - [x] Presence of litter and debris
  - [ ] Destruction of terrestrial vegetation
  - [ ] Presence of wrack line
  - [ ] Sediment sorting
  - [x] Scour
  - [ ] Multiple observed or predicted flow events
  - [ ] Abrupt change in plant community

Other (list): [ ]

- [ ] Discontinuous? Explain: [ ]

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1688.41 linear feet (ft), 6.42 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 165

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 165

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 165

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00975
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	554.14	linear feet (ft),	19.58	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 166

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 166

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 166

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.07486
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 166

Project waters are ____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are ____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: ____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: ____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): ____
Average Depth (ft): ____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: ____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: ____

Surface Flow is: Discrete and Confined Characteristics: ____
Subsurface Flow: No Explain: ____
☐ Dye (or other) test performed: ____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): ____

☐ Discontinuous? Explain: ____

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 166

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac):

Wetland Type, Explain:

Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: Explain:

Surface Flow is:

Characteristics:

Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- ☐ Wetland Directly Abutting Non-TNW
- ☐ Wetland Not Directly Abutting Non-TNW
  - ☐ Discrete wetland hydrologic connection Explain:
  - ☐ Ecologcal connection Explain:
  - ☐ Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 2195.29 linear feet (ft), 6.56 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Feature ID: 167

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 167

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 167

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00526
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 365.98 linear feet (ft), 4.24 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

Feature ID: 168

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 168

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 168

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.02768
Average Annual Rainfall (in):	10

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 427.71 linear feet (ft), 3.64 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 169

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 169

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 169

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00314
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 169

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft):
Average Depth (ft):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 112.32 linear feet (ft), 2.95 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Feature ID: 17

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 17

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	9.40044
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	5506.48	linear feet (ft),	20.84	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 170

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 170

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00434
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 170

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):
Average Width (ft): [ ]
Average Depth (ft): [ ]
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 577.73 linear feet (ft), 4.41 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 171

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 171

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 171

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00273
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 400.55 linear feet (ft), 4.06 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 172

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 172

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 172

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00188
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 513.25 linear feet (ft), 4.91 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 173

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 173

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.83883
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 173

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):
Average Width (ft): [ ]
Average Depth (ft): [ ]
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: [ ]

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: [ ]

Surface Flow is: Discrete and Confined Characteristics: [ ]
Subsurface Flow: No Explain: [ ]
☐ Dye (or other) test performed: [ ]

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): [ ]

☐ Discontinuous? Explain: [ ]

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac):

Wetland Type, Explain:

(c) Wetland Adjacency Determination with Non-TNW:

- ☐ Wetland Directly Abutting Non-TNW
- ☐ Wetland Not Directly Abutting Non-TNW
  - ☐ Discrete wetland hydrologic connection Explain:
  - ☐ Ecologcal connection Explain:
  - ☐ Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1300.75 linear feet (ft), 8.02 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 174

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 174

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 174

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.07130
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 819.88 linear feet (ft), 13.84 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

Feature ID: 175

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 175

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 175

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.13689

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1095.97 linear feet (ft), 7.99 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 176

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 176

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 176

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.03969
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 176

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):
Average Width (ft): [ ]
Average Depth (ft): [ ]
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	575.82	linear feet (ft),	9.16	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Feature ID: 177

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 177

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 177

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01017
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 557.70 linear feet (ft), 4.61 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 178

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 178

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 178

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.06171
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 178

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 634.45 linear feet (ft), 6.07 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 179

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 179

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 179

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00483
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 179

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):
Average Width (ft): [ ]
Average Depth (ft): [ ]
Average Side Slopes: 3:1

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 532.52 linear feet (ft), 4.91 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.04048
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 2522.58 linear feet (ft), 6.66 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 180

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 180

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 180

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.36711
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 180

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac):

Wetland Type, Explain:

Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: Explain:

Surface Flow is:

Characteristics:

Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- ☐ Wetland Directly Abutting Non-TNW
- ☐ Wetland Not Directly Abutting Non-TNW
  - ☐ Discrete wetland hydrologic connection Explain:
  - ☐ Ecologcal connection Explain:
  - ☐ Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 2146.30 linear feet (ft), 12.22 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 181

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 181

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 181

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW:

☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00885
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 181

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 328.88 linear feet (ft), 4.92 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

Feature ID: 182

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 182

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 182

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00803
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 453.87 linear feet (ft), 4.82 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 183

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 183

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 183

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.02963
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 183

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 183

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac):

Wetland Type, Explain:

Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: Explain:

Surface Flow is:

Characteristics:

Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- ☐ Wetland Directly Abutting Non-TNW
- ☐ Wetland Not Directly Abutting Non-TNW
  - ☐ Discrete wetland hydrologic connection Explain:
  - ☐ Ecologcal connection Explain:
  - ☐ Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 563.33 linear feet (ft), 4.21 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 184

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 184

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 184

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.
