SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD): July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER: Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 1

State: AZ County/Parish/borough: Pinal City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody: 

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date: 
☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ____________________________ ☐ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary, it is jurisdictional regardless of whether or not the tributary is a perennial RPW.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.10170
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0
   (ii) Physical Characteristics:
      (a) Relationship with TNW
         ☐ Tributary flows directly to TNW
         ☑ Tributary flows through _______ tributaries before entering TNW
         Project waters are _______ (or more) river miles from TNW
Project waters are river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics
Tributary is: Natural Explain:
Tributary properties with respect to top of bank (estimate):
- Average Width (ft):
- Average Depth (ft):
- Average Side Slopes: 3:1
Primary tributary substrate composition (check all that apply):
- Silts
- Sands
- Concrete
- Gravel
- Bedrock
- Substrate - Vegetation
- Other, Explain:
Tributary Condition/ Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:
Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume:
Surface Flow is: Discrete and Confined Characteristics:
Subsurface Flow: No Explain:
Dye (or other) test performed:
Tributary Has (Check all that apply):
- Bed and Banks
- OHWM (check all the apply): OHWM Indicators:
  - Clear, natural line impressed on the bank
  - Changes in soil character
  - Shelving
  - Vegetation matted down, bent or absent
  - Leaf litter disturbed or washed away
  - Sediment deposition
  - Water staining
- Presence of litter and debris
- Destruction of terrestrial vegetation
- Presence of wrack line
- Sediment sorting
- Scour
- Multiple observed or predicted flow events
- Abrupt change in plant community
Other (list):
- Discontinuous? Explain:
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

- [ ] High tide line indicated by:
- [ ] Mean High water Mark indicated by:
- [ ] oil or scum line along shore objects
- [ ] fine shell or debris deposits (foreshore)
- [ ] physical markings/characteristics
- [ ] tidal gauges
- [ ] other

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Habitat for:

- [ ] Federally Listed Species Explain findings:
- [ ] Fish/Spawn Areas Explain findings:
- [ ] Other environmentally -sensitive species Explain findings:
- [ ] Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

- Wetland Size (ac):
- Wetland Type, Explain:
- Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

- Wetland Flow is:
- Surface Flow is:

Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- [ ] Wetland Directly Abutting Non-TNW
- [ ] Wetland Not Directly Abutting Non-TNW

- Discrete wetland hydrologic connection Explain:
- Ecological connection Explain:
- Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:
(ii) Chemical Characteristics:
Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):
- Riparian Buffer Characteristics (type, average width): 
- Vegetation type/percent cover. Explain:
Habitat for:
- Federally Listed Species Explain:
- Fish/Spawn Areas Explain:
- Other environmentally-sensitive species Explain:
- Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)
All wetland(s) being considered in cumulative analysis: 
Wetland acres in total being considered in cumulative analysis: 
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.
Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:
This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

<table>
<thead>
<tr>

3. Non-RPWs that flow directly or indirectly into TNWs.

| Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c. |
| Provide estimates of jurisdictional waters within the review area (check all that apply): |
| Length (Linear Feet): | Width (feet): | Acres: |

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

| Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands. |
| Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW: |
| Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW: |
| Provide acreage estimates for jurisdictional wetland in the review area: Acres: |

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

| Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C. |
| Provide acreage estimates for jurisdictional wetland in the review area: Acres: |

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Provide estimates for jurisdictional wetland in the review area (in acres):

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): _______ Acres: _______

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- [ ] Non wetland-Waters (i.e., rivers, streams): linear feet: _______ width (ft): _______
- [ ] Other Non-wetland Waters MBR acres: _______
- [ ] Wetlands MBR acres: _______

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- [ ] Non-wetland waters 788.96 linear feet (ft), 3.31 width (ft)
- [ ] Other waters acres
- [ ] Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

**SECTION II: SUMMARY OF FINDINGS**

**A. RHA SECTION 10 DETERMINATION OF JURISDICTION**

There **Are No** "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

- [ ] Waters subject to the ebb and flow of the tide.
- [ ] Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

**B. CWA SECTION 404 DETERMINATION OF JURISDICTION**

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):
      - [ ] TNWs (new)
      - [ ] Wetlands adjacent to TNWs
      - [ ] Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      - [ ] Non-RPWs that flow directly or indirectly into TNWs
      - [ ] Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      - [ ] Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      - [ ] Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      - [ ] Impoundments of jurisdictional waters
      - [ ] Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in review area
      - Non-Wetlands waters Linear Feet Width (ft) and/or Acres
      - Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

   - [ ] Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

     **Explain:** Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: □ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.00502
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0
   (ii) Physical Characteristics:
      (a) Relationship with TNW
         □ Tributary flows directly to TNW
         ☑ Tributary flows through 4 tributaries before entering TNW
         Project waters are 30 (or more) river miles from TNW
Feature ID: 10

Project waters are river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:

Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft):
Average Depth (ft):
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downstream flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

**SECTION II: SUMMARY OF FINDINGS**

**A. RHA SECTION 10 DETERMINATION OF JURISDICTION**

There **Are No** "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

- **☐ Waters subject to the ebb and flow of the tide.**
- **☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.**

**B. CWA SECTION 404 DETERMINATION OF JURISDICTION**

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. **Waters of the U.S.**
   
   **a. Indicate presence of water of U.S. in review area (Check all the apply):**
   
   - **☐ TNWs (new)**
   - **☐ Wetlands adjacent to TNWs**
   - **☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs**
   - **☐ Non-RPWs that flow directly or indirectly into TNWs**
   - **☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs**
   - **☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs**
   - **☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs**
   - **☐ Impoundments of jurisdictional waters**
   - **☐ Isolated (interstate or intrastate) waters, including isolated wetlands**

   **b. Identify (estimate) size of waters of the U.S. in the review area**
   
   - Non-Wetlands waters [ ] Linear Feet [ ] Width (ft) and/or [ ] Acres
   - Wetlands Acres: [ ]

   **c. Limits (boundaries) of Jurisdiction based on:**

2. **Non-Regulated Waters/Wetlands (check if applicable):**

   - **☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:**

   Explain: **Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.**
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. **TNW**
   - Identify TNW: ____________________________
   - ☐ Vegetation
   - Summarize rationale supporting determination:

2. **Wetland adjacent to TNW**
   - Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
      - Watershed Size (sq mi): 49650
      - Drainage Area (sq mi): 0.50007
      - Average Annual Rainfall (in): 10
      - Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:
      (a) Relationship with TNW
         - ☐ Tributary flows directly to TNW
         - ☑ Tributary flows through 4 tributaries before entering TNW
         - Project waters are 30 (or more) river miles from TNW
Project waters are river Miles from tributary to RPW:  
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:  
Project waters are aerial (straight) miles from tributary to RPW:  
Project waters cross or serve as state boundaries. Explain:  
Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

### (b) General Tributary Characteristics

<table>
<thead>
<tr>
<th>Tributary is:</th>
<th>Natural</th>
<th>Explain:</th>
</tr>
</thead>
</table>

Tributary properties with respect to top of bank (estimate):

| Average Width (ft): |  |
| Average Depth (ft): |  |
| Average Side Slopes: | 3:1 |

Primary tributary substrate composition (check all that apply):

- Other environmentally-sensitive species Explain findings: __________________________
- Aquatic/Wildlife diversity Explain: __________________________

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

- Wetland Size (ac): __________________________
- Wetland Type, Explain: __________________________
- Wetland Quality, Explain: __________________________

Project Wetlands Cross or Serve as State Boundaries, Explain: __________________________

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: __________________________
Surface Flow is: __________________________

Characteristics: __________________________

Subsurface Flow: __________________________
Explain Findings: __________________________

(c) Wetland Adjacency Determination with Non-TNW:

- Wetland Directly Abutting Non-TNW
- Wetland Not Directly Abutting Non-TNW
  - Discrete wetland hydrologic connection Explain: __________________________
  - Ecological connection Explain: __________________________
  - Separated by berm/barrier Explain: __________________________

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW: __________________________
Project Wetlands: Aerial Miles from TNW: __________________________
Flow is From: __________________________

Estimate approximate Location of Wetland within Floodplain: __________________________
(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).

Explain

Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

☐ Riparian Buffer   Characteristics (type, average width):

☐ Vegetation   type/percent cover. Explain:

Habitat for:

☐ Federally Listed Species   Explain:

☐ Fish/Spawn Areas   Explain:

☐ Other environmentally-sensitive species   Explain:

☐ Aquatic/Wildlife Diversity   Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downstream flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage...
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands.  Check all that apply and provide size estimates in review area:

- [ ] TNWs 
  - Linear Feet: _ Width (ft): _ TNW Acres _

- [ ] Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

- [ ] Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

- [ ] Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

  - Provide estimates for jurisdictional waters in the review area (check all that apply):
    - [ ] Tributary waters 
      - Linear Feet: _ Width (ft): _
    - [ ] Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

- [ ] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

  Provide estimates of jurisdictional waters within the review area (check all that apply):

  - Length (Linear Feet): _ Width (ft): _ Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

- [ ] Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

  - [ ] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

  - [ ] Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

  Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

- [ ] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

  Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet):  
Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams):  linear feet:  width (ft):  
☐ Other Non-wetland Waters MBR acres:  
☐ Wetlands MBR acres:  

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☐ Non-wetland waters  linear feet (ft),  width (ft) 
☐ Other waters  acres 
☐ Wetlands  acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☐ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION  
There are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.
☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION  
There are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters  Linear Feet Width (ft) and/or Acres
      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
   ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1; otherwise, see Section III.B below.

1. TNW
   - Identify TNW: [ ]
   - Vegetation: [ ]

   Summarize rationale supporting determination:

2. Wetland adjacent to TNW

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:
   - Watershed Size (sq mi): 49650
   - Drainage Area (sq mi): 0.12144
   - Average Annual Rainfall (in): 10
   - Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:

   (a) Relationship with TNW
   - [ ] Tributary flows directly to TNW
   - [x] Tributary flows through 4 tributaries before entering TNW
   - Project waters are 30 (or more) river miles from TNW
Project waters are river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft):
Average Depth (ft):
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- [ ] Silts
- [ ] Sands
- [ ] Concrete
- [ ] Muck
- [ ] Cobbles
- [ ] Gravel
- [ ] Substrate - Vegetation
- Other, Explain:

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain:]
Stable.

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

Tributary Geometry: Relatively Straight

Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:
   - TNWs
   - Linear Feet: Width (ft): TNW Acres
   - Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs
   - Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:
   - Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
     Provide estimates for jurisdictional waters in the review are (check all that apply):
     - Tributary waters Linear Feet: Width (Ft).
     - Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.
   - Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.
   - Provide estimates of jurisdictional waters within the review area (check all that apply):
     Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.
   - Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
     - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:
       Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW
   - Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
     Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- □ Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
- □ Other Non-wetland Waters MBR acres:
- □ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- ✓ Non-wetland waters 1676.98 linear feet, 6.54 width (ft)
- □ Other waters acres
- □ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- ✓ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.
- ✓ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

SECTION II: SUMMARY OF FINDINGS
A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.
☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters Linear Feet Width (ft) and/or Acres
      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
   ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

   Identify TNW:  

   Summarize rationale supporting determination:

2. Wetland adjacent to TNW

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e., tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

   | Watershed Size (sq mi): | 49650 |
   | Drainage Area (sq mi): | 0.02546 |
   | Average Annual Rainfall (in): | 10 |
   | Average Annual Snowfall (in): | 0 |

   (ii) Physical Characteristics:

   (a) Relationship with TNW

   ☑ Tributary flows directly to TNW

   Tributaries before entering TNW

   Project waters are 30 (or more) river miles from TNW.

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

### D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

#### 1. TNWs and Adjacent Wetlands
Check all that apply and provide size estimates in review area:

<table>
<thead>
<tr>
<th>TNWs</th>
<th>Linear Feet:</th>
<th>Width (ft):</th>
<th>TNW Acres</th>
</tr>
</thead>
<tbody>
<tr>
<td>Wetlands adjacent to TNWs:</td>
<td>Acres:</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

#### 2. RPWs that flow directly or indirectly into TNWs

- Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

- tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

  Provide estimates for jurisdictional waters in the review area (check all that apply):

<table>
<thead>
<tr>
<th>Tributary waters</th>
<th>Linear Feet:</th>
<th>Width (Ft):</th>
</tr>
</thead>
<tbody>
<tr>
<td>Other non-wetland waters:</td>
<td>Acres:</td>
<td></td>
</tr>
</tbody>
</table>

#### 3. Non-RPWs that flow directly or indirectly into TNWs.

- Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.C.

  Provide estimates of jurisdictional waters within the review area (check all that apply):

<table>
<thead>
<tr>
<th>Length (Linear Feet):</th>
<th>Width (feet):</th>
<th>Acres:</th>
</tr>
</thead>
</table>

#### 4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

- Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
  - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

  Provide acreage estimates for jurisdictional wetland in the review area: Acres: |

- Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:

  Provide acreage estimates for jurisdictional wetland in the review area: Acres: |

#### 5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

- Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

  Provide acreage estimates for jurisdictional wetland in the review area: Acres: |

#### 6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
☐ Other Non-wetland Waters MBR acres:
☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☐ Non-wetland waters linear feet (ft), width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:
This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 103

State: AZ  County/Parish/borough: Pinal County  City: N/A

Center coordinates of site: Lat. 32.8482°N  Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☐ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date: 
☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There ☐ Are ☑ "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There ☐ Are ☑ "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands
   
   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters Linear Feet Width (ft) and/or Acres
      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aqueous resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ____________________________ □ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting RPW, the wetland is "adjacent" to the tributary.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 1.39426
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:

   (a) Relationship with TNW

   □ Tributary flows directly to TNW
   ☑ Tributary flows through 4 tributaries before entering TNW

   Project waters are 30 (or more) river miles from TNW
Feature ID: APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Corps of Engineers

Project waters are river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:

Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft):
Average Depth (ft):
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- Silts
- Cobble
- Bedrock
- Sands
- Concrete
- Gravel
- Substrate - Vegetation
- Muck
- Other, Explain:

Tributary Condition/Stability (e.g., highly eroding, sloughing banks. Explain: Stable.

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

Tributary Geometry: Relatively Straight

Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow

Estimate average number of flow events in review area/year: 2-5

Describe Flow Regime: Ephemeral.

Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined Characteristics:

Subsurface Flow: No Explain:

Dye (or other) test performed:

Tributary Has (Check all that apply):
- Bed and Banks
- OHWM (check all the apply): OHWM Indicators:
  - Clear, natural line impressed on the bank
  - Changes in soil character
  - Shelving
  - Vegetation matted down, bent or absent
  - Leaf litter disturbed or washed away
  - Sediment deposition
  - Water staining
  - Presence of litter and debris
  - Destruction of terrestrial vegetation
  - Presence of wrack line
  - Sediment sorting
  - Scour
  - Multiple observed or predicted flow events
  - Abrupt change in plant community

Other (list):

Discontinuous? Explain:
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:
   - TNWs
   - Linear Feet: Width (ft): TNW Acres
   - Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs
   - Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:
   - Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
     - Provide estimates for jurisdictional waters in the review area (check all that apply):
     - Tributary waters Linear Feet: Width (ft).
     - Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.
   - Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.
     - Provide estimates of jurisdictional waters within the review area (check all that apply):
       - Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.
   - Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
     - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:
       - Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW
   - Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
     - Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):
- Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
- Other Non-wetland Waters MBR acres:
- Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):
- Non-wetland waters linear feet (ft), width (ft)
- Other waters acres
- Wetlands acres

SECTION IV: DATA SOURCES

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "Navigable waters of the U.S.") within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☑ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "Waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):  
   ☐ TNWs (new)
   ☐ Wetlands adjacent to TNWs
   ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
   ☐ Non-RPws that flow directly or indirectly into TNWs
   ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
   ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
   ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
   ☐ Impoundments of jurisdictional waters
   ☐ Isolated (interstate or intrastate) waters, including isolated wetlands
   
   b. Identify (estimate) size of waters of the U.S. in the review area  
   Non-Wetlands waters □ Linear Feet □ Width (ft) and/or □ Acres
   Wetlands Acres: □

   c. Limits (boundaries) of Jurisdiction based on:  

2. Non-Regulated Waters/Wetlands (check if applicable):  
☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:  

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1; only if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ___________________________    ☐ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 0.01283
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0
   
   (ii) Physical Characteristics:
   (a) Relationship with TNW
   ☐ Tributary flows directly to TNW
   ☑ Tributary flows through 4 tributaries before entering TNW
   Project waters are 30 (or more) river miles from TNW
Project waters are river Miles from tributary to RPW:  
Project waters are aerial (straight) miles from tributary to TNW:  
Project waters are aerial (straight) miles from tributary to RPW:  
Project waters cross or serve as state boundaries. Explain:  
Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

### (b) General Tributary Characteristics

<table>
<thead>
<tr>
<th>Tributary is:</th>
<th>Natural</th>
<th>Explain:</th>
</tr>
</thead>
</table>

Tributary properties with respect to top of bank (estimate):

| Average Width (ft): |  |
| Average Depth (ft): |  |
| Average Side Slopes: | 3:1 |

Primary tributary substrate composition (check all that apply):

- [ ] Silts
- [ ] Sands
- [ ] Concrete
- [ ] Muck
- [ ] Gravel
- [ ] Substrate - Vegetation

Other, Explain:  

Tributary Condition/ Stability [e.g., highly eroding, sloughing banks. Explain:  
Stable.

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

Tributary Geometry: Relatively Straight

Tributary Gradient (approximate average slope): 1%

### (c) Flow:

Tributary Provides for: Ephemeral Flow

Estimate average number of flow events in review area/year: 2-5

Describe Flow Regime: Ephemeral.

Surface Flow is: Discrete and Confined Characteristics:

Subsurface Flow: No Explain:  

Dye (or other) test performed:  

Tributary Has (Check all that apply):

- [ ] Bed and Banks
- [ ] OHWM (check all the apply): OHWM Indicators:
  - [ ] Clear, natural line impressed on the bank
  - [ ] Changes in soil character
  - [ ] Shelving
  - [ ] Vegetation matted down, bent or absent
  - [ ] Leaf litter disturbed or washed away
  - [ ] Sediment deposition
  - [ ] Water staining

Other (list):  

- [ ] Discontinuous? Explain:  

Dye (or other) test performed:  

Other (list):  

- [ ] Presence of litter and debris
- [ ] Destruction of terrestrial vegetation
- [ ] Presence of wrack line
- [ ] Sediment sorting
- [ ] Scour
- [ ] Multiple observed or predicted flow events
- [ ] Abrupt change in plant community
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

- High tide line indicated by: __________________________
- Mean High water Mark indicated by: ____________________
- oil or scum line along shore objects
- fine shell or debris deposits (foreshore)
- physical markings/characteristics
- tidal gauges
- other

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain: __________________________

Identify Specific Pollutants, if known: __________________________

(iv) Biological Characteristics. Channel supports (check all that apply):

- Riparian Corridor Characteristics: __________________________
- Wetland Fringe Characteristics: __________________________

Habitat for:

- Federally Listed Species Explain findings: __________________________
- Fish/Spawn Areas Explain findings: __________________________
- Other environmentally-sensitive species Explain findings: __________________________
- Aquatic/Wildlife diversity Explain: __________________________

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

- Wetland Size (ac): __________________________
- Wetland Type, Explain: __________________________
- Wetland Quality, Explain: __________________________

Project Wetlands Cross or Serve as State Boundaries, Explain: __________________________

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: __________________________

Surface Flow is: __________________________

Characteristics: __________________________

Subsurface Flow: __________________________

Explain Findings: __________________________

(c) Wetland Adjacency Determination with Non-TNW:

- Wetland Directly Abutting Non-TNW
- Wetland Not Directly Abutting Non-TNW

- Discrete wetland hydrologic connection Explain: __________________________
- Ecological connection Explain: __________________________
- Separated by berm/barrier Explain: __________________________

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW: __________________________

Project Wetlands: Aerial Miles from TNW: __________________________

Flow is From: __________________________

Estimate approximate Location of Wetland within Floodplain: __________________________
(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).

Identify specific pollutants, if known:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- Riparian Buffer, Characteristics: type, average width:
- Vegetation, type/percent cover. Explain:
- Habitat for:
  - Federally Listed Species: Explain:
  - Fish/Spawn Areas: Explain:
  - Other environmentally-sensitive species: Explain:
  - Aquatic/Wildlife Diversity: Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downstream flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage...
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
<th>Linear Feet</th>
<th>Width (ft)</th>
<th>Acres</th>
</tr>
</thead>
<tbody>
<tr>
<td>TNWs</td>
<td>Linear Feet:</td>
<td>Width (ft):</td>
<td>TNW Acres</td>
<td></td>
</tr>
<tr>
<td>Wetlands adjacent to TNWs</td>
<td>Acres:</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

2. RPWs that flow directly or indirectly into TNWs

- Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

- Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

  Provide estimates for jurisdictional waters in the review area (check all that apply):

<table>
<thead>
<tr>
<th>Type</th>
<th>Linear Feet</th>
<th>Width (ft)</th>
<th>Acres</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tributary waters</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Other non-wetland waters</td>
<td>Acres:</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

3. Non-RPWs that flow directly or indirectly into TNWs.

- Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.C.

  Provide estimates of jurisdictional waters within the review area (check all that apply):

<table>
<thead>
<tr>
<th>Length (Linear Feet)</th>
<th>Width (feet)</th>
<th>Acres</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

- Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

  - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

  - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

  Provide acreage estimates for jurisdictional wetland in the review area: Acres: |

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

- Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

  Provide acreage estimates for jurisdictional wetland in the review area: Acres: |

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
- Other Non-wetland Waters MBR acres:
- Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- Non-wetland waters 307.46 linear feet (ft), 3.57 width (ft)
- Other waters acres
- Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.
- Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☒ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):

   ☐ TNWs (new)
   ☐ Wetlands adjacent to TNWs
   ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
   ☐ Non-RPWs that flow directly or indirectly into TNWs
   ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
   ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
   ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
   ☐ Impoundments of jurisdictional waters
   ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area

   Non-Wetlands waters Linear Feet Width (ft) and/or Acres

   Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ___________________________  □ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:
   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 0.02385
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:
   □ Tributary flows directly to TNW
   □ Tributary flows through _______ tributaries before entering TNW
     Project waters are _______ river miles from TNW

   (a) Relationship with TNW
(b) General Tributary Characteristics

Tributary is: Natural

Tributary properties with respect to top of bank (estimate):
- Average Width (ft):
- Average Depth (ft):
- Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- Silts
- Sands
- Concrete
- Muck
- Gravel
- Substrate - Vegetation
- Other, Explain: 

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

Tributary Geometry: Relatively Straight

Tributary Gradient (approximate average slope): 1%

(c) Flow:

3. Characteristics of all wetlands adjacent to the tributary (if any)
All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage...
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

- TNWs: Linear Feet: __________ Width (ft): __________ TNW Acres __________
- Wetlands adjacent to TNWs: Acres: __________

2. RPWs that flow directly or indirectly into TNWs

- Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial: __________
- Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: __________
  Provide estimates for jurisdictional waters in the review area (check all that apply):
  - Tributary waters: Linear Feet: __________ Width (ft): __________
  - Other non-wetland waters: Acres: __________

3. Non-RPWs that flow directly or indirectly into TNWs.

- Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.
  Provide estimates of jurisdictional waters within the review area (check all that apply):
  Length (Linear Feet): __________ Width (feet): __________ Acres: __________

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

- Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
  - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW: __________
  - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW: __________
  Provide acreage estimates for jurisdictional wetland in the review area: Acres: __________

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

- Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
  Provide acreage estimates for jurisdictional wetland in the review area: Acres: __________

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): ___________ Acres: ___________

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: ___________ width (ft): ___________
☐ Other Non-wetland Waters MBR acres: ___________
☐ Wetlands MBR acres: ___________

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☐ Non-wetland waters linear feet (ft), ___________ width (ft): ___________
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:
SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)

July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER

Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION:

Drainage Feature 106

State: AZ    County/Parish/borough: Pinal County

City: N/A

Center coordinates of site: Lat. 32.8482°N    Long. -111.2599°W

Name of nearest waterbody: Gila River between Powers Butte and Gillespie Dam

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:

Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☐ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date: 

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):

      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters

      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area

      Non-Wetlands waters  

      Linear Feet  Width (ft) and/or  Acres

      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

   ☐ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

      Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1; only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ☐ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.55555
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0
   (ii) Physical Characteristics:
      (a) Relationship with TNW
         ☐ Tributary flows directly to TNW
         ☑ Tributary flows through 4 tributaries before entering TNW
         Project waters are 30 (or more) river miles from TNW
 APPROVED JURISDICTIONAL DETERMINATION FORM  
U.S Army Corps of Engineers  

Feature ID: 106  

Project waters are river Miles from tributary to RPW: 
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW: 
Project waters are aerial (straight) miles from tributary to RPW: 
Project waters cross or serve as state boundaries. Explain: 

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River. 

(b) General Tributary Characteristics  
Tributary is: Natural Explain: 

Tributary properties with respect to top of bank (estimate): 
Average Width (ft): 
Average Depth (ft): 
Average Side Slopes: 3:1 
Primary tributary substrate composition (check all that apply):  
- [ ] Silts  
- [ ] Sands  
- [ ] Concrete  
- [ ] Muck  
- [ ] Cobbles  
- [ ] Gravel  
- [ ] Substrate - Vegetation  
- Other, Explain: 

Tributary Condition/ Stability [e.g., highly eroding, sloughing banks. Explain: Stable. 
Presence of Run/Riffle/Pool Complexes. Explain: Not present. 
Tributary Geometry: Relatively Straight 
Tributary Gradient (approximate average slope): 1% 

(c) Flow:  
Tributary Provides for: Ephemeral Flow 
Estimate average number of flow events in review area/year: 2-5 
Describe Flow Regime: Ephemeral. 
Other Information on Duration and Volume: 

Surface Flow is: Discrete and Confined Characteristics: 
Subsurface Flow: No Explain: 
- [ ] Dye (or other) test performed: 

Tributary Has (Check all that apply):  
- [ ] Bed and Banks

- Fish/Spawn Areas   Explain:
- Other environmentally-sensitive species   Explain:
- Aquatic/Wildlife Diversity   Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Conclusions are generally drawn considering the following situations, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

   Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

   This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: __________ Width (ft): __________ TNW Acres __________

☐ Wetlands adjacent to TNWs: Acres: __________

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review area (check all that apply):

☐ Tributary waters Linear Feet: __________ Width (Ft):

☐ Other non-wetland waters: Acres: __________

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): __________ Width (feet): __________ Acres: __________

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally”. Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:

Provide acreage estimates for jurisdictional wetland in the review area: Acres: __________

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres: __________

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Provide estimates for jurisdictional wetland in the review area (in acres):

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: ___________ width (ft): ___________
☐ Other Non-wetland Waters MBR acres: ___________
☐ Wetlands MBR acres: ___________

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☐ Non-wetland waters 715.19 linear feet (ft), 10.78 width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  
July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  
Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION:  
Drainage Feature 107

State: AZ  
County/Parish/borough: Pinal County  
City: N/A

Center coordinates of site:  
Lat. 32.8482°N  
Long. -111.2599°W

Name of nearest waterbody:  
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☐ Check if map/diagram of review are are available upon request
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)
☐ Office (Desk) Determination. Date:  
☐ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters Linear Feet Width (ft) and/or Acres  
      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
   ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:  
   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
Identify TNW: 
☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if
the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus
evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus
evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the
review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary
with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section
III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus
exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

<table>
<thead>
<tr>
<th>Watershed Size (sq mi):</th>
<th>49650</th>

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

□ TNWs Linear Feet: Width (ft): TNW Acres
□ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

□ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

□ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

   Provide estimates for jurisdictional waters in the review area (check all that apply):
   □ Tributary waters Linear Feet: Width (Ft).
   □ Other non-wetland waters:

3. Non-RPWs that flow directly or indirectly into TNWs.

□ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.C.

Provide estimates of jurisdictional waters within the review area (check all that apply):
Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

□ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
   □ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

   □ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

   Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

□ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): _______  Acres: _______

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters
Explain finding of no Significant Nexus:  See Section IIIC.2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams):  linear feet: _______  width (ft): _______
☐ Other Non-wetland Waters MBR acres: _______
☐ Wetlands MBR acres: _______

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☐ Non-wetland waters  590.57 linear feet (ft),  9.25 width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters Linear Feet Width (ft) and/or Acres
      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
   ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ____________________________ □ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 0.02276
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0

(ii) Physical Characteristics:

   (a) Relationship with TNW

   □ Tributary flows directly to TNW
   ✓ Tributary flows through ___ tributaries before entering TNW

   Project waters are ___ (or more) river miles from TNW
Project waters are river Miles from tributary to RPW: 
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW: 
Project waters are aerial (straight) miles from tributary to RPW: 
Project waters cross or serve as state boundaries. Explain: 

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: 

Tributary properties with respect to top of bank (estimate):
Average Width (ft): 
Average Depth (ft): 
Average Side Slopes: 3:1 

Primary tributary substrate composition (check all that apply):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

- TNWs
  - Linear Feet: __________________ Width (ft): __________ TNW Acres __________
- Wetlands adjacent to TNWs: Acres: __________

2. RPWs that flow directly or indirectly into TNWs

- Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial:
- Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
  - Provide estimates for jurisdictional waters in the review area (check all that apply):
    - Tributary waters
      - Linear Feet: __________________ Width (ft): __________
    - Other non-wetland waters: Acres: __________

3. Non-RPWs that flow directly or indirectly into TNWs.

- Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.C.
  - Provide estimates of jurisdictional waters within the review area (check all that apply):
    - Length (Linear Feet): __________________ Width (feet): __________ Acres: __________

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

- Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
  - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
  - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW
  - Provide acreage estimates for jurisdictional wetland in the review area: Acres: __________

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

- Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
  - Provide acreage estimates for jurisdictional wetland in the review area: Acres: __________

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres): 

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet):  

Acres:  

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- [ ] Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft): 
- [ ] Other Non-wetland Waters MBR acres: 
- [ ] Wetlands MBR acres: 

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- [ ] Non-wetland waters linear feet (ft), width (ft)  
- [ ] Other waters acres  
- [ ] Wetlands acres  

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:  
☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No " navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):

      ☐ TNWs (new)  ☐ Wetlands adjacent to TNWs  ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs  ☐ Non-RPWs that flow directly or indirectly into TNWs  ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs  ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs  ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs  ☐ Impoundments of jurisdictional waters  ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area

      Non-Wetlands waters Linear Feet Width (ft) and/or Acres

      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: [ ] Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.01397
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0
   (ii) Physical Characteristics:
      (a) Relationship with TNW
         □ Tributary flows directly to TNW
         ✓ Tributary flows through □ tributaries before entering TNW
         Project waters are □ river miles from TNW

   (b) Vegetation
      □ Wetland vegetation
      ✓ Aquatic vegetation

   (c) Aquatic stream
      □ Stream is perennial
      ✓ Stream is seasonal
**APPROVED JURISDICTIONAL DETERMINATION FORM**

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural

Tributary properties with respect to top of bank (estimate):

| Average Width (ft): | |
| Average Depth (ft): | |
| Average Side Slopes: | 3:1 |

Primary tributary substrate composition (check all that apply):

- [ ] Silts
- [ ] Sands
- [ ] Concrete
- [ ] Muck
- [X] Cobbles
- [ ] Gravel
- [X] Substrate - Vegetation
- [ ] Other, Explain: Stable.

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.]

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

Tributary Geometry: Relatively Straight

Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow

Estimate average number of flow events in review area/year: 2-5

Describe Flow Regime: Ephemeral.

Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined

Subsurface Flow: No

Dye (or other) test performed: Explain:

Tributary Has (Check all that apply):

- [ ] Bed and Banks
- [X] OHWM (check all the apply): OHWM Indicators:
  - [X] Clear, natural line impressed on the bank
  - [X] Changes in soil character
  - [X] Shelving
  - [X] Vegetation matted down, bent or absent
  - [ ] Leaf litter disturbed or washed away
  - [ ] Sediment deposition
  - [ ] Water staining

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): ______ Acres: ______

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters
Explain finding of no Significant Nexus: See Section III.C.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: ______ width (ft): ______
☐ Other Non-wetland Waters MBR acres: ______
☐ Wetlands MBR acres: ______

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☐ Non-wetland waters 713.24 linear feet (ft), 6.06 width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:
SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  
July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  
Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 11

- State: AZ
- County/Parish/borough: Pinal County
- City: N/A

- Center coordinates of site: Lat. 32.8482°N, Long. -111.2599°W

- Name of nearest waterbody:

- Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
  Gila River between Powers Butte and Gillespie Dam

- Name of watershed or Hydrologic Unit Code (HUC): 15050100

- Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
- Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

- Office (Desk) Determination. Date:
- Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

- There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.
- Waters subject to the ebb and flow of the tide.
- Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

- There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):
      - TNWs (new)
      - Wetlands adjacent to TNWs
      - Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      - Non-RPWs that flow directly or indirectly into TNWs
      - Wetlands directed abutting RPWs that flow directly or indirectly into TNWs
      - Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      - Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      - Impoundments of jurisdictional waters
      - Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area
      - Non-Wetlands waters Linear Feet Width (ft) and/or Acres
      - Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

   - Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
     Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

   Identify TNW: ________________________________  □ Vegetation

   Summarize rationale supporting determination:

2. Wetland adjacent to TNW

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary, that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.02668
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:

      (a) Relationship with TNW

         □ Tributary flows directly to TNW
         ✔ Tributary flows through __4____ tributaries before entering TNW

         Project waters are __30 (or more)____ river miles from TNW
Project waters are river Miles from tributary to RPW:  
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:  
Project waters are aerial (straight) miles from tributary to RPW:  
Project waters cross or serve as state boundaries. Explain:  

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural
Explain:  

Tributary properties with respect to top of bank (estimate):
Average Width (ft):  
Average Depth (ft):  
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- [ ] Silts
- [ ] Sands
- [ ] Concrete
- [ ] Muck
- [ ] Cobble
- [ ] Gravel
- [ ] Substrate - Vegetation
Other, Explain:  

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

Tributary Geometry: Relatively Straight

Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5

Describe Flow Regime: Ephemeral.

Other Information on Duration and Volume:  

Surface Flow is: Discrete and Confined Characteristics:  
Subsurface Flow: No Explain:  

Dye (or other) test performed:  

Tributary Has (Check all that apply):
- [ ] Bed and Banks
- [ ] OHWM (check all the apply): OHWM Indicators:
  - [ ] Clear, natural line impressed on the bank  
  - [ ] Changes in soil character  
  - [ ] Shelving  
  - [ ] Vegetation matted down, bent or absent  
  - [ ] Leaf litter disturbed or washed away  
  - [ ] Sediment deposition  
  - [ ] Water staining  
  - [ ] Presence of litter and debris  
  - [ ] Destruction of terrestrial vegetation  
  - [ ] Presence of wrack line  
  - [ ] Sediment sorting  
  - [ ] Scour  
  - [ ] Multiple observed or predicted flow events  
  - [ ] Abrupt change in plant community  

Other (list):  

Discontinuous? Explain:  

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain: ____________________________

Identify Specific Pollutants, if known: ____________________________

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics: ____________________________

☐ Wetland Fringe Characteristics: ____________________________

Habitat for:

☐ Federally Listed Species Explain findings: ____________________________

☐ Fish/Spawn Areas Explain findings: ____________________________

☐ Other environmentally sensitive species Explain findings: ____________________________

☐ Aquatic/Wildlife diversity Explain: ____________________________

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac): ____________________________

Wetland Type, Explain: ____________________________

Wetland Quality, Explain: ____________________________

Project Wetlands Cross or Serve as State Boundaries, Explain: ____________________________

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: ____________________________ Explain: ____________________________

Surface Flow is: ____________________________

Characteristics: ____________________________

Subsurface Flow: ____________________________ Explain Findings: ____________________________

(c) Wetland Adjacency Determination with Non-TNW:

☐ Wetland Directly Abutting Non-TNW

☐ Wetland Not Directly Abutting Non-TNW

☐ Discrete wetland hydrologic connection Explain: ____________________________

☐ Ecological connection Explain: ____________________________

☐ Separated by berm/barrier Explain: ____________________________

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW: ____________________________

Project Wetlands: Aerial Miles from TNW: ____________________________

Flow is From: ____________________________

Estimate approximate Location of Wetland within Floodplain: ____________________________
(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).

Explain

Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- [ ] Riparian Buffer Characteristics (type, average width):
- [ ] Vegetation type/percent cover. Explain:

Habitat for:
- [ ] Federally Listed Species Explain:
- [ ] Fish/Spawn Areas Explain:
- [ ] Other environmentally-sensitive species Explain:
- [ ] Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis: 

Wetland acres in total being considered in cumulative analysis: 

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

   - TNWs: Linear Feet: Width (ft): TNW Acres
   - Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

   - Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:
   - Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
     - Provide estimates for jurisdictional waters in the review area (check all that apply):
       - Tributary waters: Linear Feet: Width (ft).
       - Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

   - Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

      Provide estimates of jurisdictional waters within the review area (check all that apply):
      - Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

   - Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
     - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:

      Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

   - Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

      Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
☐ Other Non-wetland Waters MBR acres:
☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☐ Non-wetland waters 154.18 linear feet (ft), 4.68 width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters Linear Feet Width (ft) and/or Acres
      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

   ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. **TNW**
   - Identify TNW: 
   - ☐ Vegetation

Summarize rationale supporting determination:

2. **Wetland adjacent to TNW**

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a wetland that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   - **(i) General Area Conditions:**
     - Watershed Size (sq mi): 49650
     - Drainage Area (sq mi): 9.09191
     - Average Annual Rainfall (in): 10
     - Average Annual Snowfall (in): 0
   - **(ii) Physical Characteristics:**
     - ☑ Tributary flows directly to TNW
     - ☐ Tributary flows through 4 tributaries before entering TNW
     - Project waters are 30 (or more) river miles from TNW
Project waters are river Miles from tributary to RPW: [ ]
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW: [ ]
Project waters are aerial (straight) miles from tributary to RPW: [ ]
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: [ ] Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrometric connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage...
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D.

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

   □ TNWs Linear Feet: ____ Width (ft): ____ TNW Acres: ____

   □ Wetlands adjacent to TNWs: Acres: ____

2. RPWs that flow directly or indirectly into TNWs

   □ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial: ____

   □ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: ____

   Provide estimates for jurisdictional waters in the review area (check all that apply):

   □ Tributary waters Linear Feet: ____ Width (ft): ____

   □ Other non-wetland waters: Acres: ____

3. Non-RPWs that flow directly or indirectly into TNWs.

   □ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

   Provide estimates of jurisdictional waters within the review area (check all that apply):

   Length (Linear Feet): ____ Width (feet): ____ Acres: ____

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

   □ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

      □ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW: ____

      □ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW: ____

   Provide acreage estimates for jurisdictional wetland in the review area: Acres: ____

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

   □ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide acreage estimates for jurisdictional wetland in the review area: Acres: ____

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction: 

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): Acres: 

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters
Explain finding of no Significant Nexus: See Section III.C.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft): 
☐ Other Non-wetland Waters MBR acres: 
☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☐ Non-wetland waters linear feet (ft), width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☐ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.
☐ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:
This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  
July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  
Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION:  
Drainage Feature 111

State: AZ  
County/Parish/borough: Pinal  
City: N/A

Center coordinates of site:  
Lat. 32.8482°N  
Long. -111.2599°W

Name of nearest waterbody:  
Gila River between Powers Butte and Gillespie Dam

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:  
This space is not applicable.

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:  
☐ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters Linear Feet Width (ft) and/or Acres
      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. **TNW**
   - Identify TNW: 
   - □ Vegetation
   - Summarize rationale supporting determination:

2. **Wetland adjacent to TNW**
   - Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   - (i) General Area Conditions:
     - Watershed Size (sq mi): 49650
     - Drainage Area (sq mi): 20.86087
     - Average Annual Rainfall (in): 10
     - Average Annual Snowfall (in): 0
   - (ii) Physical Characteristics:
     - □ □ Relationship with TNW
       - [ ] Tributary flows directly to TNW
       - [ ] Tributary flows through [ ] tributaries before entering TNW
       - Project waters are [ ] river miles from TNW
       - [ ] river miles from TNW
Feature ID: 111

Project waters are river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:

Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft):
Average Depth (ft):
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- Silts
- Sands
- Concrete
- Muck
- Cobble
- Gravel
- Substrate - Vegetation
Other, Explain:

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

Tributary Geometry: Relatively Straight

Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow

Estimate average number of flow events in review area/year: 2-5

Describe Flow Regime: Ephemeral.

Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined Characteristics:
Subsurface Flow: No Explain:

Dye (or other) test performed:

Tributary Has (Check all that apply):

- Bed and Banks
- OHWM (check all the apply): OHWM Indicators:
  - Clear, natural line impressed on the bank
  - Changes in soil character
  - Shelving
  - Vegetation matted down, bent or absent
  - Leaf litter disturbed or washed away
  - Sediment deposition
  - Water staining

Other (list):

Discontinuous? Explain:
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

- High tide line indicated by: __________________________
- Mean High water Mark indicated by: __________________________
- oil or scum line along shore objects
- fine shell or debris deposits (foreshore)
- physical markings/characteristics
- tidal gauges
- other

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

- Riparian Corridor Characteristics: __________________________
- Wetland Fringe Characteristics: __________________________

Habitat for:

- Federally Listed Species Explain findings: __________________________
- Fish/Spawn Areas Explain findings: __________________________
- Other environmentally -sensitive species Explain findings: __________________________
- Aquatic/Wildlife diversity Explain: __________________________

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:
- Wetland Size (ac): __________________________
- Wetland Type, Explain: __________________________
- Wetland Quality, Explain: __________________________

Project Wetlands Cross or Serve as State Boundaries, Explain: __________________________

(b) General Flow Relationship with Non-TNW:

- Wetland Flow is: __________________________
- Surface Flow is: __________________________
- Subsurface Flow: __________________________

Characteristics: __________________________

Subsurface Flow: __________________________

Explain Findings: __________________________

(c) Wetland Adjacency Determination with Non-TNW:

- Wetland Directly Abutting Non-TNW
- Wetland Not Directly Abutting Non-TNW
- Discrete wetland hydrologic connection Explain: __________________________
- Ecological connection Explain: __________________________
- Separated by berm/barrier Explain: __________________________

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW: __________________________

Project Wetlands: Aerial Miles from TNW: __________________________

Flow is From: __________________________

Estimate approximate Location of Wetland within Floodplain: __________________________
(ii) Chemical Characteristics:
Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):
- Riparian Buffer  Characteristics (type, average width):
- Vegetation  type/percent cover. Explain:
Habitat for:
- Federally Listed Species  Explain:
- Fish/Spawn Areas  Explain:
- Other environmentally-sensitive species  Explain:
- Aquatic/Wildlife Diversity  Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)
All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION
A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.
Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:
This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: ______ Width (ft): ______ TNW Acres ______

☐ Wetlands adjacent to TNWs: Acres: ______

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial: ______

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: ______

   Provide estimates for jurisdictional waters in the review area (check all that apply):

   ☐ Tributary waters Linear Feet: ______ Width (Ft): ______

   ☐ Other non-wetland waters: Acres: ______

3. Non-RPWS that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.C.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): ______ Width (feet): ______ Acres: ______

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

   ☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW: ______

   ☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW: ______

Provide acreage estimates for jurisdictional wetland in the review area: Acres: ______

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres: ______

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Feature ID: 111

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section III.C.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
- Other Non-wetland Waters MBR acres:
- Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- Non-wetland waters linear feet (ft), width (ft)
- Other waters acres
- Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- [ ] Check if map/diagram of review are are available upon request
- [ ] Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

**SECTION II: SUMMARY OF FINDINGS**

**A. RHA SECTION 10 DETERMINATION OF JURISDICTION**

There **Are No** "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

- [ ] Waters subject to the ebb and flow of the tide.
- [ ] Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

**B. CWA SECTION 404 DETERMINATION OF JURISDICTION**

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   - a. Indicate presence of water of U.S. in review area (Check all the apply):
     - [ ] TNWs (new)
     - [ ] Wetlands adjacent to TNWs
     - [ ] Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
     - [ ] Non-RPWs that flow directly or indirectly into TNWs
     - [ ] Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
     - [ ] Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
     - [ ] Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
     - [ ] Impoundments of jurisdictional waters
     - [ ] Isolated (interstate or intrastate) waters, including isolated wetlands
   - b. Identify (estimate) size of waters of the U.S. in the review area
     - Non-Wetlands waters Linear Feet Width (ft) and/or Acres
     - Wetlands Acres: |
   - c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
   - [ ] Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
     - Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ________________________________  □ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.07497
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0
   (ii) Physical Characteristics:
      (a) Relationship with TNW
         □ Tributary flows directly to TNW
         ✔ Tributary flows through 4 tributaries before entering TNW
         Project waters are 30 (or more) river miles from TNW
**Feature ID:** 112

**U.S Army Corps of Engineers**

Project waters are river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:

Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

**(b) General Tributary Characteristics**

Tributary is: Natural

Tributary properties with respect to top of bank (estimate):
- Average Width (ft):
- Average Depth (ft):
- Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- Silts
- Sands
- Concrete
- Muck
- Gravel
- Substrate - Vegetation
- Other, Explain:

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

Tributary Geometry: Relatively Straight

Tributary Gradient (approximate average slope): 1%

**(c) Flow**

Tributary Provides for: Ephemeral Flow

Estimate average number of flow events in review area/year: 2-5

Describe Flow Regime: Ephemeral.

Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined

Subsurface Flow: No

Dye (or other) test performed:

Tributary Has (Check all that apply):

- Bed and Banks
- OHWM (check all the apply): OHWM Indicators:
  - Clear, natural line impressed on the bank
  - Changes in soil character
  - Shelving
  - Vegetation matted down, bent or absent
  - Leaf litter disturbed or washed away
  - Sediment deposition
  - Water staining
  - Presence of litter and debris
  - Destruction of terrestrial vegetation
  - Presence of wrack line
  - Sediment sorting
  - Scour
  - Multiple observed or predicted flow events
  - Abrupt change in plant community

Other (list):

Discontinuous? Explain:
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

- High tide line indicated by: ____________________________

Surface Flow is: ____________________________ Characteristics: ____________________________
Subsurface Flow: ____________________________ Explain Findings: ____________________________

(c) Wetland Adjacency Determination with Non-TNW:
- Wetland Directly Abutting Non-TNW
- Wetland Not Directly Abutting Non-TNW
  - Discrete wetland hydrologic connection Explain: ____________________________
  - Ecological connection Explain: ____________________________
  - Separated by berm/barrier Explain: ____________________________

(d) Proximity (Relationship) to TNW
Project Wetlands: River Miles from TNW: ____________________________
Project Wetlands: Aerial Miles from TNW: ____________________________
Flow is From: ____________________________
Estimate approximate Location of Wetland within Floodplain: ____________________________
(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).

Explain

Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- [ ] Riparian Buffer Characteristics (type, average width):
- [ ] Vegetation type/percent cover. Explain:

Habitat for:
- [ ] Federally Listed Species Explain:
- [ ] Fish/Spawn Areas Explain:
- [ ] Other environmentally-sensitive species Explain:
- [ ] Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downstream flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review area (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres): ___________

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction: ___________

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): ___________ Acres: ___________

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: ___________ width (ft): ___________
☐ Other Non-wetland Waters MBR acres: ___________
☐ Wetlands MBR acres: ___________

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☐ Non-wetland waters 1182.86 linear feet (ft), 7.26 width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☐ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.
☐ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant
☐ Office Concurs with data sheets/delineation report
☐ Office Does Not Concur with data sheets/delineation report
☐ Data Sheets Prepared by the Corps
☐ Corps Navigable Water Study
☐ US Geological Survey Hydrologic Atlas
☐ USGS NHD Data
☐ USGS 8 and 12 digit HUC Maps
☐ US Geological Survey Map(s) Scale and Quad Name:

SECTION I: BACKGROUND INFORMATION
A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  
July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  
Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION:  
Drainage Feature 113

State: AZ  
County/Parish/borough: Pinal County  
City: N/A

Center coordinates of site: Lat. 32.8482°N  
Long. -111.2599°W

Name of nearest waterbody:  
Gila River between Powers Butte and Gillespie Dam

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:  

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☐ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

SECTION II: SUMMARY OF FINDINGS
A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There ☐ Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.
☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There ☐ Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands
   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters Linear Feet Width (ft) and/or Acres
      Wetlands Acres:
   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
   ☐ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
### SECTION III: CWA ANALYSIS

#### A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1; otherwise, see Section III.B below.

1. **TNW**
   - Identify TNW: [___________]
   - □ Vegetation

   Summarize rationale supporting determination:

2. **Wetland adjacent to TNW**
   - Summarize rationale supporting conclusion that wetland is "adjacent"

#### B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a wetland, the tributary is not a TNW.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. **Characteristics of non-TNWs that flow directly or indirectly into TNW**

   (i) **General Area Conditions:**

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?

• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?

• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage...
2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

<table>

3. Non-RPWs that flow directly or indirectly into TNWs.

| Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c. Provide estimates of jurisdictional waters within the review area (check all that apply): |
|---|---|---|
| Length (Linear Feet): | Width (feet): | Acres: |

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

| Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW: |              |
| Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW: |              |
| Provide acreage estimates for jurisdictional wetland in the review area: | Acres: |

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

| Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C. Provide acreage estimates for jurisdictional wetland in the review area: | Acres: |

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres): 

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction: 

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres: 

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft): 

☐ Other Non-wetland Waters MBR acres: 

☐ Wetlands MBR acres: 

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☐ Non-wetland waters linear feet (ft), width (ft) 

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

Additional Comments to Support JD:
This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  
July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  
Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION:  
Drainage Feature 114

State: AZ  
County/Parish/borough: Pinal County  
City: N/A  

Center coordinates of site: Lat. 32.8482°N  
Long. -111.2599°W

Name of nearest waterbody:  
Gila River between Powers Butte and Gillespie Dam

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:  
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☐ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g. offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:  
☐ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No navigable waters of the U.S. within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No waters of the U.S. within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):

      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area

      Non-Wetlands waters Linear Feet Width (ft) and/or Acres

      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

   ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

   Identify TNW: ____________________________ ☐ Vegetation

   Summarize rationale supporting determination:

2. Wetland adjacent to TNW

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e., tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a wetland that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e., tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 0.02599
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:

      (a) Relationship with TNW

         ☑ Tributary flows directly to TNW
         ☐ Tributary flows through 4 tributaries before entering TNW

         Project waters are 30 (or more) river miles from TNW
Project waters are river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics
Tributary is: Natural
Tributary properties with respect to top of bank (estimate):
Average Width (ft):
Average Depth (ft):
Average Side Slopes: 3:1
Primary tributary substrate composition (check all that apply):
- Silts
- Sands
- Concrete
- Muck
- Cobble
- Gravel
- Substrate - Vegetation
- Other, Explain:

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:
Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume:
Surface Flow is: Discrete and Confined
Subsurface Flow: No
Dye (or other) test performed:

Tributary Has (Check all that apply):
- Bed and Banks
- OHWM (check all the apply): OHWM Indicators:
  - Clear, natural line impressed on the bank
  - Changes in soil character
  - Shelving
  - Vegetation matted down, bent or absent
  - Leaf litter disturbed or washed away
  - Sediment deposition
  - Water staining
  - Presence of litter and debris
  - Destruction of terrestrial vegetation
  - Presence of wrack line
  - Sediment sorting
  - Scour
  - Multiple observed or predicted flow events
  - Abrupt change in plant community
Other (list):
Discontinuous? Explain:
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

- High tide line indicated by: [ ]
- Mean High water Mark indicated by: [ ]
- oil or scum line along shore objects: [ ]
- fine shell or debris deposits (foreshore): [ ]
- physical markings/characteristics: [ ]
- tidal gauges: [ ]
- other: [ ]

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain: [ ]

Identify Specific Pollutants, if known: [ ]

(iv) Biological Characteristics. Channel supports (check all that apply):

- Riparian Corridor Characteristics: [ ]
- Wetland Fringe Characteristics: [ ]

Habitat for:

- Federally Listed Species Explain findings: [ ]
- Fish/Spawn Areas Explain findings: [ ]
- Other environmentally -sensitive species Explain findings: [ ]
- Aquatic/Wildlife diversity Explain: [ ]

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

- Wetland Size (ac): [ ]
- Wetland Type, Explain: [ ]
- Wetland Quality, Explain: [ ]

Project Wetlands Cross or Serve as State Boundaries, Explain: [ ]

(b) General Flow Relationship with Non-TNW:

- Wetland Flow is: Explain: [ ]
- Surface Flow is: [ ]

Characteristics:

- Subsurface Flow: Explain Findings: [ ]

(c) Wetland Adjacency Determination with Non-TNW:

- Wetland Directly Abutting Non-TNW: [ ]
- Wetland Not Directly Abutting Non-TNW: [ ]

- Discrete wetland hydrologic connection Explain: [ ]
- Ecological connection Explain: [ ]
- Separated by berm/barrier Explain: [ ]

(d) Proximity (Relationship) to TNW

- Project Wetlands: River Miles from TNW: [ ]
- Project Wetlands: Aerial Miles from TNW: [ ]

Flow is From: [ ]

Estimate approximate Location of Wetland within Floodplain: [ ]
(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).

Explain

Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- Riparian Buffer  Characteristics (type, average width):
- Vegetation  type/percent cover. Explain:
- Habitat for:
  - Federally Listed Species  Explain:
  - Fish/Spawn Areas  Explain:
  - Other environmentally-sensitive species  Explain:
  - Aquatic/Wildlife Diversity  Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands.  Check all that apply and provide size estimates in review area:

<table>
<thead>
<tr>
<th></th>
<th>TNWs</th>
<th>Linear Feet:</th>
<th>Width (ft):</th>
<th>TNW Acres</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Wetlands adjacent to TNWs:</td>
<td>Acres:</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

2. RPWs that flow directly or indirectly into TNWs

|   | Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial: |
|   | Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: |
|   | Provide estimates for jurisdictional waters in the review area (check all that apply): |
|   | Tributary waters | Linear Feet: | Width (Ft): |
|   | Other non-wetland waters: | Acres: |

3. Non-RPWs that flow directly or indirectly into TNWs.

|   | Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c. |
|   | Provide estimates of jurisdictional waters within the review area (check all that apply): |
|   | Length (Linear Feet): | Width (feet): | Acres: |

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

|   | Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands. |
|   | Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW: |
|   | Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW |
|   | Provide acreage estimates for jurisdictional wetland in the review area: | Acres: |

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

|   | Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C. |
|   | Provide acreage estimates for jurisdictional wetland in the review area: | Acres: |

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
114

Feature ID:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Corps of Engineers

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet):    Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus:  See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams):    linear feet :    width (ft):    
☐ Other Non-wetland Waters MBR    acres:    
☐ Wetlands MBR    acres:    

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☐ Non-wetland waters  1342.19 linear feet (ft),    4.15 width (ft)
☐ Other waters    acres
☐ Wetlands    acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☐ Office (Desk) Determination. Date:  
☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS
A. RHA SECTION 10 DETERMINATION OF JURISDICTION  
There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.  
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION  
There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.  
   a. Indicate presence of water of U.S. in review area (Check all the apply):  
      ☐ TNWs (new)  
      ☐ Wetlands adjacent to TNWs  
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs  
      ☐ Non-RPWs that flow directly or indirectly into TNWs  
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs  
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs  
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs  
      ☐ Impoundments of jurisdictional waters  
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area  
      Non-Wetlands waters Linear Feet Width (ft) and/or Acres  
      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):  
   ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

      Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

   Identify TNW: [ ] Vegetation

   Summarize rationale supporting determination:

2. Wetland adjacent to TNW

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

   | Watershed Size (sq mi): | 49650 |
   | Drainage Area (sq mi): | 0.00117 |
   | Average Annual Rainfall (in): | 10 |
   | Average Annual Snowfall (in): | 0 |

   (ii) Physical Characteristics:

   (a) Relationship with TNW

   [ ] Tributary flows directly to TNW
   [ ] Tributary flows through 4 tributaries before entering TNW

   Project waters are 30 (or more) river miles from TNW

| **Project waters are**: river Miles from tributary to RPW: | [ ] |
| **Project waters are**: 30 (or more) aerial (straight) miles from tributary to TNW: | [ ] |
| **Project waters are**: aerial (straight) miles from tributary to RPW: | [ ] |
| **Project waters cross or serve as state boundaries. Explain**: | [ ] |
| **Identify flow route to TNW**: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River. |

### (b) General Tributary Characteristics

**Tributary is**: Natural

**Tributary properties with respect to top of bank (estimate):**

- **Average Width (ft):** [ ]
- **Average Depth (ft):** [ ]
- **Average Side Slopes**: 3:1

**Primary tributary substrate composition (check all that apply):**

- Silts
- Sands
- Concrete
- Gravel
- Substrate - Vegetation
- Muck
- Other, Explain: [ ]

**Tributary Condition/Stability** [e.g., highly eroding, sloughing banks. Explain]: Stable.

**Presence of Run/Riffle/Pool Complexes. Explain**: Not present.

**Tributary Geometry**: Relatively Straight

**Tributary Gradient (approximate average slope)**: 1%

### (c) Flow:

**Tributary Provides for**: Ephemeral Flow

**Estimate average number of flow events in review area/year**: 2-5

**Describe Flow Regime**: Ephemeral.

**Other Information on Duration and Volume**: [ ]

**Surface Flow is**: Discrete and Confined

**Subsurface Flow**: No

**Dye (or other) test performed**: [ ]

**Tributary Has (Check all that apply):**

- Bed and Banks
- **OHWM (check all the apply): OHWM Indicators:**
  - Clear, natural line impressed on the bank
  - Changes in soil character
  - Shelving
  - Vegetation matted down, bent or absent
  - Leaf litter disturbed or washed away
  - Sediment deposition
  - Water staining
  - Presence of litter and debris
  - Destruction of terrestrial vegetation
  - Presence of wrack line
  - Sediment sorting
  - Scour
  - Multiple observed or predicted flow events
  - Abrupt change in plant community

**Other (list):** [ ]

**Discontinuous? Explain**: [ ]
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

- High tide line indicated by: 
- Mean High water Mark indicated by: 
- Oil or scum line along shore objects 
- Fine shell or debris deposits (foreshore) 
- Physical markings/characteristics 
- Tidal gauges 
- Other 

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain: 

Identify Specific Pollutants, if known: 

(iv) Biological Characteristics. Channel supports (check all that apply):

- Riparian Corridor Characteristics: 
- Wetland Fringe Characteristics: 

Habitat for:

- Federally Listed Species Explain findings: 
- Fish/Spawn Areas Explain findings: 
- Other environmentally sensitive species Explain findings: 
- Aquatic/Wildlife diversity Explain: 

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

- Wetland Size (ac): 
- Wetland Type, Explain: 
- Wetland Quality, Explain: 

Project Wetlands Cross or Serve as State Boundaries, Explain: 

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: Explain: 

Surface Flow is: 

Characteristics: 

Subsurface Flow: Explain Findings: 

(c) Wetland Adjacency Determination with Non-TNW:

- Wetland Directly Abutting Non-TNW 
- Wetland Not Directly Abutting Non-TNW

- Discrete wetland hydrologic connection Explain: 
- Ecological connection Explain: 
- Separated by berm/barrier Explain: 

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW: 

Project Wetlands: Aerial Miles from TNW: 

Flow is From: 

Estimate approximate Location of Wetland within Floodplain: 
(ii) Chemical Characteristics:
Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- [ ] Riparian Buffer Characteristics (type, average width):
- [ ] Vegetation type/percent cover. Explain:
Habitat for:
- [ ] Federally Listed Species Explain:
- [ ] Fish/Spawn Areas Explain:
- [ ] Other environmentally-sensitive species Explain:
- [ ] Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:
   - TNWs Linear Feet: Width (ft): TNW Acres
   - Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs
   - Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:
   - Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
     - Provide estimates for jurisdictional waters in the review area (check all that apply):
       - Tributary waters Linear Feet: Width (Ft).
       - Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.
   - Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.
   - Provide estimates of jurisdictional waters within the review area (check all that apply):
     - Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.
   - Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
     - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:
       - Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW
   - Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
   - Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): ______ Acres: ______

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- Non wetland-Waters (i.e., rivers, streams): linear feet: ______ width (ft): ______

- Other Non-wetland Waters MBR acres: ______

- Wetlands MBR acres: ______

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- [x] Non-wetland waters ______ linear feet (ft), ______ width (ft)

- Other waters ______ acres

- Wetlands ______ acres

SECTION IV: DATA SOURCES

**SECTION II: SUMMARY OF FINDINGS**

A. RHA SECTION 10 DETERMINATION OF JURISDICTION  

There **No** "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

- Waters subject to the ebb and flow of the tide.
- Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION  

There **No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):

      - Wetlands adjacent to TNWs
      - Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      - Non-RPWs that flow directly or indirectly into TNWs
      - Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      - Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      - Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      - Impoundments of jurisdictional waters
      - Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in review area

      | Non-Wetlands waters | Linear Feet | Width (ft) and/or Acres |
      |---------------------|-------------|-------------------------|
      | Wetlands Acres:     |             |                         |

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

   - Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

     | Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW. |
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ____________________________ □ Vegetation

   Summarize rationale supporting determination:

2. Wetland adjacent to TNW

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:
       - Watershed Size (sq mi): 49650
       - Drainage Area (sq mi): 0.00744
       - Average Annual Rainfall (in): 10
       - Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:

      (a) Relationship with TNW

      □ Tributary flows directly to TNW
      ✓ Tributary flows through 4 tributaries before entering TNW

      Project waters are 30 (or more) river miles from TNW
(b) General Tributary Characteristics

Tributary is: Natural
Explain:

Tributary properties with respect to top of bank (estimate):
- Average Width (ft): [ ]
- Average Depth (ft): [ ]
- Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- Silts [ ]
- Sands [ ]

- [ ] Vegetation  type/percent cover. Explain:

Habitat for:

- [ ] Federally Listed Species  Explain:
- [ ] Fish/Spawn Areas  Explain:
- [ ] Other environmentally-sensitive species  Explain:
- [ ] Aquatic/Wildlife Diversity  Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

   - [ ] TNWs Linear Feet: __________ Width (ft): __________ TNW Acres __________
   - [ ] Wetlands adjacent to TNWs: Acres: __________

2. RPWs that flow directly or indirectly into TNWs

   - [ ] Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial: __________
   - [ ] Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: __________
     Provide estimates for jurisdictional waters in the review area (check all that apply):
     - [ ] Tributary waters Linear Feet: __________ Width (ft): __________ Acres: __________
     - [ ] Other non-wetland waters: Acres: __________

3. Non-RPWs that flow directly or indirectly into TNWs.

   - [ ] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.C.
     Provide estimates of jurisdictional waters within the review area (check all that apply):
     Length (Linear Feet): __________ Width (feet): __________ Acres: __________

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

   - [ ] Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW: __________
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW: __________
     Provide acreage estimates for jurisdictional wetland in the review area: Acres: __________

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

   - [ ] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
     Provide acreage estimates for jurisdictional wetland in the review area: Acres: __________

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): ________  Acres: ________

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- [ ] Non wetland-Waters (i.e., rivers, streams): linear feet: ________  width (ft): ________
- [ ] Other Non-wetland Waters MBR acres: ________
- [ ] Wetlands MBR acres: ________

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- [✓] Non-wetland waters 281.34 linear feet (ft), 5.45 width (ft)
- [ ] Other waters acres
- [ ] Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- [✓] Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

[ ] Office (Desk) Determination. Date: 
[ ] Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There [Are No] "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

[ ] Waters subject to the ebb and flow of the tide.
[ ] Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There [Are No] "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):
   [ ] TNWs (new)
   [ ] Wetlands adjacent to TNWs
   [ ] Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
   [ ] Non-RPWS that flow directly or indirectly into TNWs
   [ ] Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
   [ ] Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
   [ ] Wetlands adjacent to non-RPWS that flow directly or indirectly into TNWs
   [ ] Impoundments of jurisdional waters
   [ ] Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area
   Non-Wetlands waters Linear Feet Width (ft) and/or Acres
   Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

   [ ] Potentially jurisdional waters and/or wetlands were assessed within the review area and determined not to be jurisdional:
   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

   Identify TNW: ____________________________ □ Vegetation

   Summarize rationale supporting determination:

2. Wetland adjacent to TNW

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary, that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.01562
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:

      □ Relationship with TNW

      ☑ Tributary flows through 4 tributaries before entering TNW

      Project waters are 30 (or more) river miles from TNW
Project waters are [ ] river Miles from tributary to RPW:
Project waters are [ ] 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics
Tributary is: [ ] Natural Explain: 

Tributary properties with respect to top of bank (estimate):
Average Width (ft): [ ]
Average Depth (ft): [ ]
Average Side Slopes: [ ]

Primary tributary substrate composition (check all that apply):
- [ ] Silts
- [ ] Sands
- [ ] Concrete
- [ ] Muck
- [ ] Cobble
- [ ] Gravel
- [ ] Substrate - Vegetation
- Other, Explain: [ ]

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: [ ]
Stable.

Presence of Run/Riffle/Pool Complexes. Explain: [ ]
Not present.

Tributary Geometry: [ ] Relatively Straight

Tributary Gradient (approximate average slope): [ ]

(c) Flow:
Tributary Provides for: [ ] Ephemeral Flow

Estimate average number of flow events in review area/year: [ ]

Describe Flow Regime: [ ] Ephemeral.

Other Information on Duration and Volume:

Surface Flow is: [ ] Discrete and Confined Characteristics: [ ]
Subsurface Flow: [ ] No Explain: [ ]

Dye (or other) test performed:

Tributary Has (Check all that apply):
- [ ] Bed and Banks
- [ ] OHWM (check all the apply): OHWM Indicators:
  - [ ] Clear, natural line impressed on the bank
  - [ ] Changes in soil character
  - [ ] Shelving
  - [ ] Vegetation matted down, bent or absent
  - [ ] Leaf litter disturbed or washed away
  - [ ] Sediment deposition
  - [ ] Water staining
  - Other (list):
- [ ] Discontinuous? Explain: [ ]

- [ ] Presence of litter and debris
- [ ] Destruction of terrestrial vegetation
- [ ] Presence of wrack line
- [ ] Sediment sorting
- [ ] Scour
- [ ] Multiple observed or predicted flow events
- [ ] Abrupt change in plant community
### (iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

  - Project Wetlands: River Miles from TNW:
  - Project Wetlands: Aerial Miles from TNW:
  - Flow is From:
  - Estimate approximate Location of Wetland within Floodplain:
(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; etc.).

Explain

Identify specific pollutants, if known:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- Riparian Buffer Characteristics (type, average width):
- Vegetation type/percent cover. Explain:

  Habitat for:
  - Federally Listed Species Explain:
  - Fish/Spawn Areas Explain:
  - Other environmentally-sensitive species Explain:
  - Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

   Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. Analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:
   - TNWs Linear Feet: Width (ft): TNW Acres
   - Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs
   - Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:
   - Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
     - Provide estimates for jurisdictional waters in the review area (check all that apply):
       - Tributary waters Linear Feet: Width (ft).
       - Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.
   - Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.C.
   - Provide estimates of jurisdictional waters within the review area (check all that apply):
     - Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.
   - Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
     - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW
       - Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW
   - Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
     - Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON‐JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non‐Jurisdictional Waters

Provide acreage estimates for non‐jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- □ Non wetland‐Waters (i.e., rivers, streams): linear feet: width (ft):
- □ Other Non‐wetland Waters MBR acres:
- □ Wetlands MBR acres:

Provide acreage estimates for non‐jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- □ Non‐wetland waters linear feet (ft), width (ft)
- □ Other waters acres
- □ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

   - Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

- [ ] Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
  
  **Explain:**  
  Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

   Identify TNW: ________  □ Vegetation

   Summarize rationale supporting determination:

2. Wetland adjacent to TNW

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 0.52366
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:

     (a) Relationship with TNW

     □ Tributary flows directly to TNW
     ☑ Tributary flows through ________ tributaries before entering TNW

     Project waters are ________ (or more) river miles from TNW
Feature ID: 118

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S. Army Corps of Engineers

Project waters are river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:

Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics
Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft):
Average Depth (ft):
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

- Aquatic/Wildlife Diversity  Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g., between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage...
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

- [ ] TNWs
  - Linear Feet: [ ] Width (ft): [ ] TNW Acres [ ]
- [ ] Wetlands adjacent to TNWs: Acres: [ ]

2. RPWs that flow directly or indirectly into TNWs

- [ ] Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial: [ ]
- [ ] Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: [ ]
  - Provide estimates for jurisdictional waters in the review area (check all that apply):
    - [ ] Tributary waters
      - Linear Feet: [ ] Width (ft): [ ] Acres: [ ]
    - [ ] Other non-wetland waters: Acres: [ ]

3. Non-RPWs that flow directly or indirectly into TNWs.

- [ ] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c. Provide estimates of jurisdictional waters within the review area (check all that apply):
  - Length (Linear Feet): [ ] Width (feet): [ ] Acres: [ ]

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

- [ ] Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
  - [ ] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW: [ ]
  - [ ] Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW: [ ]
  - Provide acreage estimates for jurisdictional wetland in the review area: Acres: [ ]

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

- [ ] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
  - Provide acreage estimates for jurisdictional wetland in the review area: Acres: [ ]

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
□ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section III.C.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

□ Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
□ Other Non-wetland Waters MBR acres:
□ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters linear feet (ft), width (ft)
☑ Other waters acres
☑ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

**SECTION II: SUMMARY OF FINDINGS**

**A. RHA SECTION 10 DETERMINATION OF JURISDICTION**
- There are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.
- ○ Waters subject to the ebb and flow of the tide.
- ○ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

**B. CWA SECTION 404 DETERMINATION OF JURISDICTION**
- There are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.
  1. Waters of the U.S.
      a. Indicate presence of water of U.S. in review area (Check all the apply):
         - ○ TNWs (new)
         - ○ Wetlands adjacent to TNWs
         - ○ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
         - ○ Non-RPWs that flow directly or indirectly into TNWs
         - ○ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
         - ○ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
         - ○ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
         - ○ Impoundments of jurisdictional waters
         - ○ Isolated (interstate or intrastate) waters, including isolated wetlands
     b. Identify (estimate) size of waters of the U.S. in the review area
        - Non-Wetlands waters _______ Linear Feet _______ Width (ft) and/or _______ Acres
        - Wetlands Acres: _______
     c. Limits (boundaries) of Jurisdiction based on:
  2. Non-Regulated Waters/Wetlands (check if applicable):
     - ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
       Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ____________

☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   i) General Area Conditions:

      Watershed Size (sq mi): ________
      Drainage Area (sq mi): ________
      Average Annual Rainfall (in): ________
      Average Annual Snowfall (in): ________

   ii) Physical Characteristics:

      a) Relationship with TNW

      ☐ Tributary flows directly to TNW
      ✓ Tributary flows through ________ tributaries before entering TNW

      Project waters are ________ (or more) river miles from TNW
Feature ID: 119

Project waters are river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:

Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:
   - TNWs  Linear Feet: Width (ft): TNW Acres
   - Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs
   - Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:
   - Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
     - Provide estimates for jurisdictional waters in the review area (check all that apply):
       - Tributary waters  Linear Feet: Width (Ft).
       - Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.
   - Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.C.
   - Provide estimates of jurisdictional waters within the review area (check all that apply):
     - Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.
   - Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
     - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:
       - Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW
   - Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
     - Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): __________ Acres: __________

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: __________ width (ft): __________
☐ Other Non-wetland Waters MBR acres: __________
☐ Wetlands MBR acres: __________

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 2005.83 linear feet, 4.84 width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:
This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

**SECTION I: BACKGROUND INFORMATION**

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  

July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  

Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION:  

Drainage Feature  12

State: AZ  
County/Parish/borough: Pinal County  
City: N/A

Center coordinates of site:  
Lat.  32.8482°N  
Long.  -111.2599°W

Name of nearest waterbody:  

Gila River between Powers Butte and Gillespie Dam

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:  

Name of watershed or Hydrologic Unit Code (HUC):  15050100

☐ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request  
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

**SECTION II: SUMMARY OF FINDINGS**

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There  Are No  "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.  
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There  Are No  "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)  
☐ Wetlands adjacent to TNWs  
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs  
☐ Non-RPWs that flow directly or indirectly into TNWs  
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs  
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs  
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs  
☐ Impoundments of jurisdictional waters  
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters  Linear Feet  Width (ft) and/or  Acres

Wetlands Acres:  

C. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:  

Explain:  

Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW:
   ☐ Vegetation

   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
      Watershed Size (sq mi):
      Drainage Area (sq mi):
      Average Annual Rainfall (in):
      Average Annual Snowfall (in):
   (ii) Physical Characteristics:
      (a) Relationship with TNW
         ☐ Tributary flows directly to TNW
         ☑ Tributary flows through
         tributaries before entering TNW
         Project waters are
         river miles from TNW
**APPROVED JURISDICTIONAL DETERMINATION FORM**

**U.S Army Corps of Engineers**

(d) Proximity (Relationship) to TNW
Project Wetlands: River Miles from TNW: 
Project Wetlands: Aerial Miles from TNW: 
Flow is From: 
Estimate approximate Location of Wetland within Floodplain: 
(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).

Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

[ ] Riparian Buffer  Characteristics (type, average width):

[ ] Vegetation  type/percent cover. Explain:

Habitat for:

[ ] Federally Listed Species  Explain:

[ ] Fish/Spawn Areas  Explain:

[ ] Other environmentally-sensitive species  Explain:

[ ] Aquatic/Wildlife Diversity  Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?, size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:
   - TNWs Linear Feet: Width (ft): TNW Acres
   - Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs
   - Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:
   - Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
     - Provide estimates for jurisdictional waters in the review area (check all that apply):
       - Tributary waters Linear Feet: Width (ft):
       - Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.
   - Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.C.
   - Provide estimates of jurisdictional waters within the review area (check all that apply):
     - Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.
   - Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
     - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:
       - Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW
   - Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
     - Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet):  
Acres:  

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
☐ Other Non-wetland Waters MBR acres:
☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters linear feet (ft), width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

      c. Limits (boundaries) of Jurisdiction based on:
      2. Non-Regulated Waters/Wetlands (check if applicable):
         ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
         Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ____________
   □ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary, that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:
   - Watershed Size (sq mi): 49650
   - Drainage Area (sq mi): 0.01815
   - Average Annual Rainfall (in): 10
   - Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:
   - □ Tributary flows directly to TNW
   - □ Tributary flows through _______ tributaries before entering TNW
   - Project waters are _______ (or more) river miles from TNW

   All wetland(s) being considered in cumulative analysis:
   Wetland acres in total being considered in cumulative analysis:
   Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION
A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:
This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

---

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

- TNWs
  - Linear Feet: 
  - Width (ft): 
  - TNW Acres
- Wetlands adjacent to TNWs:
  - Acres:

2. RPWs that flow directly or indirectly into TNWs

- Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:
- Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
  - Provide estimates for jurisdictional waters in the review area (check all that apply):
    - Tributary waters
      - Linear Feet: 
      - Width (Ft):
    - Other non-wetland waters:
      - Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

- Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.
  - Provide estimates of jurisdictional waters within the review area (check all that apply):
    - Length (Linear Feet):
    - Width (feet): 
    - Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

- Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
  - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
  - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW
  - Provide acreage estimates for jurisdictional wetland in the review area: 
    - Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

- Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
  - Provide acreage estimates for jurisdictional wetland in the review area: 
    - Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction: 

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet):  
Acres:  

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters  
Explain finding of no Significant Nexus: See Section IIC2. 

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non-wetland-Waters (i.e., rivers, streams) 
☐ Other Non-wetland Waters MBR 
☐ Wetlands MBR 

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☐ Non-wetland waters 536.34 linear feet (ft), 4.64 width (ft) 
☐ Other waters acres 
☐ Wetlands acres 

SECTION IV: DATA SOURCES

SECTION II: SUMMARY OF FINDINGS
A. RHA SECTION 10 DETERMINATION OF JURISDICTION
There ☒ "Navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.
☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION
There ☒ "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands
   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters  Linear Feet  Width (ft) and/or  Acres
      Wetlands Acres:  
   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
   ☒ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
      Explain:  Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: [ ]  □ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 0.01848
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:
   (a) Relationship with TNW
   [ ] Tributary flows directly to TNW
   [ ] Tributary flows through [ ] tributaries before entering TNW
   Project waters are [ ] river miles from TNW
   30 (or more)
Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural  Explain:

Tributary properties with respect to top of bank (estimate):
- Average Width (ft):
- Average Depth (ft):
- Average Side Slopes: 3:1

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?

• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?

• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

- [ ] TNWs
- [ ] Wetlands adjacent to TNWs:

2. RPWs that flow directly or indirectly into TNWs

- [ ] Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

- [ ] Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

  Provide estimates for jurisdictional waters in the review area (check all that apply):
  - [ ] Tributary waters
  - [ ] Other non-wetland waters:

3. Non-RPWs that flow directly or indirectly into TNWs.

- [ ] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

  Provide estimates of jurisdictional waters within the review area (check all that apply):
  - Length (Linear Feet):
  - Width (feet):
  - Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

- [ ] Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
  - [ ] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
  
  - [ ] Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:

  Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

- [ ] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

  Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): │ Acres: │

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- [ ] Non wetland-Waters (i.e., rivers, streams): linear feet: │ width (ft):
- [ ] Other Non-wetland Waters MBR acres:
- [ ] Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- [X] Non-wetland waters 271.31 linear feet (ft), 3.62 width (ft) acres
- [ ] Other waters acres
- [ ] Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- [X] Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.
- [X] Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant
  - [ ] Office Concurs with data sheets/delineation report
  - [ ] Office Does Not Concur with data sheets/delineation report
- [ ] Data Sheets Prepared by the Corps
- [ ] Corps Navigable Water Study
- [ ] US Geological Survey Hydrologic Atlas
  - [ ] USGS NHD Data

SECTION II: SUMMARY OF FINDINGS
A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands
   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters Linear Feet Width (ft) and/or Acres
      Wetlands Acres:
   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
   ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
      Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. **TNW**
   - Identify TNW:
   - ☐ Vegetation
   - Summarize rationale supporting determination:

2. **Wetland adjacent to TNW**
   - Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting RPW, the jurisdictional wetland is not adjacent if the RPW is non-navigable.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   - **(i) General Area Conditions:**
     - Watershed Size (sq mi): 49650
     - Drainage Area (sq mi): 0.02968
     - Average Annual Rainfall (in): 10
     - Average Annual Snowfall (in): 0
   - **(ii) Physical Characteristics:**
     - ☐ Tributary flows directly to TNW
     - ☑ Tributary flows through 4 tributaries before entering TNW
     - Project waters are 30 (or more) river miles from TNW
Feature ID: APPROVED JURISDICTIONAL DETERMINATION FORM
U.S. Army Corps of Engineers

Project waters are river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:

Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics
Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft):
Average Depth (ft):
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- [ ] Silts
- [ ] Sands
- [ ] Concrete
- [ ] Muck
- [ ] Cobble
- [ ] Gravel
- [ ] Substrate - Vegetation
- [ ] Other, Explain:

Tributary Condition/ Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:
Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume:
Surface Flow is: Discrete and Confined Characteristics:
Subsurface Flow: No Explain:

Dye (or other) test performed:

Tributary Has (Check all that apply):
- [ ] Bed and Banks
- [ ] OHWM (check all the apply): OHWM Indicators:
  - [ ] Clear, natural line impressed on the bank
  - [ ] Changes in soil character
  - [ ] Shelving
  - [ ] Vegetation matted down, bent or absent
  - [ ] Leaf litter disturbed or washed away
  - [ ] Sediment deposition
  - [ ] Water staining
  - [ ] Presence of litter and debris
  - [ ] Destruction of terrestrial vegetation
  - [ ] Presence of wrack line
  - [ ] Sediment sorting
  - [ ] Scour
  - [ ] Multiple observed or predicted flow events
  - [ ] Abrupt change in plant community

Other (list):

Discontinuous? Explain:
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

3. Characteristics of all wetlands adjacent to the tributary (if any)
All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.
Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage...
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

- [ ] TNWs  Linear Feet: [ ] Width (ft): [ ] TNW Acres [ ]
- [ ] Wetlands adjacent to TNWs: Acres: [ ]

2. RPWs that flow directly or indirectly into TNWs

- [ ] Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial: [ ]
- [ ] Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
  - Provide estimates for jurisdictional waters in the review area (check all that apply):
    - [ ] Tributary waters  Linear Feet: [ ] Width (ft): [ ]
    - [ ] Other non-wetland waters: Acres: [ ]

3. Non-RPWs that flow directly or indirectly into TNWs.

- [ ] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.
  - Provide estimates of jurisdictional waters within the review area (check all that apply):
    - Length (Linear Feet): [ ] Width (feet): [ ] Acres: [ ]

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

- [ ] Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
  - [ ] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
  - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:
  - Provide acreage estimates for jurisdictional wetland in the review area: Acres: [ ]

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

- [ ] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
  - Provide acreage estimates for jurisdictional wetland in the review area: Acres: [ ]

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres): ____________

### 7. Impoundments of Jurisdictional Waters

Demonstration of Jurisdiction: ____________

### E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale: ____________

Length (linear feet): ______ Acres: ______

### F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- [ ] Non wetland-Waters (i.e., rivers, streams): linear feet: ______ width (ft): ______
- [ ] Other Non-wetland Waters MBR acres: ______
- [ ] Wetlands MBR acres: ______

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- [ ] Non-wetland waters 2137.64 linear feet (ft), 4.52 width (ft)
- [ ] Other waters acres
- [ ] Wetlands acres

### SECTION IV: DATA SOURCES

**A. SUPPORTING DATA.** Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
   ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
   
   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. **TNW**
   - Identify TNW: ___________________________
   - □ Vegetation
   - Summarize rationale supporting determination:

2. **Wetland adjacent to TNW**
   - Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary, though a significant nexus finding is not required as a matter of law.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
      - Watershed Size (sq mi): 49650
      - Drainage Area (sq mi): 0.45413
      - Average Annual Rainfall (in): 10
      - Average Annual Snowfall (in): 0
   (ii) Physical Characteristics:
      (a) Relationship with TNW
         - □ Tributary flows directly to TNW
         - ☑ Tributary flows through _______ tributaries before entering TNW
         - Project waters are _______ (or more) river miles from TNW
Project waters are river Miles from tributary to RPW: 
Project waters are aerial (straight) miles from tributary to TNW: 
Project waters are aerial (straight) miles from tributary to RPW: 
Project waters cross or serve as state boundaries. Explain: 
Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: 

Tributary properties with respect to top of bank (estimate):
- Average Width (ft): 
- Average Depth (ft): 
- Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- Silts
- Sands
- Concrete
- Muck
- Gravel
- Substrate - Vegetation
- Other, Explain: 

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

Tributary Geometry: Relatively Straight

Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow

Estimate average number of flow events in review area/year: 2-5

Describe Flow Regime: Ephemeral.

Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined Characteristics: 

Subsurface Flow: No Explain: 

Dye (or other) test performed: 

Tributary Has (Check all that apply):
- Bed and Banks
- OHWM (check all the apply): OHWM Indicators:
- Clear, natural line impressed on the bank
- Changes in soil character
- Shelving
- Vegetation matted down, bent or absent
- Leaf litter disturbed or washed away
- Sediment deposition
- Water staining
- Presence of litter and debris
- Destruction of terrestrial vegetation
- Presence of wrack line
- Sediment sorting
- Scour
- Multiple observed or predicted flow events
- Abrupt change in plant community

Other (list): 

Discontinuous? Explain:

- [ ] Fish/Spawn Areas Explain:

- [ ] Other environmentally-sensitive species Explain:

- [ ] Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage...
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:
   - TNWs  Linear Feet: __________ Width (ft): _______ TNW Acres _______
   - Wetlands adjacent to TNWs: Acres: ______

2. RPWs that flow directly or indirectly into TNWs
   - Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial: ______
   - Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: ______
     - Provide estimates for jurisdictional waters in the review area (check all that apply):
       - Tributary waters  Linear Feet: ______ Width (ft): ______
       - Other non-wetland waters: Acres: ______

3. Non-RPWs that flow directly or indirectly into TNWs.
   - Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.C.
     - Provide estimates of jurisdictional waters within the review area (check all that apply):
       - Length (Linear Feet): ______ Width (feet): ______ Acres: ______

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.
   - Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW: ______
     - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW: ______
       - Provide acreage estimates for jurisdictional wetland in the review area: Acres: ______

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW
   - Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
     - Provide acreage estimates for jurisdictional wetland in the review area: Acres: ______

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): _______  Acres: _______

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams):  linear feet: _______  width (ft): _______
☐ Other Non-wetland Waters MBR acres: _______
☐ Wetlands MBR acres: _______

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☐ Non-wetland waters  1405.61 linear feet (ft),  7.70 width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☐ Maps, Plans, Plots or Plat Submitted by  Applicant/Consultant: WestLand Resources, Inc.

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 124

State: AZ  County/Parish/borough: Pinal County  City: N/A

Center coordinates of site: Lat. 32.8482°N  Long. -111.2599°W

Name of nearest waterbody: 

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc.) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date: 
☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There ☐ Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There ☐ Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):

      □ TNWs (new)
      □ Wetlands adjacent to TNWs
      □ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      □ Non-RPWs that flow directly or indirectly into TNWs
      □ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      □ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      □ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      □ Impoundments of jurisdictional waters
      □ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area

      Non-Wetlands waters Linear Feet Width (ft) and/or Acres

      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

   Identify TNW:
   ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 0.00412
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:

   (a) Relationship with TNW

   ☐ Tributary flows directly to TNW
   ☑ Tributary flows through 4 tributaries before entering TNW

   Project waters are 30 (or more) river miles from TNW
Project waters are 30 (or more) river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are ____________ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: ____________
Tributary properties with respect to top of bank (estimate):
- Average Width (ft):
- Average Depth (ft):
- Average Side Slopes: 3:1
Primary tributary substrate composition (check all that apply):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis: 

Wetland acres in total being considered in cumulative analysis: 

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage...
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

   □ TNWs Linear Feet: Width (ft): TNW Acres

   □ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

   □ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

   □ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

   Provide estimates for jurisdictional waters in the review area (check all that apply):

   □ Tributary waters Linear Feet: Width (Ft).

   □ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

   □ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

   Provide estimates of jurisdictional waters within the review area (check all that apply):

   Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

   □ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

   □ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

   □ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:

   Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

   □ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): ______ Acres: ______

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: ______ width (ft): ______
☐ Other Non-wetland Waters MBR acres: ______
☐ Wetlands MBR acres: ______

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 371.61 linear feet (ft), 3.87 width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  
July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  
Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature  
125

State: AZ  
County/Parish/borough: Pinal  
City: N/A

Center coordinates of site: Lat. 32.8482°N  
Long. -111.2599°W

Name of nearest waterbody:  
Gila River between Powers Butte and Gillespie Dam

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:  

Name of watershed or Hydrologic Unit Code (HUC):  
15050100

☐ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)  
☐ Office (Desk) Determination. Date:  
☐ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION  
There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION  
There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters Linear Feet Width (ft) and/or Acres
      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
   ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. **TNW**
   
   Identify TNW: ____________________________  □ Vegetation

   Summarize rationale supporting determination:

2. **Wetland adjacent to TNW**

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) **General Area Conditions:**
   
   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 0.28894
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0

   (ii) **Physical Characteristics:**

   (a) **Relationship with TNW**
   
   □ Tributary flows directly to TNW
   ☑ Tributary flows through 4 tributaries before entering TNW
   
   Project waters are 30 (or more) river miles from TNW
**Feature ID:** 125

**U.S Army Corps of Engineers**

Project waters are [ ] river Miles from tributary to RPW:

Project waters are [ ] 30 (or more) aerial (straight) miles from tributary to TNW:

Project waters are [ ] aerial (straight) miles from tributary to RPW:

Project waters cross or serve as state boundaries. Explain:

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

### (b) General Tributary Characteristics

<table>
<thead>
<tr>
<th>Tributary is:</th>
<th>Natural</th>
<th>Explain:</th>
</tr>
</thead>
</table>

**Tributary properties with respect to top of bank (estimate):**

- Average Width (ft):
- Average Depth (ft):
- Average Side Slopes: 3:1

**Primary tributary substrate composition (check all that apply):**

- [ ] Silts
- [ ] Sands
- [ ] Concrete
- [ ] Muck
- [ ] Cobbles
- [ ] Gravel
- [ ] Substrate - Vegetation

Other, Explain:

**Tributary Condition/ Stability [e.g., highly eroding, sloughing banks. Explain: Stable.**

**Presence of Run/Riffle/Pool Complexes. Explain: Not present.**

**Tributary Geometry: Relatively Straight**

**Tributary Gradient (approximate average slope): 1%**

### (c) Flow:

**Tributary Provides for: Ephemeral Flow**

**Estimate average number of flow events in review area/year:** 2-5

**Describe Flow Regime: Ephemeral.**

**Other Information on Duration and Volume:**

**Surface Flow is: Discrete and Confined**

**Characteristics:**

**Subsurface Flow:**

- [ ] Dye (or other) test performed:

**Tributary Has (Check all that apply):**

- [ ] Bed and Banks
- [ ] OHWM (check all the apply): OHWM Indicators:
  - [ ] Clear, natural line impressed on the bank
  - [ ] Changes in soil character
  - [ ] Shelving
  - [ ] Vegetation matted down, bent or absent
  - [ ] Leaf litter disturbed or washed away
  - [ ] Sediment deposition
  - [ ] Water staining

Other (list):

**Discontinuous? Explain:**
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

- High tide line indicated by: _______________
- Oil or scum line along shore objects
- Fine shell or debris deposits (foreshore)
- Physical markings/characteristics
- Tidal gauges
- Other

- Mean high water mark indicated by: _______________
- Survey to available datum
- Physical markings
- Vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain: _______________

Identify specific pollutants, if known: _______________

(iv) Biological Characteristics. Channel supports (check all that apply):

- Riparian corridor characteristics: _______________
- Wetland fringe characteristics: _______________

Habitat for:

- Federally listed species: Explain findings: _______________
- Fish/spawn areas: Explain findings: _______________
- Other environmentally sensitive species: Explain findings: _______________
- Aquatic/wildlife diversity: Explain: _______________

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

- Wetland size (ac): _______________
- Wetland type, explain: _______________
- Wetland quality, explain: _______________

Project wetlands cross or serve as state boundaries, explain: _______________

(b) General Flow Relationship with Non-TNW:

Wetland flow is: _______________ Explain: _______________

Surface flow is: _______________

Characteristics: _______________

Subsurface flow: _______________

Explain Findings: _______________

(c) Wetland Adjacency Determination with Non-TNW:

- Wetland directly abutting non-TNW
- Wetland not directly abutting non-TNW
  - Discrete wetland hydrologic connection: Explain: _______________
  - Ecological connection: Explain: _______________
  - Separated by berm/barrier: Explain: _______________

(d) Proximity (Relationship) to TNW:

Project wetlands: river miles from TNW: _______________

Project wetlands: aerial miles from TNW: _______________

Flow is from: _______________

Estimate approximate location of wetland within floodplain: _______________
(ii) Chemical Characteristics:
Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).

Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

☐ Riparian Buffer Characteristics (type, average width):

☐ Vegetation type/percent cover. Explain:

Habitat for:

☐ Federally Listed Species Explain:

☐ Fish/Spawn Areas Explain:

☐ Other environmentally-sensitive species Explain:

☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)
All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downstream flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

   **Explain:** Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ___________________________ ☐ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.01728
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0
   (ii) Physical Characteristics:
      (a) Relationship with TNW
         ☐ Tributary flows directly to TNW
         ☑ Tributary flows through ______ tributaries before entering TNW
         Project waters are ______ river miles from TNW
(b) General Tributary Characteristics

Tributary is: Natural   Explain: 

Tributary properties with respect to top of bank (estimate):
- Average Width (ft):
- Average Depth (ft):
- Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- [ ] Silts
- [ ] Sands
- [ ] Concrete
- [ ] Muck
- [ ] Cobble
- [ ] Gravel
- [ ] Substrate - Vegetation

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain:] Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined   Characteristics: 
Subsurface Flow: No   Explain: 

Dye (or other) test performed: 

Tributary Has (Check all that apply):
- [ ] Bed and Banks
- [ ] OHWM (check all the apply): OHWM Indicators:
  - [ ] Clear, natural line impressed on the bank
  - [ ] Changes in soil character
  - [ ] Shelving
  - [ ] Vegetation matted down, bent or absent
  - [ ] Leaf litter disturbed or washed away
  - [ ] Sediment deposition
  - [ ] Water staining
  - Presence of litter and debris
  - Destruction of terrestrial vegetation
  - Presence of wrack line
  - Sediment sorting
  - Scour
  - Multiple observed or predicted flow events
  - Abrupt change in plant community

Other (list): 

Discontinuous? Explain: 

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

- [ ] High tide line indicated by: ____________________________  
  - [ ] oil or scum line along shore objects
  - [ ] fine shell or debris deposits (foreshore)
  - [ ] physical markings/characteristics
  - [ ] tidal gauges
  - [ ] other

- [ ] Mean High water Mark indicated by: ____________________________  
  - [ ] survey to available datum
  - [ ] physical markings
  - [ ] vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain: ____________________________________________________________________________

Identify Specific Pollutants, if known: ____________________________________________________________________________

(iv) Biological Characteristics. Channel supports (check all that apply):

- [ ] Riparian Corridor Characteristics: ____________________________________________________________________________
- [ ] Wetland Fringe Characteristics: _________________________________________________________________________________

Habitat for:

- [ ] Federally Listed Species Explain findings: ____________________________________________________________________________
- [ ] Fish/Spawn Areas Explain findings: _________________________________________________________________________________
- [ ] Other environmentally -sensitive species Explain findings: ____________________________________________________________________________
- [ ] Aquatic/Wildlife diversity Explain: _________________________________________________________________________________

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

- Wetland Size (ac): __________
- Wetland Type, Explain: ____________________________________________________________________________
- Wetland Quality, Explain: ____________________________________________________________________________

Project Wetlands Cross or Serve as State Boundaries, Explain: ____________________________________________________________________________

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: ____________________________________________________________________________

Explain: ____________________________________________________________________________

Surface Flow is: ____________________________________________________________________________

Characteristics: ____________________________________________________________________________

Subsurface Flow: ____________________________________________________________________________

Explain Findings: ____________________________________________________________________________

(c) Wetland Adjacency Determination with Non-TNW:

- [ ] Wetland Directly Abutting Non-TNW
- [ ] Wetland Not Directly Abutting Non-TNW
  - [ ] Discrete wetland hydrologic connection Explain: ____________________________________________________________________________
  - [ ] Ecological connection Explain: ____________________________________________________________________________
  - [ ] Separated by berm/barrier Explain: ____________________________________________________________________________

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW: __________

Project Wetlands: Aerial Miles from TNW: __________

Flow is From: ____________________________________________________________________________

Estimate approximate Location of Wetland within Floodplain: ____________________________________________________________________________
(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).

Explain

Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- □ Riparian Buffer  Characteristics (type, average width):
- □ Vegetation  type/percent cover. Explain:

Habitat for:

- □ Federally Listed Species  Explain:
- □ Fish/Spawn Areas  Explain:
- □ Other environmentally-sensitive species  Explain:
- □ Aquatic/Wildlife Diversity  Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

- [ ] TNWs
  - Linear Feet: __________ Width (ft): __________ TNW Acres __________

- [ ] Wetlands adjacent to TNWs
  - Acres: __________

2. RPWs that flow directly or indirectly into TNWs

- [ ] Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial: __________

- [ ] Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: __________

  Provide estimates for jurisdictional waters in the review area (check all that apply):

  - [ ] Tributary waters
    - Linear Feet: __________ Width (Ft): __________

  - [ ] Other non-wetland waters
    - Acres: __________

3. Non-RPWs that flow directly or indirectly into TNWs.

- [ ] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at Section III.C.

  Provide estimates of jurisdictional waters within the review area (check all that apply):

  - Length (Linear Feet): __________ Width (feet): __________ Acres: __________

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

- [ ] Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

  - [ ] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW: __________

  - [ ] Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW: __________

    Provide acreage estimates for jurisdictional wetland in the review area: Acres: __________

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

- [ ] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

  Provide acreage estimates for jurisdictional wetland in the review area: Acres: __________

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
- Other Non-wetland Waters MBR acres:
- Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- Non-wetland waters linear feet (ft), width (ft)
- Other waters acres
- Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  
July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  
Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 127  
State: AZ  
County/Parish/borough: Pinal  
Center coordinates of site: Lat. 32.8482"N  Long. -111.2599"W  

Name of nearest waterbody: Gila River between Powers Butte and Gillespie Dam

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:  
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☐ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)  
☐ Office (Desk) Determination. Date:  
☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION  
There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.  
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION  
There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all that apply):
      ☐ TNWs (new)  
      ☐ Wetlands adjacent to TNWs  
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs  
      ☐ Non-RPWs that flow directly or indirectly into TNWs  
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs  
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs  
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs  
      ☐ Impoundments of jurisdictional waters  
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands
   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters Linear Feet Width (ft) and/or Acres  
      Wetlands Acres:
   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
   ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:  
   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ________________________ □ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.13396
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0
   (ii) Physical Characteristics:
      (a) Relationship with TNW
         □ Tributary flows directly to TNW
         □ Tributary flows through 4 tributaries before entering TNW
         Project waters are 30 (or more) river miles from TNW

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downstream flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

   - TNWs Linear Feet: Width (ft): TNW Acres
   - Wetlands adjacent to TNWs: Acres

2. RPWs that flow directly or indirectly into TNWs

   - Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:
   - Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
     - Provide estimates for jurisdictional waters in the review area (check all that apply):
       - Tributary waters Linear Feet: Width (ft).
       - Other non-wetland waters: Acres

3. Non-RPWs that flow directly or indirectly into TNWs.

   - Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.
   - Provide estimates of jurisdictional waters within the review area (check all that apply):
     - Length (Linear Feet): Width (feet): Acres

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

   - Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
     - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:
   - Provide acreage estimates for jurisdictional wetland in the review area: Acres

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

   - Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
   - Provide acreage estimates for jurisdictional wetland in the review area: Acres

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Feature ID: 127

Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet):  Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- [ ] Non wetland-Waters (i.e., rivers, streams):  linear feet:  width (ft):
- [ ] Other Non-wetland Waters MBR acres:
- [ ] Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- [x] Non-wetland waters  linear feet (ft),  width (ft)
- [ ] Other waters acres
- [ ] Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- [x] Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.
- [x] Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:
This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION
A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) | July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER | Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: | Drainage Feature 128
State: AZ | County/Parish/borough: Pinal County
City: N/A | Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☐ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc…) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)
☐ Office (Desk) Determination. Date: 

☐ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS
A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands
   
   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters Linear Feet Width (ft) and/or Acres
      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
   ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ____________________________
   □ Vegetation

   Summarize rationale supporting determination:

2. Wetland adjacent to TNW

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.01570
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0
   (ii) Physical Characteristics:
      (a) Relationship with TNW
         □ Tributary flows directly to TNW
         ☑ Tributary flows through 4 tributaries before entering TNW
         Project waters are 30 (or more) river miles from TNW
Project waters are river Miles from tributary to RPW: 
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW: 
Project waters are aerial (straight) miles from tributary to RPW: 
Project waters cross or serve as state boundaries. Explain: 

Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

**General Tributary Characteristics**

Tributary is: Natural

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW: __________________________
Project Wetlands: Aerial Miles from TNW: _________________________
Flow is From: __________________________
Estimate approximate Location of Wetland within Floodplain: ______________________
(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).

Explain

Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- Riparian Buffer  Characteristics (type, average width):
- Vegetation  type/percent cover. Explain:
- Habitat for:
  - Federally Listed Species  Explain:
  - Fish/Spawn Areas  Explain:
  - Other environmentally-sensitive species  Explain:
  - Aquatic/Wildlife Diversity  Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs  Linear Feet:     Width (ft):     TNW Acres:

☐ Wetlands adjacent to TNWs:  Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

   Provide estimates for jurisdictional waters in the review area (check all that apply):

   ☐ Tributary waters  Linear Feet:  Width (Ft).

   ☐ Other non-wetland waters:  Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

   Provide estimates of jurisdictional waters within the review area (check all that apply):

   Length (Linear Feet):     Width (feet):     Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

   ☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

   ☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:

   Provide acreage estimates for jurisdictional wetland in the review area:  Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide acreage estimates for jurisdictional wetland in the review area:  Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction: 

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section III.C.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
☐ Other Non-wetland Waters MBR acres:
☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☐ Non-wetland waters 1043.60 linear feet (ft), 5.14 width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)

☐ Wetlands adjacent to TNWs

☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs

☐ Non-RPWs that flow directly or indirectly into TNWs

☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs

☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs

☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs

☐ Impoundments of jurisdictional waters

☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

C. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

   Identify TNW: __________________________  □ Vegetation

   Summarize rationale supporting determination:

2. Wetland adjacent to TNW

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.00851
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:

      (a) Relationship with TNW

         □ Tributary flows directly to TNW
         ✅ Tributary flows through 4 tributaries before entering TNW

      Project waters are 30 (or more) river miles from TNW
**APPROVED JURISDICTIONAL DETERMINATION FORM**

U.S Army Corps of Engineers

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPWM that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands.  Check all that apply and provide size estimates in review area:
   - [ ] TNWs  Linear Feet:  Width (ft):  TNW Acres  
   - [ ] Wetlands adjacent to TNWs:  Acres:  

2. RPWs that flow directly or indirectly into TNWs
   - [ ] Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:  
   - [ ] Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:  
     - Provide estimates for jurisdictional waters in the review area (check all that apply):
       - [ ] Tributary waters  Linear Feet:  Width (ft):  
       - [ ] Other non-wetland waters:  Acres:  

3. Non-RPWs that flow directly or indirectly into TNWs.
   - [ ] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c. 
     - Provide estimates of jurisdictional waters within the review area (check all that apply):
       - Length (Linear Feet):  Width (feet):  Acres:  

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.
   - [ ] Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.  
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:  
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow "Seasonally".  Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW  
       - Provide acreage estimates for jurisdictional wetland in the review area:  Acres:  

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW  
   - [ ] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C. 
     - Provide acreage estimates for jurisdictional wetland in the review area:  Acres:  

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction: 

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- Non-wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
- Other Non-wetland Waters MBR acres:
- Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- Non-wetland waters 328.78 linear feet, 3.72 width (ft)
- Other waters acres
- Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date: 
☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands
   b. Identify (estimate) size of waters of the U.S. in the review area

      Non-Wetlands waters ___________ Linear Feet ___________ Width (ft) and/or ___________ Acres

      Wetlands Acres: 

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
   ☐ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
   ☑ Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

   Identify TNW:  
   [ ] Vegetation

   Summarize rationale supporting determination:

2. Wetland adjacent to TNW

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 0.16963
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0

(ii) Physical Characteristics:

   (a) Relationship with TNW

   [ ] Tributary flows directly to TNW
   [X] Tributary flows through 4 tributaries before entering TNW

   Project waters are 30 (or more) river miles from TNW
**Feature ID:** 13  
**U.S. Army Corps of Engineers**

<table>

3. Characteristics of all wetlands adjacent to the tributary (if any)
All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?, size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION
A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.
Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:
This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

### D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. **TNWs and Adjacent Wetlands.** Check all that apply and provide size estimates in review area:

   - [ ] TNWs  Linear Feet:  Width (ft):  TNW Acres
   - [ ] Wetlands adjacent to TNWs:  Acres:

2. **RPWs that flow directly or indirectly into TNWs**
   - [ ] Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:
   - [ ] Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
     - Provide estimates for jurisdictional waters in the review area (check all that apply):
       - [ ] Tributary waters  Linear Feet:  Width (Ft).
       - [ ] Other non-wetland waters:  Acres:

3. **Non-RPWs that flow directly or indirectly into TNWs.**
   - [ ] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.
     - Provide estimates of jurisdictional waters within the review area (check all that apply):
       - Length (Linear Feet):  Width (feet):  Acres:

4. **Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.**
   - [ ] Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW
       - Provide acreage estimates for jurisdictional wetland in the review area:  Acres:

5. **Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW**
   - [ ] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
     - Provide acreage estimates for jurisdictional wetland in the review area:  Acres:

6. **Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.**
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): ______ Acres: ______

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: ______ width (ft): ______
☐ Other Non-wetland Waters MBR acres: ______
☐ Wetlands MBR acres: ______

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☒ Non-wetland waters 839.53 linear feet (ft), 4.31 width (ft)
☒ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:
This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  
July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  
Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 130

State: AZ  
County/Parish/borough: Pinal County  
City: N/A

Center coordinates of site:  
Lat. 32.8482°N  
Long. -111.2599°W

Name of nearest waterbody:  
Gila River between Powers Butte and Gillespie Dam

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:  

Name of watershed or Hydrologic Unit Code (HUC):  
15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:  
☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):

      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area

      Non-Wetlands waters Linear Feet Width (ft) and/or Acres

      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. **TNW**
   - Identify TNW:  
   - □ Vegetation
   - Summarize rationale supporting determination:

2. **Wetland adjacent to TNW**
   - Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) **General Area Conditions:**
   - Watershed Size (sq mi): 49650
   - Drainage Area (sq mi): 8.40256
   - Average Annual Rainfall (in): 10
   - Average Annual Snowfall (in): 0

   (ii) **Physical Characteristics:**
   - □ Tributary flows directly to TNW
   - □ Tributary flows through 4 tributaries before entering TNW
   - Project waters are 30 (or more) river miles from TNW
Project waters are river
Project waters are 30 (or more)
Project waters are aerial (straight)
Project waters cross or serve as state boundaries.

Identify flow route to TNW

(b) General Tributary Characteristics

Tributary is: Natural

Tributary properties with respect to top of bank (estimate):
- Average Width (ft):
- Average Depth (ft):
- Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- Silts
- Gravel
- Substrate - Vegetation

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain:]
Stable.

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

Tributary Geometry:
- Relatively Straight

Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for:
Ephemeral Flow

Estimate average number of flow events in review area/year:
2-5

Describe Flow Regime:
Ephemeral.

Other Information on Duration and Volume:

Surface Flow is:
Discrete and Confined

Subsurface Flow:
No

Dye (or other) test performed:

Tributary Has (Check all that apply):

- Bed and Banks
- OHWM (check all the apply): OHWM Indicators:
  - Clear, natural line impressed on the bank
  - Changes in soil character
  - Shelving
  - Vegetation matted down, bent or absent
  - Leaf litter disturbed or washed away
  - Sediment deposition
  - Water staining

Other (list):

Discontinuous? Explain:
(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain: __________________________

Identify Specific Pollutants, if known: __________________________

(iv) Biological Characteristics. Channel supports (check all that apply):

- Riparian Corridor Characteristics:
  - Federally Listed Species: Explain findings: __________________________
  - Fish/Spawn Areas: Explain findings: __________________________
  - Other environmentally-sensitive species: Explain findings: __________________________
  - Aquatic/Wildlife diversity: Explain: __________________________

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:
  - Wetland Size (ac): __________________________
  - Wetland Type, Explain: __________________________
  - Wetland Quality, Explain: __________________________

Project Wetlands Cross or Serve as State Boundaries, Explain: __________________________

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: __________________________

Surface Flow is: __________________________

Characteristics: __________________________

Subsurface Flow: __________________________

Explain Findings: __________________________

(c) Wetland Adjacency Determination with Non-TNW:

- Wetland Directly Abutting Non-TNW
- Wetland Not Directly Abutting Non-TNW
  - Discrete wetland hydrologic connection: Explain: __________________________
  - Ecological connection: Explain: __________________________
  - Separated by berm/barrier: Explain: __________________________

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW: __________________________

Project Wetlands: Aerial Miles from TNW: __________________________

Flow is From: __________________________

Estimate approximate Location of Wetland within Floodplain: __________________________
(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).

Explain

Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- Riparian Buffer Characteristics (type, average width):
- Vegetation type/percent cover. Explain:

Habitat for:
- Federally Listed Species Explain:
- Fish/Spawn Areas Explain:
- Other environmentally-sensitive species Explain:
- Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage...
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet:  Width (ft):  TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review area (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at Section III.C.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet):  Width (feet):  Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Provide estimates for jurisdictional wetland in the review area (in acres):

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- Non-wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
- Other Non-wetland Waters MBR acres:
- Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- Non-wetland waters linear feet (ft), width (ft)
- Other waters acres
- Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

- [ ]
This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  
July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  
Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 131

State: AZ  
County/Parish/borough: Pinal County  
City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody: Gila River between Powers Butte and Gillespie Dam

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: 

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date: 

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)

☐ Wetlands adjacent to TNWs

☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs

☐ Non-RPWs that flow directly or indirectly into TNWs

☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs

☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs

☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs

☐ Impoundments of jurisdictional waters

☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

1. Limits (boundaries) of Jurisdiction based on:

   ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ____________________________ ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 0.06103
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:

   (a) Relationship with TNW

   ☐ Tributary flows directly to TNW
   ✓ Tributary flows through 4 tributaries before entering TNW
   Project waters are 30 (or more) river miles from TNW
APPROVED JURISDICTIONAL DETERMINATION FORM

U.S. Army Corps of Engineers

Feature ID: 131

Project waters are river Miles from tributary to RPW: 
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW: 
Project waters are aerial (straight) miles from tributary to RPW: 
Project waters cross or serve as state boundaries. Explain: 

Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: 
Tributary properties with respect to top of bank (estimate):
  Average Width (ft): 
  Average Depth (ft): 
  Average Side Slopes: 3:1
Primary tributary substrate composition (check all that apply):
  - Silts
  - Sands
  - Concrete
  - Muck
  - Gravel
  - Substrate - Vegetation
  Other, Explain: 
Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.

3. Characteristics of all wetlands adjacent to the tributary (if any)
All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION
A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downstream flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage...
2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands.  Check all that apply and provide size estimates in review area:

- [ ] TNWs  Linear Feet:  Width (ft):  TNW Acres
- [ ] Wetlands adjacent to TNWs:  Acres:

2. RPWs that flow directly or indirectly into TNWs

- [ ] Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

- [ ] Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

  Provide estimates for jurisdictional waters in the review area (check all that apply):

  - [ ] Tributary waters  Linear Feet:  Width (ft):
  - [ ] Other non-wetland waters:  Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

- [ ] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

  Provide estimates of jurisdictional waters within the review area (check all that apply):

  Length (Linear Feet):  Width (feet):  Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

- [ ] Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

  - [ ] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

  - [ ] Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

  Provide acreage estimates for jurisdictional wetland in the review area:  Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

- [ ] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

  Provide acreage estimates for jurisdictional wetland in the review area:  Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres): 

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction: 

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
☐ Other Non-wetland Waters MBR acres:
☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☐ Non-wetland waters linear feet (ft), width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There ☐ Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.  
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There ☐ Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):
   ☐ TNWs (new)  
   ☐ Wetlands adjacent to TNWs  
   ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs  
   ☐ Non-RPWs that flow directly or indirectly into TNWs  
   ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs  
   ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs  
   ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs  
   ☐ Impoundments of jurisdictional waters  
   ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area

      Non-Wetlands waters Linear Feet Width (ft) and/or Acres  
      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☒ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1 only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1; otherwise, see Section III.B below.

1. TNW

   Identify TNW: ____________________________   ☐ Vegetation

   Summarize rationale supporting determination:

2. Wetland adjacent to TNW

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.25227
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:

      (a) Relationship with TNW

         ☐ Tributary flows directly to TNW
         ☑ Tributary flows through 4 tributaries before entering TNW

         Project waters are 30 (or more) river miles from TNW
**Feature ID:** 132  

**U.S Army Corps of Engineers**

- Project waters are river Miles from tributary to RPW:
- Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
- Project waters are aerial (straight) miles from tributary to RPW:
- Project waters cross or serve as state boundaries. Explain:

**Identify flow route to TNW**

Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

### (b) General Tributary Characteristics

Tributary is: Natural  
Explain:

☐ Aquatic/Wildlife Diversity Explain: 

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis: 

Wetland acres in total being considered in cumulative analysis: 

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

<table>
<thead>
<tr>
<th></th>
<th>TNWs</th>
<th>Linear Feet:</th>
<th>Width (ft):</th>
<th>TNW Acres</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Wetlands adjacent to TNWs:</td>
<td>Acres:</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

2. RPWs that flow directly or indirectly into TNWs

- Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

- Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

  Provide estimates for jurisdictional waters in the review are (check all that apply):

<table>
<thead>
<tr>
<th></th>
<th>Tributary waters</th>
<th>Linear Feet:</th>
<th>Width (Ft):</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Other non-wetland waters:</td>
<td>Acres:</td>
<td></td>
</tr>
</tbody>
</table>

3. Non-RPWs that flow directly or indirectly into TNWs.

- Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

  Provide estimates of jurisdictional waters within the review area (check all that apply):

<table>
<thead>
<tr>
<th></th>
<th>Length (Linear Feet):</th>
<th>Width (feet):</th>
<th>Acres:</th>
</tr>
</thead>
</table>

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

- Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

  - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

  - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:

  Provide acreage estimates for jurisdictional wetland in the review area: | Acres: |

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

- Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

  Provide acreage estimates for jurisdictional wetland in the review area: | Acres: |

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction: 

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale: 
Length (linear feet): Acres: 

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters 

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):
- Other Non-wetland Waters MBR acres: 
- Wetlands MBR acres: 

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- Non-wetland waters linear feet (ft), width (ft) 
- Other waters acres 
- Wetlands acres 

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  

July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  

Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 133

State: AZ  County/Parish/borough: Pinal County  City: N/A

Center coordinates of site: Lat. 32.8482°N  Long. -111.2599°W

Name of nearest waterbody: 

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: 

Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination  Date: 

☑ Field Determination  Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):

      ☐ TNWs (new)

      ☐ Wetlands adjacent to TNWs

      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs

      ☐ Non-RPWs that flow directly or indirectly into TNWs

      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs

      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs

      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs

      ☐ Impoundments of jurisdictional waters

      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area

      Non-Wetlands waters Linear Feet Width (ft) and/or Acres

      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. **TNW**
   - Identify TNW: __________
   - □ Vegetation

   Summarize rationale supporting determination:

2. **Wetland adjacent to TNW**

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   **(i) General Area Conditions:**
   - Watershed Size (sq mi): 49650
   - Drainage Area (sq mi): 0.00375
   - Average Annual Rainfall (in): 10
   - Average Annual Snowfall (in): 0

   **(ii) Physical Characteristics:**

   □ Tributary flows directly to TNW
   - Tributary flows through 4 tributaries before entering TNW
   - Project waters are 30 (or more) river miles from TNW
Feature ID: 133

U.S. Army Corps of Engineers

Project waters are ______ river Miles from tributary to RPW:
Project waters are ______ 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are ______ 30 (or more) aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural

Tributary properties with respect to top of bank (estimate):
Average Width (ft):
Average Depth (ft):
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- [ ] Silts
- [ ] Sands
- [ ] Concrete
- [ ] Muck
- [ ] Gravel
- [ ] Substrate - Vegetation
- Other, Explain:

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

Tributary Geometry: Relatively Straight

Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5

Describe Flow Regime: Ephemeral.

Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined
Subsurface Flow: No

Dye (or other) test performed:

Tributary Has (Check all that apply):
- [ ] Bed and Banks
- [x] OHWM (check all that apply): OHWM Indicators:
  - [x] Clear, natural line impressed on the bank
  - [x] Changes in soil character
  - [x] Shelving
  - [ ] Vegetation matted down, bent or absent
  - [ ] Leaf litter disturbed or washed away
  - [ ] Sediment deposition
  - [ ] Water staining
- Other (list):

- [ ] Discontinuous? Explain:
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

- High tide line indicated by: 
  - oil or scum line along shore objects
  - fine shell or debris deposits (foreshore)
  - physical markings/characteristics
  - tidal gauges
  - other

- Mean High water Mark indicated by: 
  - survey to available datum
  - physical markings
  - vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc): 

Explain: 

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

- Riparian Corridor Characteristics:
- Wetland Fringe Characteristics:

Habitat for:

- Federally Listed Species
- Fish/Spawn Areas
- Other environmentally-sensitive species
- Aquatic/Wildlife diversity

Explain findings:

Other environmentally-sensitive species Explain:

Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

- Wetland Size (ac):
- Wetland Type, Explain:
- Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

- Wetland Flow is:
- Surface Flow is:

Characteristics:

Subsurface Flow:

Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- Wetland Directly Abutting Non-TNW
- Wetland Not Directly Abutting Non-TNW

- Discrete wetland hydrologic connection
- Ecological connection
- Separated by berm/barrier

Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:
C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downstream flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage...
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs  Linear Feet: ____ Width (ft): ____ TNW Acres ____

☐ Wetlands adjacent to TNWs: Acres: ____

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

  Provide estimates for jurisdictional waters in the review area (check all that apply):

  ☐ Tributary waters  Linear Feet: ____ Width (ft).

  ☐ Other non-wetland waters: Acres: ____

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

  Provide estimates of jurisdictional waters within the review area (check all that apply):

  Length (Linear Feet): ____ Width (feet): ____ Acres: ____

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

  ☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

  ☐ Wetlands directly abutting an RPW where tributaries typically flow "seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

  Provide acreage estimates for jurisdictional wetland in the review area: Acres: ____

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

  Provide acreage estimates for jurisdictional wetland in the review area: Acres: ____

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): ______ Acres: ______

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters ______

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: ______ width (ft): ______
☐ Other Non-wetland Waters MBR acres: ______
☐ Wetlands MBR acres: ______

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 667.64 linear feet (ft), 3.77 width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.
☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant
☐ Office Concurs with data sheets/delineation report
☐ Office Does Not Concur with data sheets/delineation report

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  
July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  
Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 134

State: AZ  
County/Parish/borough: Pinal County  
City: N/A

Center coordinates of site:  
Lat. 32.8482°N  
Long. -111.2599°W

Name of nearest waterbody:  
Gila River between Powers Butte and Gillespie Dam

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:  

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:  
☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)  
      ☐ Wetlands adjacent to TNWs  
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs  
      ☐ Non-RPWs that flow directly or indirectly into TNWs  
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs  
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs  
      ☐ Impoundments of jurisdictional waters  
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands
   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters  Linear Feet  Width (ft) and/or  Acres
      Wetlands Acres:
   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
   ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. **TNW**
   - Identify TNW: ____________
   - □ Vegetation

   Summarize rationale supporting determination:

2. **Wetland adjacent to TNW**

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) **General Area Conditions:**
   - Watershed Size (sq mi): 49650
   - Drainage Area (sq mi): 0.02611
   - Average Annual Rainfall (in): 10
   - Average Annual Snowfall (in): 0

   (ii) **Physical Characteristics:**
   - □ Tributary flows directly to TNW
   - ✔ Tributary flows through __4__ tributaries before entering TNW
   - Project waters are __30 (or more)__ river miles from TNW
(b) General Tributary Characteristics

Tributary is: Natural  Explain: 

Tributary properties with respect to top of bank (estimate):
- Average Width (ft): 
- Average Depth (ft): 
- Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- Silts
- Gravel
- Substrate - Vegetation
- Other, Explain: 

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

Tributary Geometry: Relatively Straight

Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow

Estimate average number of flow events in review area/year: 2-5

Describe Flow Regime: Ephemeral.

Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined  Characteristics: 

Subsurface Flow: No  Explain: 

Dye (or other) test performed: 

Tributary Has (Check all that apply):

  - Discrete wetland hydrologic connection Explain: [ ]
  - Ecological connection Explain: [ ]
  - Separated by berm/barrier Explain: [ ]

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW: [ ]
Project Wetlands: Aerial Miles from TNW: [ ]
Flow is From: [ ]
Estimate approximate Location of Wetland within Floodplain: [ ]
(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).

Explain

Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- Riparian Buffer  Characteristics (type, average width):
- Vegetation  type/percent cover. Explain:

Habitat for:
- Federally Listed Species  Explain:
- Fish/Spawn Areas  Explain:
- Other environmentally-sensitive species  Explain:
- Aquatic/Wildlife Diversity  Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of dowgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

- [ ] TNWs
  - Linear Feet: __________ Width (ft): __________ TNW Acres __________
- [ ] Wetlands adjacent to TNWs: Acres: __________

2. RPWs that flow directly or indirectly into TNWs

- [ ] Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial: __________
- [ ] Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: __________

  Provide estimates for jurisdictional waters in the review area (check all that apply):

  - [ ] Tributary waters
    - Linear Feet: __________ Width (ft): __________
  - [ ] Other non-wetland waters: Acres: __________

3. Non-RPWs that flow directly or indirectly into TNWs.

- [ ] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.C.

  Provide estimates of jurisdictional waters within the review area (check all that apply):

  - Length (Linear Feet): __________ Width (feet): __________ Acres: __________

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

- [ ] Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

  - [ ] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW: __________

  - [ ] Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW: __________

  Provide acreage estimates for jurisdictional wetland in the review area: Acres: __________

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

- [ ] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

  Provide acreage estimates for jurisdictional wetland in the review area: Acres: __________

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Feature ID: 134

Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet):  Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section III.C.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
- Other Non-wetland Waters MBR acres:
- Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- Non-wetland waters linear feet (ft), width (ft)
- Other waters acres
- Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:
SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  
July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  
Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 135
State: AZ  County/Parish/borough: Pinal County  City: N/A
Center coordinates of site: Lat. 32.8482°N  Long. -111.2599°W

Name of nearest waterbody: 

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: 
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☐ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)
☐ Office (Desk) Determination. Date:  
☐ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There are No navigable waters of the U.S. within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There are No waters of the U.S. within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters [ ] Linear Feet [ ] Width (ft) and/or [ ] Acres
      Wetlands Acres: [ ]

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☐ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1; only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1; otherwise, see Section III.B below.

1. TNW

   Identify TNW: 

   Summarize rationale supporting determination:

2. Wetland adjacent to TNW

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e., tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

   | Watershed Size (sq mi): | 49650 |
   | Drainage Area (sq mi):  | 0.00347 |
   | Average Annual Rainfall (in): | 10 |
   | Average Annual Snowfall (in): | 0 |

   (ii) Physical Characteristics:

   (a) Relationship with TNW

   □ Tributary flows directly to TNW
   ✔ Tributary flows through 4 tributaries before entering TNW

   Project waters are 30 (or more) river miles from TNW
(b) General Tributary Characteristics

Tributary is: Natural

Explain: 

Tributary properties with respect to top of bank (estimate):

- Average Width (ft):
- Average Depth (ft):
- Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- Silts
- Sands
- Concrete
- Muck
- Cobbles
- Gravel
- Substrate - Vegetation

Other, Explain:

Tributary Condition/Stability [e.g., highly eroding, sloughing banks]. Explain: Stable.

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

Tributary Geometry: Relatively Straight

Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow

Estimate average number of flow events in review area/year: 2-5

Describe Flow Regime: Ephemeral.

Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined Characteristics:

Subsurface Flow: No Explain:

- □ Dye (or other) test performed:

Tributary Has (Check all that apply):

- □ Bed and Banks
- □ OHWM (check all the apply): OHWM Indicators:
  - □ Clear, natural line impressed on the bank
  - □ Changes in soil character
  - □ Shelving
  - □ Vegetation matted down, bent or absent
  - □ Leaf litter disturbed or washed away
  - □ Sediment deposition
  - □ Water staining

  Other (list):

- □ Discontinuous? Explain:
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

[ ] High tide line indicated by: [ ] Mean High water Mark indicated by:

[ ] oil or scum line along shore objects [ ] survey to available datum
[ ] fine shell or debris deposits (foreshore) [ ] physical markings
[ ] tidal gauges [ ] vegetation lines/changes in vegetation types
[ ] other

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

**Explain:**

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

[ ] Wetland Directly Abutting Non-TNW

[ ] Wetland Not Directly Abutting Non-TNW

[ ] Discrete wetland hydrologic connection Explain:

[ ] Ecological connection Explain:

[ ] Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:
(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).

Explain ________________________________________________________________

Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

☐ Riparian Buffer Characteristics (type, average width): ___________________________

☐ Vegetation type/percent cover. Explain: ____________________________

Habitat for:

☐ Federally Listed Species Explain: ____________________________

☐ Fish/Spawn Areas Explain: ____________________________

☐ Other environmentally-sensitive species Explain: ____________________________

☐ Aquatic/Wildlife Diversity Explain: ____________________________

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis: ____________________________

Wetland acres in total being considered in cumulative analysis: ____________________________

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?

• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?

• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:
   - TNWs
   - Linear Feet: Width (ft): TNW Acres
   - Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs
   - Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:
   - Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
     - Provide estimates for jurisdictional waters in the review area (check all that apply):
       - Tributary waters Linear Feet: Width (ft).
       - Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.
   - Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.C.
     - Provide estimates of jurisdictional waters within the review area (check all that apply):
       - Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.
   - Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
     - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:
       - Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW
   - Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
     - Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet):  _______  Acres:  _______

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus:  See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams):  linear feet :  _______  width (ft):  _______

☐ Other Non-wetland Waters MBR  acres:  _______

☐ Wetlands MBR  acres:  _______

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters  350.62 linear feet (ft),  3.67 width (ft)

☐ Other waters  _______ acres

☐ Wetlands  _______ acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  
July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  
Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 136

State: AZ  
County/Parish/borough: Pinal County  
City: N/A

Center coordinates of site: Lat. 32.8482°N  
Long. -111.2599°W

Name of nearest waterbody:  
Gila River between Powers Butte and Gillespie Dam

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:  

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☐ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request  
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:  
☐ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.  
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)  
☐ Wetlands adjacent to TNWs  
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs  
☐ Non-RPWs that flow directly or indirectly into TNWs  
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs  
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs  
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs  
☐ Impoundments of jurisdictional waters  
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

C. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drains is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: [ ] Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts a RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:
      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.12572
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:
       (a) Relationship with TNW
          ☑ Tributary flows directly to TNW
          [ ] Tributary flows through [ ] tributaries before entering TNW
          Project waters are [30 (or more)] river miles from TNW
Project waters are river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:

Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural
Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft):
Average Depth (ft):
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- [ ] Silts
- [ ] Sands
- [x] Concrete
- [ ] Muck
- [ ] Cobbles
- [x] Gravel
- [ ] Substrate - Vegetation
- [ ] Other, Explain:

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.]
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.

Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined
Characteristics:
Subsurface Flow: No
Explain:

[ ] Dye (or other) test performed:

Tributary Has (Check all that apply):
- [ ] Bed and Banks
- [x] OHWM (check all the apply): OHWM Indicators:
  - [ ] Clear, natural line impressed on the bank
  - [x] Changes in soil character
  - [x] Shelving
  - [ ] Vegetation matted down, bent or absent
  - [ ] Leaf litter disturbed or washed away
  - [ ] Sediment deposition
  - [ ] Water staining
  - [ ] Presence of litter and debris
  - [ ] Destruction of terrestrial vegetation
  - [ ] Presence of wrack line
  - [ ] Sediment sorting
  - [x] Scour
  - [ ] Multiple observed or predicted flow events
  - [ ] Abrupt change in plant community

Other (list):

[ ] Discontinuous? Explain:
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

- High tide line indicated by: ____________________________
- oil or scum line along shore objects
- fine shell or debris deposits (foreshore)
- physical markings/characteristics
- tidal gauges
- other

- Mean High water Mark indicated by: ______________________
- survey to available datum
- physical markings
- vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain: ____________________________

Identify Specific Pollutants, if known: ____________________________

(iv) Biological Characteristics. Channel supports (check all that apply):

- Riparian Corridor Characteristics: ____________________________
- Wetland Fringe Characteristics: ____________________________

Habitat for:

- Federally Listed Species Explain findings: ____________________________
- Fish/Spawn Areas Explain findings: ____________________________
- Other environmentally-sensitive species Explain findings: ____________________________
- Aquatic/Wildlife diversity Explain: ____________________________

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

- Wetland Size (ac): ____________________________
- Wetland Type, Explain: ____________________________
- Wetland Quality, Explain: ____________________________

Project Wetlands Cross or Serve as State Boundaries, Explain: ____________________________

(b) General Flow Relationship with Non-TNW:

- Wetland Flow is: ____________________________ Explain: ____________________________
- Surface Flow is: ____________________________

Characteristics: ____________________________

Subsurface Flow: ____________________________ Explain Findings: ____________________________

(c) Wetland Adjacency Determination with Non-TNW:

- Wetland Not Directly Abutting Non-TNW
- Wetland Not Directly Abutting Non-TNW

- Discrete wetland hydrologic connection Explain: ____________________________
- Ecological connection Explain: ____________________________
- Separated by berm/barrier Explain: ____________________________

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW: ____________________________
Project Wetlands: Aerial Miles from TNW: ____________________________

Flow is From: ____________________________

Estimate approximate Location of Wetland within Floodplain: ____________________________
(ii) Chemical Characteristics:
Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).

Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- Riparian Buffer  Characteristics (type, average width):
- Vegetation  type/percent cover. Explain:
- Habitat for:
  - Federally Listed Species  Explain:
  - Fish/Spawn Areas  Explain:
  - Other environmentally-sensitive species  Explain:
  - Aquatic/Wildlife Diversity  Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downstream flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage...
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:
   -TNWs
   -Linear Feet: ___________________________ Width (ft): ___________________________ TNW Acres
   -Wetlands adjacent to TNWs: Acres: ___________________________

2. RPWs that flow directly or indirectly into TNWs
   -Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

   -Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
     -Provide estimates for jurisdictional waters in the review area (check all that apply):
     -Tributary waters
     -Linear Feet: ___________________________ Width (Ft): ___________________________
     -Other non-wetland waters:
     -Acres: ___________________________

3. Non-RPWs that flow directly or indirectly into TNWs.
   -Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.
   -Provide estimates of jurisdictional waters within the review area (check all that apply):
     -Length (Linear Feet): ___________________________ Width (feet): ___________________________ Acres: ___________________________

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.
   -Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     -Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
     -Provide acreage estimates for jurisdictional wetland in the review area: Acres: ___________________________

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW
   -Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
   -Provide acreage estimates for jurisdictional wetland in the review area: Acres: ___________________________

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): __________  Acres: __________

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section III.C.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): length: __________  width (ft): __________
☐ Other Non-wetland Waters MBR acres: __________
☐ Wetlands MBR acres: __________

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 556.25 linear feet (ft), 4.87 width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.
☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:
This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION
A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  July 5, 2013
B. DISTRICT OFFICE, FILE NAME, AND NUMBER  Los Angeles District, File No. Pending
C. PROJECT LOCATION AND BACKGROUND INFORMATION:  Drainage Feature  137
  State: AZ  County/Parish/borough: Pinal  City: N/A
  Center coordinates of site: Lat. 32.8482°N  Long. -111.2599°W
  Name of nearest waterbody: 
  Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: 
  Name of watershed or Hydrologic Unit Code (HUC): 15050100
  ☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
  ☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)
  ☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS
A. RHA SECTION 10 DETERMINATION OF JURISDICTION
  There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.
  ☐ Waters subject to the ebb and flow of the tide.
  ☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION
  There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.
  1. Waters of the U.S.
     a. Indicate presence of water of U.S. in review area (Check all the apply):
        ☐ TNWs (new)
        ☐ Wetlands adjacent to TNWs
        ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
        ☐ Non-RPWs that flow directly or indirectly into TNWs
        ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
        ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
        ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
        ☐ Impoundments of jurisdictional waters
        ☐ Isolated (interstate or intrastate) waters, including isolated wetlands
     b. Identify (estimate) size of waters of the U.S. in the review area
        Non-Wetlands waters Linear Feet Width (ft) and/or Acres
        Wetlands Acres:
     c. Limits (boundaries) of Jurisdiction based on:
  2. Non-Regulated Waters/Wetlands (check if applicable):
     ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
     Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ____________________________ □ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.07861
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0
   (ii) Physical Characteristics:
      (a) Relationship with TNW
         □ Tributary flows directly to TNW
         ☑ Tributary flows through 4 tributaries before entering TNW
         Project waters are 30 (or more) river miles from TNW
(b) General Tributary Characteristics

Tributary is: Natural

Tributary properties with respect to top of bank (estimate):
- Average Width (ft): 
- Average Depth (ft): 
- Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- Silts
- Cobble
- Bedrock
- Sands
- Concrete
- Gravel
- Substrate - Vegetation
- Muck
- Other, Explain: 

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

Tributary Geometry: Relatively Straight

Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow

Estimate average number of flow events in review area/year: 2-5

Describe Flow Regime: Ephemeral.

Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined

Subsurface Flow: No

Dye (or other) test performed: 

Tributary Has (Check all that apply):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis: 

Wetland acres in total being considered in cumulative analysis: 

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. **TNWs and Adjacent Wetlands.** Check all that apply and provide size estimates in review area:

<table>

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION  
There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION  
There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)  
      ☐ Wetlands adjacent to TNWs  
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs  
      ☐ Non-RPWs that flow directly or indirectly into TNWs  
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs  
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs  
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs  
      ☐ Impoundments of jurisdictional waters  
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands
   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters Linear Feet Width (ft) and/or Acres
      Wetlands Acres:
   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
   ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
      Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ___________________________  □ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

<table>
<thead>
<tr>

SECTION II: SUMMARY OF FINDINGS
A. RHA SECTION 10 DETERMINATION OF JURISDICTION
There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION
There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands
   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters _______ Linear Feet _______ Width (ft) and/or _______ Acres
      Wetlands Acres: _______
   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

   Identify TNW: [ ]
   [ ] Vegetation

   Summarize rationale supporting determination:

2. Wetland adjacent to TNW

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 0.82725
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:

   (a) Relationship with TNW

   [ ] Tributary flows directly to TNW
   [ ] Tributary flows through 4 tributaries before entering TNW

   Project waters are 30 (or more) river miles from TNW
Project waters are river Miles from tributary to RPW:

Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage...
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:
   □ TNWs  Linear Feet:  Width (ft):  TNW Acres
   □ Wetlands adjacent to TNWs:  Acres:

2. RPWs that flow directly or indirectly into TNWs
   □ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

   □ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

   Provide estimates for jurisdictional waters in the review area (check all that apply):
   □ Tributary waters  Linear Feet:  Width (Ft).
   □ Other non-wetland waters:  Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.
   □ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

   Provide estimates of jurisdictional waters within the review area (check all that apply):
   Length (Linear Feet):  Width (feet):  Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.
   □ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

   □ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

   □ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

   Provide acreage estimates for jurisdictional wetland in the review area:  Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW
   □ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide acreage estimates for jurisdictional wetland in the review area:  Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale: __________________________
Length (linear feet): _______ Acres: _______

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): _______ linear feet: _______ width (ft): _______
☐ Other Non-wetland Waters MBR _______ acres: _______
☐ Wetlands MBR _______ acres: _______

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☐ Non-wetland waters _______ 1928.80 linear feet (ft), _______ 9.84 width (ft)
☐ Other waters _______ acres
☐ Wetlands _______ acres

**SECTION II: SUMMARY OF FINDINGS**

A. RHA SECTION 10 DETERMINATION OF JURISDICTION
   - There **Are No** "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.
   - Waters subject to the ebb and flow of the tide.
   - Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION
   - There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.
   1. Waters of the U.S.
      a. Indicate presence of water of U.S. in review area (Check all the apply):
         - TNWs (new)
         - Wetlands adjacent to TNWs
         - Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
         - Non-RPWs that flow directly or indirectly into TNWs
         - Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
         - Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
         - Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
         - Impoundments of jurisdictional waters
         - Isolated (interstate or intrastate) waters, including isolated wetlands
      b. Identify (estimate) size of waters of the U.S. in the review area
         - Non-Wetlands waters __________ Linear Feet __________ Width (ft) and/or __________ Acres
         - Wetlands Acres: __________
      c. Limits (boundaries) of Jurisdiction based on:
   2. Non-Regulated Waters/Wetlands (check if applicable):
      - Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
        Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

<table>
<thead>
<tr>
<th>Identify TNW:</th>
<th>□ Vegetation</th>
</tr>
</thead>
</table>

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

   | Watershed Size (sq mi): | 49650 |
   | Drainage Area (sq mi):  | 0.20101 |
   | Average Annual Rainfall (in): | 10 |
   | Average Annual Snowfall (in): | 0 |

   (ii) Physical Characteristics:

   (a) Relationship with TNW

       □ Tributary flows directly to TNW
       ✔ Tributary flows through 4 tributaries before entering TNW

       Project waters are 30 (or more) river miles from TNW
Approved Jurisdictional Determination Form
U.S. Army Corps of Engineers

Feature ID: 14

Project waters are river Miles from tributary to RPW: 
Project waters are (or more) aerial (straight) miles from tributary to TNW: 
Project waters are aerial (straight) miles from tributary to RPW: 
Project waters cross or serve as state boundaries. Explain: 

Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: 

Tributary properties with respect to top of bank (estimate):

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review area (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): ___ Acres: ___

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters ___

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: ___ width (ft): ___
☐ Other Non-wetland Waters MBR acres: ___
☐ Wetlands MBR acres: ___

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1390.17 linear feet (ft), 3.77 width (ft)
☐ Other waters acres
☐ Wetlands acres

Additional Comments to Support JD:
SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION:  Drainage Feature 140

State:  AZ  County/Parish/borough:  Pinal County  City:  N/A

Center coordinates of site:  Lat.  32.8482°N  Long.  -111.2599°W

Name of nearest waterbody:  

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:  Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC):  15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination.  Date:  
☑ Field Determination.  Date(s):  10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters  Linear Feet  Width (ft) and/or  Acres
      Wetlands Acres:  

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

   Explain:  Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. **TNW**
   - Identify TNW: [Blank]
   - Vegetation: [Blank]
   - Summarize rationale supporting determination:

2. **Wetland adjacent to TNW**
   - Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary, that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   - (i) General Area Conditions:
     - Watershed Size (sq mi): 49650
     - Drainage Area (sq mi): 0.01034
     - Average Annual Rainfall (in): 10
     - Average Annual Snowfall (in): 0
   - (ii) Physical Characteristics:
     - [Blank] Tributary flows directly to TNW
     - [Blank] Tributary flows through [Blank] tributaries before entering TNW
     - Project waters are [Blank] river miles from TNW
Project waters are river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics
Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft): 
Average Depth (ft): 
Average Side Slopes: 3:1
Primary tributary substrate composition (check all that apply):
- Silts
- Gravel
- Substrate - Vegetation
- Other, Explain: 
Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.

(c) Flow:
Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume:
Surface Flow is: Discrete and Confined Characteristics: 
Subsurface Flow: No Explain: 
Dye (or other) test performed: 
Tributary Has (Check all that apply):
- Bed and Banks
- OHWM (check all the apply): OHWM Indicators:
  - Clear, natural line impressed on the bank
  - Changes in soil character
  - Shelving
  - Vegetation matted down, bent or absent
  - Leaf litter disturbed or washed away
  - Sediment deposition
  - Water staining
  - Presence of litter and debris
  - Destruction of terrestrial vegetation
  - Presence of wrack line
  - Sediment sorting
  - Scour
  - Multiple observed or predicted flow events
  - Abrupt change in plant community
Other (list): 
Discontinuous? Explain: 
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

- High tide line indicated by: 
- Oil or scum line along shore objects
- Fine shell or debris deposits (foreshore)
- Physical markings/characteristics
- Tidal gauges
- Other

- Mean High Water Mark indicated by: 
- Survey to available datum
- Physical markings
- Vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

☐ Riparian Buffer Characteristics (type, average width):

☐ Vegetation type/percent cover. Explain:

Habitat for:

☐ Federally Listed Species Explain:

☐ Fish/Spawn Areas Explain:

☐ Other environmentally-sensitive species Explain:

☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downstream flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

### D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. **TNWs and Adjacent Wetlands.** Check all that apply and provide size estimates in review area:

   - [ ] TNWs  
     - Linear Feet: [ ] Width (ft): [ ] TNW Acres: [ ]
   - [ ] Wetlands adjacent to TNWs: Acres: [ ]

2. **RPWs that flow directly or indirectly into TNWs**

   - [ ] Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial: [ ]
   - [ ] Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: [ ]
     - Provide estimates for jurisdictional waters in the review area (check all that apply):
       - [ ] Tributary waters  
         - Linear Feet: [ ] Width (ft): [ ] Acres: [ ]
       - [ ] Other non-wetland waters: Acres: [ ]

3. **Non-RPWs that flow directly or indirectly into TNWs.**

   - [ ] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

     Provide estimates of jurisdictional waters within the review area (check all that apply):

     - Length (Linear Feet): [ ] Width (feet): [ ] Acres: [ ]

4. **Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.**

   - [ ] Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abuttine and RPW: [ ]
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW: [ ]

     Provide acreage estimates for jurisdictional wetland in the review area: Acres: [ ]

5. **Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW**

   - [ ] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

     Provide acreage estimates for jurisdictional wetland in the review area: Acres: [ ]

6. **Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.**
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): _______ Acres: _______

F. NON‐JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: _______ width (ft): _______

☐ Other Non-wetland Waters MBR acres: _______

☐ Wetlands MBR acres: _______

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☐ Non-wetland waters _______ linear feet (ft), 715.86 width (ft) 4.72

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  
July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  
Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 141

State: AZ  
County/Parish/borough: Pinal County  
City: N/A

Center coordinates of site:  
Lat. 32.8482°N  
Long. -111.2599°W

Name of nearest waterbody:  
Gila River between Powers Butte and Gillespie Dam

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:  
Pending

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☐ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination.  
Date:

☑ Field Determination.  
Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION
There ☐ "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There ☐ "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)

☐ Wetlands adjacent to TNWs

☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs

☐ Non-RPWs that flow directly or indirectly into TNWs

☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs

☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs

☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs

☐ Impoundments of jurisdictional waters

☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ___________________________ ☐ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.00417
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0
   (ii) Physical Characteristics:
      (a) Relationship with TNW
         ☑ Tributary flows directly to TNW
         ☐ Tributary flows through ___ tributaries before entering TNW
         Project waters are 30 (or more) river miles from TNW
**Feature ID:** 141

**U.S Army Corps of Engineers**

Project waters are river Miles from tributary to RPW: __________
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW: __________
Project waters are aerial (straight) miles from tributary to RPW: __________
Project waters cross or serve as state boundaries. Explain: __________

Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

### (b) General Tributary Characteristics

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?, size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

### D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. **TNWs and Adjacent Wetlands.** Check all that apply and provide size estimates in review area:
   - [ ] TNWs
   - [ ] Wetlands adjacent to TNWs

   **Linear Feet:** Width (ft): TNW Acres

2. **RPWs that flow directly or indirectly into TNWs**
   - [ ] Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:
   - [ ] Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
     - Provide estimates for jurisdictional waters in the review area (check all that apply):
       - [ ] Tributary waters
       - [ ] Other non-wetland waters

   **Linear Feet:** Width (ft): Acres

3. **Non-RPWs that flow directly or indirectly into TNWs.**
   - [ ] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.C.
   - Provide estimates of jurisdictional waters within the review area (check all that apply):
     - Length (Linear Feet): Width (feet): Acres

4. **Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.**
   - [ ] Wetlands directly abutting RPW and thus are jurisdictional as adjacent wetlands.
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:
   - Provide acreage estimates for jurisdictional wetland in the review area: Acres

5. **Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW**
   - [ ] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
   - Provide acreage estimates for jurisdictional wetland in the review area: Acres

6. **Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.**
Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
- Other Non-wetland Waters MBR acres:
- Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- Non-wetland waters linear feet (ft), width (ft)
- Other waters acres
- Wetlands acres

SECTION IV: DATA SOURCES

☐ Office (Desk) Determination. Date: 
☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated ( interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters Linear Feet Width (ft) and/or Acres
      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ____________________________ □ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 0.04308
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:

   (a) Relationship with TNW

   □ Tributary flows directly to TNW
   □ Tributary flows through 4 tributaries before entering TNW
   Project waters are 30 (or more) river miles from TNW
Project waters cross or serve as state boundaries. Explain:

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

### (b) General Tributary Characteristics

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S. Army Corps of Engineers

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)
   July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER
   Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 143
   State: AZ  City: N/A
   County/Parish/borough: Pinal  Lat. 32.8482°N
   Center coordinates of site:  Long. -111.2599°W
   Name of nearest waterbody: Gila River between Powers Butte and Gillespie Dam
   Name of watershed or Hydrologic Unit Code (HUC): 15050100

☐ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a
  different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)
   ☑ Field Determination. Date: 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION
   There are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in
   the review area.
   ☐ Waters subject to the ebb and flow of the tide.
   ☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION
   There are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.
   1. Waters of the U.S.
      a. Indicate presence of water of U.S. in review area (Check all the apply):
         ☐ TNWs (new)
         ☐ Wetlands adjacent to TNWs
         ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
         ☐ Non-RPWs that flow directly or indirectly into TNWs
         ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
         ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
         ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
         ☐ Impoundments of jurisdictional waters
         ☐ Isolated (interstate or intrastate) waters, including isolated wetlands
      b. Identify (estimate) size of waters of the U.S. in the review area
         Non-Wetlands waters ___________ Linear Feet  Width (ft) and/or ___________ Acres
         Wetlands Acres: ___________
      c. Limits (boundaries) of Jurisdiction based on:
   2. Non-Regulated Waters/Wetlands (check if applicable):
      ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
      Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered
      jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a
      significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ____________________________  ☐ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.15446
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0
   (ii) Physical Characteristics:
      (a) Relationship with TNW
         ☐ Tributary flows directly to TNW  ☑ Tributary flows through 4 tributaries before entering TNW
         Project waters are 30 (or more) river miles from TNW
**Feature ID:** 143

**U.S. Army Corps of Engineers**

Project waters are river Miles from tributary to RPW: [ ]
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW: [ ]
Project waters are aerial (straight) miles from tributary to RPW: [ ]

Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir,McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

**(b) General Tributary Characteristics**

Tributary is: Natural [ ]

Tributary properties with respect to top of bank (estimate):

- Average Width (ft): [ ]
- Average Depth (ft): [ ]
- Average Side Slopes: 3:1 [ ]

Primary tributary substrate composition (check all that apply):

- ☑ Silts
- ☑ Sands
- ☑ Concrete
- ☑ Muck
- ☑ Gravel
- ☑ Substrate - Vegetation
- Other, Explain: [ ]

Tributary Condition/ Stability [e.g., highly eroding, sloughing banks. Explain: Stable.

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

Tributary Geometry: Relatively Straight [ ]

Tributary Gradient (approximate average slope): 1% [ ]

**(c) Flow:**

Tributary Provides for: Ephemeral Flow [ ]

Estimate average number of flow events in review area/year: 2-5 [ ]

Describe Flow Regime: Ephemeral. [ ]

Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined [ ]

Subsurface Flow: No [ ]

☐ Dye (or other) test performed: [ ]

Tributary Has (Check all that apply):

- ☐ Bed and Banks
- ☑ OHWM (check all the apply): OHWM Indicators:
  - ☑ Clear, natural line impressed on the bank
  - ☑ Changes in soil character
  - ☑ Shelving
  - ☑ Vegetation matted down, bent or absent
  - ☑ Leaf litter disturbed or washed away
  - ☑ Sediment deposition
  - ☑ Water staining
- Other (list): [ ]

☐ Discontinuous? Explain: [ ]
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

- High tide line indicated by: [ ]
- Mean High water Mark indicated by: [ ]
- oil or scum line along shore objects [ ]
- fine shell or debris deposits (foreshore) [ ]
- physical markings/characteristics [ ]
- tidal gauges [ ]
- other [ ]

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

- Riparian Corridor Characteristics:
- Wetland Fringe Characteristics:

Habitat for:

- Federally Listed Species Explain findings:
- Fish/Spawn Areas Explain findings:
- Other environmentally-sensitive species Explain findings:
- Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

- Wetland Size (ac):
- Wetland Type, Explain:
- Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: Explain:

Surface Flow is:

Characteristics:

Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- Wetland Not Directly Abutting Non-TNW
- Discrete wetland hydrologic connection Explain:
- Ecological connection Explain:
- Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:
(ii) Chemical Characteristics:
Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).

Explain:

Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- Riparian Buffer Characteristics (type, average width):
- Vegetation type/percent cover. Explain:
- Habitat for:
  - Federally Listed Species Explain:
  - Fish/Spawn Areas Explain:
  - Other environmentally-sensitive species Explain:
  - Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

   - [ ] TNWs     Linear Feet: [ ] Width (ft): [ ] TNW Acres [ ]
   - [ ] Wetlands adjacent to TNWs: Acres: [ ]

2. RPWs that flow directly or indirectly into TNWs

   - [ ] Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:
   - [ ] Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
     - Provide estimates for jurisdictional waters in the review area (check all that apply):
       - [ ] Tributary waters Linear Feet: [ ] Width (Ft).
       - [ ] Other non-wetland waters: Acres: [ ]

3. Non-RPWs that flow directly or indirectly into TNWs.

   - [ ] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.
     - Provide estimates of jurisdictional waters within the review area (check all that apply):
       - Length (Linear Feet): [ ] Width (feet): [ ] Acres: [ ]

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

   - [ ] Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:
       - Provide acreage estimates for jurisdictional wetland in the review area: Acres: [ ]

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

   - [ ] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
     - Provide acreage estimates for jurisdictional wetland in the review area: Acres: [ ]

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Feature ID: 143

Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams) linear feet:
☐ Other Non-wetland Waters MBR acres:
☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters linear feet (ft), width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

SECTION II: SUMMARY OF FINDINGS
A. RHA SECTION 10 DETERMINATION OF JURISDICTION
There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.
☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.
B. CWA SECTION 404 DETERMINATION OF JURISDICTION
There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.
1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands
   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters ___________________ Linear Feet __________________ Width (ft) and/or __________________ Acres
      Wetlands Acres: ___________________
   c. Limits (boundaries) of Jurisdiction based on:
2. Non-Regulated Waters/Wetlands (check if applicable):
   ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
      Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: [ ]

☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 0.54750
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:

   (a) Relationship with TNW

   ☐ Tributary flows directly to TNW
   ☑ Tributary flows through 4 tributaries before entering TNW

   Project waters are 30 (or more) river miles from TNW
Project waters are river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are aerial (straight) miles from tributary to RPW:
Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural

Tributary properties with respect to top of bank (estimate):
- Average Width (ft):
- Average Depth (ft):
- Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- [ ] Silts
- [ ] Sands
- [ ] Concrete
- [ ] Muck
- [ ] Cobbles
- [ ] Gravel
- [ ] Substrate - Vegetation
- Other, Explain:

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain]: Stable.

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

Tributary Geometry: Relatively Straight

Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow

Estimate average number of flow events in review area/year: 2-5

Describe Flow Regime: Ephemeral.

Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined

Subsurface Flow: No

[ ] Dye (or other) test performed:

Tributary Has (Check all that apply):

☐ Vegetation type/percent cover. Explain:

Habitat for:

☐ Federally Listed Species Explain:

☐ Fish/Spawn Areas Explain:

☐ Other environmentally-sensitive species Explain:

☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downstream flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

   - TNWs
   - Linear Feet: __________________ Width (ft): ___________ TNW Acres: ___________
   - Wetlands adjacent to TNWs: Acres: ___________

2. RPWs that flow directly or indirectly into TNWs

   - Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

   - Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

      Provide estimates for jurisdictional waters in the review area (check all that apply):

      - Tributary waters Linear Feet: ___________ Width (Ft).
      - Other non-wetland waters: Acres: ___________

3. Non-RPWs that flow directly or indirectly into TNWs.

   - Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.C.

      Provide estimates of jurisdictional waters within the review area (check all that apply):

      Length (Linear Feet): ___________ Width (feet): ___________ Acres: ___________

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

   - Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

      - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

      - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

      Provide acreage estimates for jurisdictional wetland in the review area: Acres: ___________

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

   - Wetlands that do not directly abut an RPW, but when considered in combination with the tributary by which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

      Provide acreage estimates for jurisdictional wetland in the review area: Acres: ___________

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section III.C2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- Non wetland-Waters (i.e., rivers, streams): linear feet:
- Other Non-wetland Waters MBR acres:
- Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- Non-wetland waters 591.85 linear feet (ft), 12.57 width (ft)
- Other waters acres
- Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.
- Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Corps of Engineers

Feature ID: 145

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION
A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013
B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending
C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 145
   State: AZ  County/Parish/borough: Pinal County  City: N/A
   Center coordinates of site: Lat. 32.8482°N  Long. -111.2599°W
   Name of nearest waterbody: Gila River between Powers Butte and Gillespie Dam
   Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Gila River between Powers Butte and Gillespie Dam
   Name of watershed or Hydrologic Unit Code (HUC): 15050100
   ☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
   ☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)
   ☐ Office (Desk) Determination. Date:  
   ☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS
A. RHA SECTION 10 DETERMINATION OF JURISDICTIO
   There are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.
   ☐ Waters subject to the ebb and flow of the tide.
   ☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTIO
   There are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.
   1. Waters of the U.S.
      a. Indicate presence of water of U.S. in review area (Check all the apply):
         ☐ TNWs (new)
         ☐ Wetlands adjacent to TNWs
         ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
         ☐ Non-RPWs that flow directly or indirectly into TNWs
         ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
         ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
         ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
         ☐ Impoundments of jurisdictional waters
         ☐ Isolated (interstate or intrastate) waters, including isolated wetlands
      b. Identify (estimate) size of waters of the U.S. in the review area
         Non-Wetlands waters Linear Feet Width (ft) and/or Acres
         Wetlands Acres:
      c. Limits (boundaries) of Jurisdiction based on:
   2. Non-Regulated Waters/Wetlands (check if applicable):
      ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
      Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ________________________
   ☐ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.01298
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0
   (ii) Physical Characteristics:
      (a) Relationship with TNW
      ☐ Tributary flows directly to TNW
      ☑ Tributary flows through 4 tributaries before entering TNW
      Project waters are 30 (or more) river miles from TNW
**APPROVED JURISDICTIONAL DETERMINATION FORM**

**U.S. Army Corps of Engineers**

Project waters are [ ] river Miles from tributary to RPW:

Project waters are [ ] 30 (or more) aerial (straight) miles from tributary to TNW:

Project waters are [ ] aerial (straight) miles from tributary to RPW:

Project waters cross or serve as state boundaries. Explain:

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

**(b) General Tributary Characteristics**

Tributary is: [ ] Natural

Explain:

Tributary properties with respect to top of bank (estimate):

- Average Width (ft): 
- Average Depth (ft): 
- Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

- [ ] Silts
- [ ] Sands
- [ ] Concrete
- [ ] Muck
- [ ] Cobble
- [ ] Gravel
- [ ] Substrate - Vegetation
- Other, Explain:

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain:] [ ] Stable.

Presence of Run/Riffle/Pool Complexes. Explain: [ ] Not present.

Tributary Geometry: [ ] Relatively Straight

Tributary Gradient (approximate average slope): 1%

**(c) Flow:**

Tributary Provides for: [ ] Ephemeral Flow

Estimate average number of flow events in review area/year: 2-5

Describe Flow Regime: [ ] Ephemeral.

Other Information on Duration and Volume:

Surface Flow is: [ ] Discrete and Confined

Characteristics: 

Subsurface Flow: [ ] No

Explain:

Dye (or other) test performed: 

Tributary Has (Check all that apply):

- [ ] Bed and Banks
- [ ] OHWM (check all the apply): OHWM Indicators:
  - [ ] Clear, natural line impressed on the bank
  - [ ] Changes in soil character
  - [ ] Shelving
  - [ ] Vegetation matted down, bent or absent
  - [ ] Leaf litter disturbed or washed away
  - [ ] Sediment deposition
  - [ ] Water staining

  Other (list):

- [ ] Discontinuous? Explain:

- [ ] Presence of litter and debris
- [ ] Destruction of terrestrial vegetation
- [ ] Presence of wrack line
- [ ] Sediment sorting
- [ ] Scour
- [ ] Multiple observed or predicted flow events
- [ ] Abrupt change in plant community

Other (list):
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

- High tide line indicated by: [ ] 
- Mean High water Mark indicated by: [ ]
- oil or scum line along shore objects [ ]
- fine shell or debris deposits (foreshore) [ ]
- physical markings/characteristics [ ]
- tidal gauges [ ]
- other [ ]

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain: [ ]

Identify Specific Pollutants, if known:

[ ]

(iv) Biological Characteristics. Channel supports (check all that apply):

- Riparian Corridor Characteristics: [ ]
- Wetland Fringe Characteristics: [ ]

Habitat for:

- Federally Listed Species Explain findings: [ ]
- Fish/Spawn Areas Explain findings: [ ]
- Other environmentally-sensitive species Explain findings: [ ]
- Aquatic/Wildlife diversity Explain: [ ]

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:
- Wetland Size (ac): [ ]
- Wetland Type, Explain: [ ]
- Wetland Quality, Explain: [ ]

Project Wetlands Cross or Serve as State Boundaries, Explain: [ ]

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: [ ]

Surface Flow is: [ ]

Characteristics:

Subsurface Flow: [ ] Explain Findings: [ ]

(c) Wetland Adjacency Determination with Non-TNW:

- Wetland Not Directly Abutting Non-TNW [ ]
- Discrete wetland hydrologic connection Explain: [ ]
- Ecological connection Explain: [ ]
- Separated by berm/barrier Explain: [ ]

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW: [ ]

Project Wetlands: Aerial Miles from TNW: [ ]

Flow is From: [ ]

Estimate approximate Location of Wetland within Floodplain: [ ]
(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).

Explain

Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- □ Riparian Buffer  Characteristics (type, average width):
- □ Vegetation  type/percent cover. Explain:
- □ Habitat for:
  - □ Federally Listed Species  Explain:
  - □ Fish/Spawn Areas  Explain:
  - □ Other environmentally-sensitive species  Explain:
  - □ Aquatic/Wildlife Diversity  Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage...
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:
   - TNWs Linear Feet: Width (ft): TNW Acres
   - Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs
   - Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:
   - Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
     - Provide estimates for jurisdictional waters in the review area (check all that apply):
       - Tributary waters Linear Feet: Width (Ft).
       - Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.
   - Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.
   - Provide estimates of jurisdictional waters within the review area (check all that apply):
     - Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.
   - Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
     - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:
       - Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW
   - Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
     - Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres): __________

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction: __________

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale: __________

Length (linear feet): ______ Acres: ______

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): ______ linear feet: ______ width (ft): ______

☐ Other Non-wetland Waters MBR ______ acres:

☐ Wetlands MBR ______ acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☐ Non-wetland waters ______ linear feet (ft), ______ acres

☐ Other waters ______ acres

☐ Wetlands ______ acres

**A. RHA SECTION 10 DETERMINATION OF JURISDICTION**

There are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

**B. CWA SECTION 404 DETERMINATION OF JURISDICTION**

There are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):

      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area

      Non-Wetlands waters Linear Feet Width (ft) and/or Acres
      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ________________________ ☐ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary, that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

A tributary that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.00993
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0
   (ii) Physical Characteristics:
      (a) Relationship with TNW
         ☐ Tributary flows directly to TNW
         ☑ Tributary flows through 4 tributaries before entering TNW
         Project waters are 30 (or more) river miles from TNW
(b) General Tributary Characteristics

Tributary is: Natural

Tributary properties with respect to top of bank (estimate):
- Average Width (ft): 
- Average Depth (ft): 
- Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- Silts
- Sands
- Concrete
- Gravel
- Bedrock
- Substrate - Vegetation
- Muck
- Other, Explain: 

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

Tributary Geometry: Relatively Straight

Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow

Estimate average number of flow events in review area/year: 2-5

Describe Flow Regime: Ephemeral.

Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined

Subsurface Flow: No

Dye (or other) test performed: 

Tributary Has (Check all that apply):
- Bed and Banks
- OHWM (check all the apply): OHWM Indicators:
  - Clear, natural line impressed on the bank
  - Changes in soil character
  - Shelving
  - Vegetation matted down, bent or absent
  - Leaf litter disturbed or washed away
  - Sediment deposition
  - Water staining
  - Presence of litter and debris
  - Destruction of terrestrial vegetation
  - Presence of wrack line
  - Sediment sorting
  - Scour
  - Multiple observed or predicted flow events
  - Abrupt change in plant community

Discontinuous? Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

- [ ] TNWs          Linear Feet:  Width (ft):  TNW Acres
- [ ] Wetlands adjacent to TNWs:  Acres:

2. RPWs that flow directly or indirectly into TNWs

- [ ] Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:
- [ ] Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
  - Provide estimates for jurisdictional waters in the review area (check all that apply):
    - [ ] Tributary waters          Linear Feet:  Width (ft).
    - [ ] Other non-wetland waters:  Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

- [ ] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.C.
  - Provide estimates of jurisdictional waters within the review area (check all that apply):
    - Length (Linear Feet):  Width (feet):  Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

- [ ] Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
  - [ ] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
  - [ ] Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:
    - Provide acreage estimates for jurisdictional wetland in the review area:  Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

- [ ] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
  - Provide acreage estimates for jurisdictional wetland in the review area:  Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): Acres:

F. NON‐JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non‐Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non‐jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non‐wetland‐Waters (i.e., rivers, streams): linear feet: width (ft):
☐ Other Non‐wetland Waters MBR acres:
☐ Wetlands MBR acres:

Provide acreage estimates for non‐jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non‐wetland waters linear feet (ft), width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)  
- Office (Desk) Determination. Date:  
- Field Determination. Date(s): 10/2012

**SECTION II: SUMMARY OF FINDINGS**

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There **Are No** "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

- Waters subject to the ebb and flow of the tide.
- Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      - TNWs (new)
      - Wetlands adjacent to TNWs
      - Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      - Non-RPWs that flow directly or indirectly into TNWs
      - Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      - Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      - Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      - Impoundments of jurisdictional waters
      - Isolated (interstate or intrastate) waters, including isolated wetlands
   b. Identify (estimate) size of waters of the U.S. in the review area
      - Non-Wetlands waters Linear Feet Width (ft) and/or Acres
      - Wetlands Acres: 
   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
   - Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
   - Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. **TNW**
   - Identify TNW: 
   - ☐ Vegetation

   **Summarize rationale supporting determination:**

2. **Wetland adjacent to TNW**
   - Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a wetland that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   - **(i) General Area Conditions:**
     - Watershed Size (sq mi): 49650
     - Drainage Area (sq mi): 0.00117
     - Average Annual Rainfall (in): 10
     - Average Annual Snowfall (in): 0
   - **(ii) Physical Characteristics:**
     - **(a) Relationship with TNW**
       - ☐ Tributary flows directly to TNW
       - ☑ Tributary flows through 4 tributaries before entering TNW
       - Project waters are 30 (or more) river miles from TNW
Project waters are river Miles from tributary to RPW: 
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW: 
Project waters are aerial (straight) miles from tributary to RPW: 
Project waters cross or serve as state boundaries. Explain: 

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downstream flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

   - TNWs Linear Feet: ________ Width (ft): ________ TNW Acres ________
   - Wetlands adjacent to TNWs: Acres: ________

2. RPWs that flow directly or indirectly into TNWs

   - Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial: ________
   - Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: ________
     Provide estimates for jurisdictional waters in the review area (check all that apply):
     - Tributary waters Linear Feet: ________ Width (ft): ________
     - Other non-wetland waters: Acres: ________

3. Non-RPWs that flow directly or indirectly into TNWs.

   - Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.C.

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

   - Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW: ________
     - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW: ________
     Provide acreage estimates for jurisdictional wetland in the review area: Acres: ________

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

   - Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

     Provide acreage estimates for jurisdictional wetland in the review area: Acres: ________

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): 

Acres: 

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft): 
- Other Non-wetland Waters MBR acres: 
- Wetlands MBR acres: 

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- Non-wetland waters linear feet (ft), width (ft)
- Other waters acres
- Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:
This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

**SECTION I: BACKGROUND INFORMATION**

**A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)**

| Date: | July 5, 2013 |

**B. DISTRICT OFFICE, FILE NAME, AND NUMBER**

| Name | Los Angeles District, File No. Pending |

**C. PROJECT LOCATION AND BACKGROUND INFORMATION:**

| Drainage Feature | 148 |

| State: | AZ |
| County/Parish/borough: | Pinal County |
| City: | N/A |

| Center coordinates of site: | Lat. 32.8482°N Long. -111.2599°W |

| Name of nearest waterbody: |  |

| Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: | Gila River between Powers Butte and Gillespie Dam |

| Name of watershed or Hydrologic Unit Code (HUC): | 15050100 |

- [ ] Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
- [ ] Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

**SECTION II: SUMMARY OF FINDINGS**

**A. RHA SECTION 10 DETERMINATION OF JURISDICTION**

| There | Are No |

- [ ] Navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

- [ ] Waters subject to the ebb and flow of the tide.

- [ ] Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

**B. CWA SECTION 404 DETERMINATION OF JURISDICTION**

| There | Are No |

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):

   - [ ] TNWs (new)
   - [ ] Wetlands adjacent to TNWs
   - [ ] Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
   - [ ] Non-RPWs that flow directly or indirectly into TNWs
   - [ ] Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
   - [ ] Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
   - [ ] Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
   - [ ] Impoundments of jurisdictional waters
   - [ ] Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area

   | Non-Wetlands waters | Linear Feet | Width (ft) and/or Acres |
   | Wetlands Acres: |  |

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

   - [ ] Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

   | Explain: | Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW. |
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ___________________________  ☐ Vegetation

   Summarize rationale supporting determination:

2. Wetland adjacent to TNW

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary, that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   i) General Area Conditions:
      
      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.15241
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0

   ii) Physical Characteristics:

      a) Relationship with TNW

      ☐ Tributary flows directly to TNW
      ☑ Tributary flows through 4 tributaries before entering TNW

      Project waters are 30 (or more) river miles from TNW
Project waters are river Miles from tributary to RPW:  
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:  
Project waters are aerial (straight) miles from tributary to RPW:  
Project waters cross or serve as state boundaries. Explain:  
Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely deterministic of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There ☐ Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There ☐ Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands
   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters Linear Feet Width (ft) and/or Acres
      Wetlands Acres:
   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
   ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
      Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. **TNW**
   
   Identify TNW: 
   
   Summarize rationale supporting determination:

2. **Wetland adjacent to TNW**

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a wetland that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) **General Area Conditions:**
   
   Watershed Size (sq mi): 49650
   
   Drainage Area (sq mi): 0.06118
   
   Average Annual Rainfall (in): 10
   
   Average Annual Snowfall (in): 0

   (ii) **Physical Characteristics:**

   (a) **Relationship with TNW**
   
   [ ] Tributary flows directly to TNW
   
   [ ] Tributary flows through 4 tributaries before entering TNW

   Project waters are 30 (or more) river miles from TNW
Project waters are river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft):
Average Depth (ft):
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- [ ] Silts
- [ ] Sands
- [ ] Concrete
- [ ] Muck
- [ ] Cobble
- [ ] Gravel
- [ ] Substrate - Vegetation
- Other, Explain:

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

Tributary Geometry: Relatively Straight

Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow

Estimate average number of flow events in review area/year: 2-5

Describe Flow Regime: Ephemeral.

Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined Characteristics:
Subsurface Flow: No Explain:

[ ] Dye (or other) test performed:

Tributary Has (Check all that apply):

- [ ] Bed and Banks
- [ ] OHWM (check all the apply): OHWM Indicators:
  - [ ] Clear, natural line impressed on the bank
  - [ ] Changes in soil character
  - [ ] Shelving
  - [ ] Vegetation matted down, bent or absent
  - [ ] Leaf litter disturbed or washed away
  - [ ] Sediment deposition
  - [ ] Water staining
  - Other (list):

- [ ] Discontinuous? Explain:
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

- High tide line indicated by: ____________________________
- Mean High water Mark indicated by: ______________________
- oil or scum line along shore objects
- fine shell or debris deposits (foreshore)
- physical markings/characteristics
- tidal gauges
- other

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain: _____________________________________________

Identify Specific Pollutants, if known:

_______________________________

(iv) Biological Characteristics. Channel supports (check all that apply):

- Riparian Corridor Characteristics: _______________________
- Wetland Fringe Characteristics: __________________________

Habitat for:

- Federally Listed Species Explain findings: __________________
- Fish/Spawn Areas Explain findings: _________________________
- Other environmentally -sensitive species Explain findings: __________________
- Aquatic/Wildlife diversity Explain: _________________________

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

- Wetland Size (ac): ____________________________
- Wetland Type, Explain: _________________________
- Wetland Quality, Explain: ________________________

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

- Wetland Flow is: ____________________________
- Surface Flow is: _____________________________

Characteristics: ____________________________

Subsurface Flow: ____________________________

Explain Findings: ____________________________

(c) Wetland Adjacency Determination with Non-TNW:

- Wetland Directly Abutting Non-TNW
- Wetland Not Directly Abutting Non-TNW

- Discrete wetland hydrologic connection Explain: ____________________________

- Ecological connection Explain: ____________________________

- Separated by berm/barrier Explain: ____________________________

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW: ____________________________

Project Wetlands: Aerial Miles from TNW: ____________________________

Flow is From: ____________________________

Estimate approximate Location of Wetland within Floodplain: ____________________________
(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).

Explain:

Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- Riparian Buffer Characteristics (type, average width):
- Vegetation type/percent cover. Explain:
- Habitat for:
  - Federally Listed Species Explain:
  - Fish/Spawn Areas Explain:
  - Other environmentally-sensitive species Explain:
  - Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downstream flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

<table>
<thead>
<tr>
<th></th>
<th>Width (ft):</th>
<th>TNW Acres</th>
</tr>
</thead>
<tbody>
<tr>
<td>TNWs</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Wetlands adjacent to TNWs:</td>
<td>Acres:</td>
<td></td>
</tr>
</tbody>
</table>

2. RPWs that flow directly or indirectly into TNWs

- Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

- Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

  Provide estimates for jurisdictional waters in the review are (check all that apply):

<table>
<thead>
<tr>
<th></th>
<th>Width (Ft).</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tributary waters</td>
<td></td>
</tr>
<tr>
<td>Other non-wetland waters:</td>
<td>Acres:</td>
</tr>
</tbody>
</table>

3. Non-RPWs that flow directly or indirectly into TNWs.

- Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

  Provide estimates of jurisdictional waters within the review area (check all that apply):

<table>
<thead>
<tr>
<th>Length (Linear Feet):</th>
<th>Width (feet):</th>
<th>Acres:</th>
</tr>
</thead>
</table>

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

- Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

  Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

  Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:

  Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

- Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

  Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
☐ Other Non-wetland Waters MBR acres:
☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☐ Non-wetland waters 201.27 linear feet (ft), 3.10 width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No navigable waters of the U.S. within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No waters of the U.S. within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):

      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area

      Non-Wetlands waters   Linear Feet   Width (ft) and/or   Acres

      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ___________________________  □ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.08843
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:
      (a) Relationship with TNW
         □ Tributary flows directly to TNW
         □ Tributary flows through 4 tributaries before entering TNW
         Project waters are 30 (or more) river miles from TNW
Project waters are river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics
Tributary is: Natural Explain:

  - Fish/Spawn Areas Explain:
  - Other environment-sensitve species Explain:
  - Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

   - [ ] TNWs Linear Feet: ______ Width (ft): ______ TNW Acres ______
   - [ ] Wetlands adjacent to TNWs: Acres: ______

2. RPWs that flow directly or indirectly into TNWs

   - [ ] Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial: ______
   - [ ] Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: ______

     Provide estimates for jurisdictional waters in the review area (check all that apply):
     - [ ] Tributary waters Linear Feet: ______ Width (ft): ______
     - [ ] Other non-wetland waters: Acres: ______

3. Non-RPWs that flow directly or indirectly into TNWs.

   - [ ] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

     Provide estimates of jurisdictional waters within the review area (check all that apply):
     Length (Linear Feet): ______ Width (feet): ______ Acres: ______

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

   - [ ] Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW: ______
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow "seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW: ______

     Provide acreage estimates for jurisdictional wetland in the review area: Acres: ______

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

   - [ ] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

     Provide acreage estimates for jurisdictional wetland in the review area: Acres: ______

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction: ________________________________

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale: ________________________________
Length (linear feet): _______ Acres: _______

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non-wetland-Waters (i.e., rivers, streams): linear feet: _______ width (ft): _______
☐ Other non-wetland Waters MBR acres: _______
☐ Wetlands MBR acres: _______

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 552.56 linear feet (ft), 56.18 width (ft)
☑ Other waters acres
☑ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

SECTION I: BACKGROUND INFORMATION
A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) 
July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER
Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION:  Drainage Feature 150

State: AZ  County/Parish/borough: Pinal  City: N/A

Center coordinates of site:  Lat. 32.8482°N  Long. -111.2599°W

Name of nearest waterbody:

Gila River between Powers Butte and Gillespie Dam

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)
☐ Office (Desk) Determination. Date: 
☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS
A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):
☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW:  

☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 0.19678
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:

   (a) Relationship with TNW

   ☐ Tributary flows directly to TNW
   ✓ Tributary flows through 4 tributaries before entering TNW
   Project waters are 30 (or more) river miles from TNW
(b) General Tributary Characteristics

Tributary is: Natural

Tributary properties with respect to top of bank (estimate):
- Average Width (ft):
- Average Depth (ft):
- Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- [ ] Silts
- [ ] Sands
- [ ] Concrete
- [ ] Muck
- [ ] Cobble
- [ ] Gravel
- [ ] Substrate - Vegetation

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain:]
- Stable.

Presence of Run/Riffle/Pool Complexes. Explain:
- Not present.

Tributary Geometry:
- Relatively Straight

Tributary Gradient (approximate average slope):
- 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow

Estimate average number of flow events in review area/year:
- 2-5

Describe Flow Regime: Ephemeral.

Other Information on Duration and Volume:

Surface Flow is:
- Discrete and Confined

Subsurface Flow:
- No

Dye (or other) test performed:

Tributary Has (Check all that apply):
- Bed and Banks
- [ ] OHWM (check all the apply): OHWM Indicators:
  - Clear, natural line impressed on the bank
  - Changes in soil character
  - Shelving
  - Vegetation matted down, bent or absent
  - Leaf litter disturbed or washed away
  - Sediment deposition
  - Water staining
  - Presence of litter and debris
  - Destruction of terrestrial vegetation
  - Presence of wrack line
  - Sediment sorting
  - Scour
  - Multiple observed or predicted flow events
  - Abrupt change in plant community

Other (list):

Discontinuous? Explain:
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

3. Characteristics of all wetlands adjacent to the tributary (if any)
All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.
Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

   - TNWs Linear Feet: Width (ft): TNW Acres
   - Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

   - Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:
   - Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

     - Provide estimates for jurisdictional waters in the review area (check all that apply):
       - Tributary waters Linear Feet: Width (Ft).
       - Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

   - Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

     - Provide estimates of jurisdictional waters within the review area (check all that apply):
       - Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

   - Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
     - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:

     - Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

   - Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

     - Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction: 

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale: 
Length (linear feet): Acres: 

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters 

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):  
☐ Other Non-wetland Waters MBR acres:  
☐ Wetlands MBR acres: 

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☐ Non-wetland waters linear feet (ft), width (ft) acres  
☐ Other waters acres  
☐ Wetlands acres

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain:  Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

   Identify TNW: ____________________________

   ☐ Vegetation

   Summarize rationale supporting determination:

2. Wetland adjacent to TNW

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 0.02262
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:

      (a) Relationship with TNW

         ☐ Tributary flows directly to TNW
         ☑ Tributary flows through 4 tributaries before entering TNW

         Project waters are 30 (or more) river miles from TNW
Project waters are Project waters are Project waters are 30 (or more) aerial (straight) miles from tributary to RPW:

Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural

Tributary properties with respect to top of bank (estimate):
- Average Width (ft):
- Average Depth (ft):
- Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- Silts
- Sands
- Concrete
- Muck
- Cobble
- Gravel
- Substrate - Vegetation

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain:]
Stable.

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

Tributary Geometry: Relatively Straight

Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow

Estimate average number of flow events in review area/year: 2-5

Describe Flow Regime: Ephemeral.

Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined Characteristics:

Subsurface Flow: No Explain:

Dye (or other) test performed:

Tributary Has (Check all that apply):

Bed and Banks

OHWM (check all the apply): OHWM Indicators:
- Clear, natural line impressed on the bank
- Changes in soil character
- Shelving
- Vegetation matted down, bent or absent
- Leaf litter disturbed or washed away
- Sediment deposition
- Water staining

Other (list): Presence of litter and debris

Discontinuous? Explain:
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):
- High tide line indicated by: __________
- oil or scum line along shore objects __________
- fine shell or debris deposits (foreshore) __________
- physical markings/characteristics __________
- tidal gauges __________
- other __________
- Mean High water Mark indicated by: __________
- survey to available datum __________
- physical markings __________
- vegetation lines/changes in vegetation types __________

(iii) Chemical Characteristics:

- Fish/Spawn Areas Explain findings: __________
- Other environmentally -sensitive species Explain findings: __________
- Aquatic/Wildlife diversity Explain: __________

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:
(a) General Wetland Characteristics
Properties:
- Wetland Size (ac): __________
- Wetland Type, Explain: __________
- Wetland Quality, Explain: __________
Project Wetlands Cross or Serve as State Boundaries, Explain: __________
(b) General Flow Relationship with Non-TNW:
- Wetland Flow is: __________ Explain: __________
- Surface Flow is: __________
- Characteristics: __________
- Subsurface Flow: __________ Explain Findings: __________
(c) Wetland Adjacency Determination with Non-TNW:
- Wetland Directly Abutting Non-TNW
- Wetland Not Directly Abutting Non-TNW
- Discrete wetland hydrologic connection Explain: __________
- Ecological connection Explain: __________
- Separated by berm/barrier Explain: __________
(d) Proximity (Relationship) to TNW
Project Wetlands: River Miles from TNW: __________
Project Wetlands: Aerial Miles from TNW: __________
Flow is From: __________
Estimate approximate Location of Wetland within Floodplain: __________
(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).

Explain

Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- Riparian Buffer  Characteristics (type, average width):
- Vegetation  type/percent cover. Explain:

Habitat for:
- Federally Listed Species  Explain:
- Fish/Spawn Areas  Explain:
- Other environmentally-sensitive species  Explain:
- Aquatic/Wildlife Diversity  Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:
   - TNWs   Linear Feet: Width (ft): TNW Acres
   - Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs
   - Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:
   - Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
     - Provide estimates for jurisdictional waters in the review area (check all that apply):
       - Tributary waters Linear Feet: Width (Ft).
       - Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.
   - Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.
   - Provide estimates of jurisdictional waters within the review area (check all that apply):
     - Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.
   - Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
     - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:
     - Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW
   - Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
     - Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres): 

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section III C2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
- Other Non-wetland Waters MBR acres:
- Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- Non-wetland waters linear feet (ft), width (ft)
- Other waters acres
- Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Name of nearest waterbody: 

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:  
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

**SECTION II: SUMMARY OF FINDINGS**

**A. RHA SECTION 10 DETERMINATION OF JURISDICTION**

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

**B. CWA SECTION 404 DETERMINATION OF JURISDICTION**

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      - [ ] TNWs (new)
      - [ ] Wetlands adjacent to TNWs
      - [ ] Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      - [ ] Non-RPWs that flow directly or indirectly into TNWs
      - [ ] Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      - [ ] Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      - [ ] Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      - [ ] Impoundments of jurisdictional waters
      - [ ] Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area
      - Non-Wetlands waters __________ Linear Feet __________ Width (ft) and/or __________ Acres
      - Wetlands Acres: __________

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
   - [ ] Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
     Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. **TNW**
   - Identify TNW: ______________________
   - ☐ Vegetation

   Summarize rationale supporting determination:

2. **Wetland adjacent to TNW**

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:
   - Watershed Size (sq mi): 49650
   - Drainage Area (sq mi): 54.34713
   - Average Annual Rainfall (in): 10
   - Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:
   - ☐ Tributary flows directly to TNW
   - ☑ Tributary flows through 4 tributaries before entering TNW
   - Project waters are 30 (or more) river miles from TNW
**APPROVED JURISDICTIONAL DETERMINATION FORM**

3. Characteristics of all wetlands adjacent to the tributary (if any)

- All wetland(s) being considered in cumulative analysis: [ ]
- Wetland acres in total being considered in cumulative analysis: [ ]

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all of its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage...
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: __________ Width (ft): __________ TNW Acres __________

☐ Wetlands adjacent to TNWs: Acres: __________

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review area (check all that apply):

☐ Tributary waters Linear Feet: __________ Width (Ft): __________

☐ Other non-wetland waters: Acres: __________

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): __________ Width (feet): __________ Acres: __________

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres: __________

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres: __________

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres): 

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction: 

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale: 

Length (linear feet): 

Acres: 

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters: 

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft): 
- Other Non-wetland Waters MBR acres: 
- Wetlands MBR acres: 

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- Non-wetland waters linear feet (ft), width (ft) 
- Other waters acres 
- Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:
SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  

July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  

Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 153  

State: AZ  
County/Parish/borough: Pinal  
City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:

Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)  

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):

      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area

      Non-Wetlands waters Linear Feet Width (ft) and/or Acres

      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ___________________________ □ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:
   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 0.00096
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:
   (a) Relationship with TNW
   □ Tributary flows directly to TNW
   ✔ Tributary flows through _______ tributaries before entering TNW
   Project waters are _______ river miles from TNW
Project waters are river Miles from tributary to RPW:  
Project waters are aerial (straight) miles from tributary to TNW:  
Project waters are aerial (straight) miles from tributary to RPW:  

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural  

Tributary properties with respect to top of bank (estimate):  
Average Width (ft):  
Average Depth (ft):  
Average Side Slopes: 3:1  

Primary tributary substrate composition (check all that apply):  
- Silts  
- Sands  
- Concrete  
- Muck  
- Cobbles  
- Gravel  
- Substrate - Vegetation  

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain]: Stable.  

Presence of Run/Riffle/Pool Complexes. Explain: Not present.  

Tributary Geometry: Relatively Straight  

Tributary Gradient (approximate average slope): 1%

(c) Flow

Tributary Provides for: Ephemeral Flow  

Describe Flow Regime: Ephemeral.  

Other Information on Duration and Volume:  

Surface Flow is: Discrete and Confined  
Characteristics:  

Subsurface Flow: No  
Explain:  

Dye (or other) test performed:  

Tributary Has (Check all that apply):  
- Bed and Banks  
- OHWM (check all the apply): OHWM Indicators:  
  - Clear, natural line impressed on the bank  
  - Changes in soil character  
  - Shelving  
  - Vegetation matted down, bent or absent  
  - Leaf litter disturbed or washed away  
  - Sediment deposition  
  - Water staining  

Other (list):  

Discontinuous? Explain:  

Other (list):
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

- High tide line indicated by: [ ]
- Oil or scum line along shore objects [ ]
- Fine shell or debris deposits (foreshore) [ ]
- Physical markings/characteristics [ ]

- Other environmentally-sensitive species Explain findings: [ ]
- Aquatic/Wildlife diversity Explain: [ ]

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac): [ ]
Wetland Type, Explain: [ ]
Wetland Quality, Explain: [ ]

Project Wetlands Cross or Serve as State Boundaries, Explain: [ ]

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: [ ]

Surface Flow is: [ ]

Characteristics: [ ]

Subsurface Flow: [ ]

Explain Findings: [ ]

(c) Wetland Adjacency Determination with Non-TNW:

- Wetland Directly Abutting Non-TNW [ ]
- Wetland Not Directly Abutting Non-TNW [ ]

- Discrete wetland hydrologic connection Explain: [ ]
- Ecological connection Explain: [ ]
- Separated by berm/barrier Explain: [ ]

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW: [ ]
Project Wetlands: Aerial Miles from TNW: [ ]

Flow is From: [ ]

Estimate approximate Location of Wetland within Floodplain: [ ]
(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).

Explain

Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- Riparian Buffer Characteristics (type, average width): 
- Vegetation type/percent cover. Explain:

Habitat for:

- Federally Listed Species Explain:
- Fish/Spawn Areas Explain:
- Other environmentally-sensitive species Explain:
- Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage...
2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

|☐| TNWs | Linear Feet: | Width (ft): | TNW Acres |
|☐| Wetlands adjacent to TNWs: | Acres: |

2. RPWs that flow directly or indirectly into TNWs

|☐| Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial: |
|☐| Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: |

Provide estimates for jurisdictional waters in the review area (check all that apply):

|☐| Tributary waters | Linear Feet: | Width (Ft): |
|☐| Other non-wetland waters: | Acres: |

3. Non-RPWs that flow directly or indirectly into TNWs.

|☐| Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.C. Provide estimates of jurisdictional waters within the review area (check all that apply):

| Length (Linear Feet): | Width (feet): | Acres: |

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

|☐| Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands. |

|☐| Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW: |

|☐| Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW: |

Provide acreage estimates for jurisdictional wetland in the review area: | Acres: |

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

|☐| Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C. Provide acreage estimates for jurisdictional wetland in the review area: | Acres: |

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction: 

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale: 

Length (linear feet): Acres: 

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters 

Explain finding of no Significant Nexus: See Section III.C.2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- [ ] Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
- [ ] Other Non-wetland Waters MBR acres:
- [ ] Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- [✓] Non-wetland waters linear feet (ft), width (ft)
- [ ] Other waters acres
- [ ] Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.
- Waters subject to the ebb and flow of the tide.
- Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      - TNWs (new)
      - Wetlands adjacent to TNWs
      - Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      - Non-RPWs that flow directly or indirectly into TNWs
      - Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      - Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      - Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      - Impoundments of jurisdictional waters
      - Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area
      - Non-Wetlands waters Linear Feet Width (ft) and/or Acres
      - Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
   - Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
   - Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW:  

☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

<table>
<thead>
<tr>

3. Characteristics of all wetlands adjacent to the tributary (if any)
All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION
A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.
Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:
This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage...
2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

---

### D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. **TNWs and Adjacent Wetlands.** Check all that apply and provide size estimates in review area:
   - □ TNWs
   - □ Width (ft): 
   - □ TNW Acres
   - □ Wetlands adjacent to TNWs: Acres:

2. **RPWs that flow directly or indirectly into TNWs**
   - □ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:
   - □ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
     - Provide estimates for jurisdictional waters in the review area (check all that apply):
       - □ Tributary waters Linear Feet: Width (Ft).
       - □ Other non-wetland waters: Acres:

3. **Non-RPWs that flow directly or indirectly into TNWs.**
   - □ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.
   - Provide estimates of jurisdictional waters within the review area (check all that apply):
     - Length (Linear Feet): Width (feet): Acres:

4. **Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.**
   - □ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - □ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
     - □ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:
       - Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. **Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW**
   - □ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
     - Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. **Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.**
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
- Other Non-wetland Waters MBR acres:
- Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- Non-wetland waters linear feet (ft), width (ft) acres
- Other waters acres
- Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

Additional Comments to Support JD:
This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION
A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  
July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  
Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 155
State: AZ  
County/Parish/borough: Pinal County  
City: N/A
Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W
Name of nearest waterbody: Gila River between Powers Butte and Gillespie Dam
Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: 
Name of watershed or Hydrologic Unit Code (HUC): 15050100

☐ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)
☐ Office (Desk) Determination. Date:
✓ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS
A. RHA SECTION 10 DETERMINATION OF JURISDICTION
There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.
☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION
There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters Linear Feet Width (ft) and/or Acres
      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
✓ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   
   Identify TNW: [Blank]  
   ☐ Vegetation

   Summarize rationale supporting determination:

2. Wetland adjacent to TNW

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 0.04265
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:

   (a) Relationship with TNW

   □ Tributary flows directly to TNW
   ☑ Tributary flows through 4 tributaries before entering TNW

   Project waters are 30 (or more) river miles from TNW
(b) General Tributary Characteristics

Tributary is: Natural

Tributary properties with respect to top of bank (estimate):
- Average Width (ft):
- Average Depth (ft):
- Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- Silts
- Sands
- Concrete
- Muck
- Cobble
- Gravel
- Substrate - Vegetation

Tributary Condition/Stability [e.g., highly eroding, sloughing banks]. Explain: Stable.

Presence of Run/Riffle/Poold Complexes. Explain: Not present.

Tributary Geometry: Relatively Straight

Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow

Describe Flow Regime: Ephemeral.

Surface Flow is: Discrete and Confined

Subsurface Flow: No

Dye (or other) test performed: No

Tributary Has (Check all that apply):
- Bed and Banks
- OHWM (check all the apply): OHWM Indicators:
  - Clear, natural line impressed on the bank
  - Changes in soil character
  - Shelving
  - Vegetation matted down, bent or absent
  - Leaf litter disturbed or washed away
  - Sediment deposition
  - Water staining
- Presence of litter and debris
- Destruction of terrestrial vegetation
- Presence of wrack line
- Sediment sorting
- Scour
- Multiple observed or predicted flow events
- Abrupt change in plant community

Other (list):
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):
- High tide line indicated by:
- Mean High water Mark indicated by:
- Oil or scum line along shore objects
- Fine shell or debris deposits (foreshore)
- Physical markings/characteristics
- Tidal gauges
- Other

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain: 

Identify Specific Pollutants, if known: 

(iv) Biological Characteristics. Channel supports (check all that apply):

- Riparian Corridor Characteristics: 
- Wetland Fringe Characteristics: 

Habitat for:
- Federally Listed Species Explain findings: 
- Fish/Spawn Areas Explain findings: 
- Other environmentally sensitive species Explain findings: 
- Aquatic/Wildlife diversity Explain: 

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:
- Wetland Size (ac): 
- Wetland Type, Explain: 
- Wetland Quality, Explain: 

Project Wetlands Cross or Serve as State Boundaries, Explain: 

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: Explain: 

Surface Flow is: 

Characteristics: 

Subsurface Flow: Explain Findings: 

(c) Wetland Adjacency Determination with Non-TNW:

- Wetland Directly Abutting Non-TNW 
- Wetland Not Directly Abutting Non-TNW 
  - Discrete wetland hydrologic connection Explain: 
  - Ecological connection Explain: 
  - Separated by berm/barrier Explain: 

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW: 
Project Wetlands: Aerial Miles from TNW: 
Flow is From: 
Estimate approximate Location of Wetland within Floodplain: 

Hi: tide line indicated by:
Mean: High water Mark indicated by:
Physical: markings
Vegetation: lines/changes in vegetation types
(ii) Chemical Characteristics:
Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain 
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):
- [ ] Riparian Buffer Characteristics (type, average width):
- [ ] Vegetation type/percent cover. Explain: 
Habitat for:
- [ ] Federally Listed Species Explain: 
- [ ] Fish/Spawn Areas Explain: 
- [ ] Other environmentally-sensitive species Explain: 
- [ ] Aquatic/Wildlife Diversity Explain: 

3. Characteristics of all wetlands adjacent to the tributary (if any)
All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical, and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.
Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:
   - TNWs
   - Wetlands adjacent to TNWs:

2. RPWs that flow directly or indirectly into TNWs
   - Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:
   - Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
     - Provide estimates for jurisdictional waters in the review area (check all that apply):
       - Tributary waters
       - Other non-wetland waters:

3. Non-RPWs that flow directly or indirectly into TNWs.
   - Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.C.

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.
   - Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
     - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW
   - Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Feature ID: 155

Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
☐ Other Non-wetland Waters MBR acres:
☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters linear feet (ft), width (ft):
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

☐ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There are No “navigable waters of the U.S.” within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters Linear Feet Width (ft) and/or Acres
      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
   ☐ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ___________________________ ☐ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.00747
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0
   (ii) Physical Characteristics:
      (a) Relationship with TNW
         ☐ Tributary flows directly to TNW
         ☑ Tributary flows through 4 tributaries before entering TNW
         Project waters are 30 (or more) river miles from TNW
Project waters are river Miles from tributary to RPW: 
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW: 
Project waters are aerial (straight) miles from tributary to RPW: 
Project waters cross or serve as state boundaries. Explain: 
Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: 

Tributary properties with respect to top of bank (estimate):
  Average Width (ft): 
  Average Depth (ft): 
  Average Side Slopes: 3:1 

Primary tributary substrate composition (check all that apply):
  ✔ Silts  □ Sands  □ Concrete  □ Muck  
  □ Cobble  □ Gravel  □ Substrat - Vegetation  Other, Explain: 

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.]
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.

☐ Other environmentally-sensitive species Explain:

☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

- TNWs  Linear Feet: __________ Width (ft): __________ TNW Acres __________
- Wetlands adjacent to TNWs: Acres: __________

2. RPWs that flow directly or indirectly into TNWs

- Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial: __________
- Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: __________
  Provide estimates for jurisdictional waters in the review area (check all that apply):
  - Tributary waters Linear Feet: __________ Width (Ft): __________
  - Other non-wetland waters: Acres: __________

3. Non-RPWs that flow directly or indirectly into TNWs.

- Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

  Provide estimates of jurisdictional waters within the review area (check all that apply):
  Length (Linear Feet): __________ Width (feet): __________ Acres: __________

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

- Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
  - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW: __________
  - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW: __________

  Provide acreage estimates for jurisdictional wetland in the review area: Acres: __________

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

- Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

  Provide acreage estimates for jurisdictional wetland in the review area: Acres: __________

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
156

Feature ID: APPROVED JURISDICTIONAL DETERMINATION FORM

U.S Army Corps of Engineers

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section III.C.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

2. Non-Regulated Waters/Wetlands (check if applicable):

   ✔ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

      Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ____________________________ □ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offshore. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:
   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 52.66796
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0

(ii) Physical Characteristics:

   (a) Relationship with TNW
      □ Tributary flows directly to TNW
      ✔ Tributary flows through 4 tributaries before entering TNW
      Project waters are 30 (or more) river miles from TNW
Project waters are 30 or more  (or more) aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: 

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: The above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:
   - [ ] TNWs Linear Feet: __________ Width (ft): __________ TNW Acres __________
   - [ ] Wetlands adjacent to TNWs: Acres: __________

2. RPWs that flow directly or indirectly into TNWs
   - [ ] Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:
   - [ ] Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
     - Provide estimates for jurisdictional waters in the review area (check all that apply):
       - [ ] Tributary waters Linear Feet: __________ Width (ft): __________
       - [ ] Other non-wetland waters: Acres: __________

3. Non-RPWs that flow directly or indirectly into TNWs.
   - [ ] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.
   - Provide estimates of jurisdictional waters within the review area (check all that apply):
     - Length (Linear Feet): __________ Width (feet): __________ Acres: __________

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.
   - [ ] Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:
     - Provide acreage estimates for jurisdictional wetland in the review area: Acres: __________

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW
   - [ ] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
   - Provide acreage estimates for jurisdictional wetland in the review area: Acres: __________

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): _______ Acres: _______

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non-wetland-Waters (i.e., rivers, streams): _______ linear feet: _______ width (ft): _______

☐ Other Non-wetland Waters MBR _______ acres: _______

☐ Wetlands MBR _______ acres: _______

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 2840.59 linear feet (ft), 22.39 width (ft)

☐ Other waters _______ acres

☐ Wetlands _______ acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

☐ Office Concurs with data sheets/delineation report

☐ Office Does Not Concur with data sheets/delineation report

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  

July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  

Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION:  

Drainage Feature 158

State: AZ  
County/Parish/borough: Pinal County  
City: N/A

Center coordinates of site:  
Lat. 32.8482°N  
Long. -111.2599°W

Name of nearest waterbody: Gila River between Powers Butte and Gillespie Dam

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:  

Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☐ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)  

☐ Office (Desk) Determination. Date:  
☐ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTON

There  Are  No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTON

There  Are  No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):  
   ☐ TNWs (new)  
   ☐ Wetlands adjacent to TNWs  
   ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs  
   ☐ Non-RPWs that flow directly or indirectly into TNWs  
   ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs  
   ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs  
   ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs  
   ☐ Impoundments of jurisdictional waters  
   ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area  
   Non-Wetlands waters  Linear Feet  Width (ft) and/or  Acres
   Wetlands Acres: 

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):  
   ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:  
   Explain: drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

   Identify TNW: ________________________

   ☐ Vegetation

   Summarize rationale supporting determination:

2. Wetland adjacent to TNW

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 0.02448
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:

   (a) Relationship with TNW

   ☐ Tributary flows directly to TNW
   ☑ Tributary flows through 4 tributaries before entering TNW

   Project waters are 30 (or more) river miles from TNW
**Feature ID:** 158

**U.S Army Corps of Engineers**

**Project waters are** [ ] river Miles from tributary to RPW:

**Project waters are** 30 (or more) [ ] aerial (straight) miles from tributary to TNW:

**Project waters are** [ ] aerial (straight) miles from tributary to RPW:

**Project waters cross or serve as state boundaries. Explain:**

**Identify flow route to TNW** Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

### (b) General Tributary Characteristics

**Tributary is:** Natural [ ] Explain:

**Tributary properties with respect to top of bank (estimate):**
- **Average Width (ft):**
- **Average Depth (ft):**
- **Average Side Slopes:** 3:1

**Primary tributary substrate composition (check all that apply):**
- [ ] Silts
- [ ] Sands
- [ ] Concrete
- [ ] Muck
- [ ] Cobble
- [ ] Gravel
- [ ] Substrate - Vegetation
- Other, Explain: [ ]

**Tributary Condition/Stability** [e.g., highly eroding, sloughing banks. Explain:]

| Stable. |

**Presence of Run/Riffle/Pool Complexes. Explain:**

| Not present. |

**Tributary Geometry:** Relatively Straight [ ]

**Tributary Gradient (approximate average slope):** 1%

### (c) Flow:

**Tributary Provides for:** Ephemeral Flow [ ]

**Estimate average number of flow events in review area/year:** 2-5

**Describe Flow Regime:** Ephemeral.

**Other Information on Duration and Volume:**

**Surface Flow is:** Discrete and Confined [ ]

**Subsurface Flow:** No [ ]

**Dye (or other) test performed:** [ ]

**Tributary Has (Check all that apply):**

- [ ] Bed and Banks
- [ ] OHWM (check all the apply): OHWM Indicators:
  - [ ] Clear, natural line impressed on the bank
  - [ ] Changes in soil character
  - [ ] Shelving
  - [ ] Vegetation matted down, bent or absent
  - [ ] Leaf litter disturbed or washed away
  - [ ] Sediment deposition
  - [ ] Water staining
  - Other (list):

- [ ] Presence of litter and debris
- [ ] Destruction of terrestrial vegetation
- [ ] Presence of wrack line
- [ ] Sediment sorting
- [ ] Scour
- [ ] Multiple observed or predicted flow events
- [ ] Abrupt change in plant community

**Other (list):** [ ]

**Discontinuous?** Explain: [ ]
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

- [ ] High tide line indicated by:
  - [ ] oil or scum line along shore objects
  - [ ] fine shell or debris deposits (foreshore)
  - [ ] physical markings/characteristics
  - [ ] tidal gauges
  - [ ] other
- [ ] Mean High water Mark indicated by:
  - [ ] survey to available datum
  - [ ] physical markings
  - [ ] vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc): Explain: 
Identify Specific Pollutants, if known: 

(iv) Biological Characteristics. Channel supports (check all that apply):

- [ ] Riparian Corridor Characteristics: 
- [ ] Wetland Fringe Characteristics: 
Habitat for:
  - [ ] Federally Listed Species Explain findings: 
  - [ ] Fish/Spawn Areas Explain findings: 
  - [ ] Other environmentally sensitive species Explain findings: 
  - [ ] Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics
Properties:
  - Wetland Size (ac): 
  - Wetland Type, Explain: 
  - Wetland Quality, Explain: 
Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:
Wetland Flow is: Explain: 
Surface Flow is:
Characteristics:
Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:
- [ ] Wetland Directly Abutting Non-TNW
- [ ] Wetland Not Directly Abutting Non-TNW
  - [ ] Discrete wetland hydrologic connection Explain: 
  - [ ] Ecological connection Explain: 
  - [ ] Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW
Project Wetlands: River Miles from TNW: 
Project Wetlands: Aerial Miles from TNW: 
Flow is From:
Estimate approximate Location of Wetland within Floodplain:
(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).

Explain

Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- Riparian Buffer  Characteristics (type, average width):
- Vegetation  type/percent cover. Explain:
- Habitat for:
  - Federally Listed Species  Explain:
  - Fish/Spawn Areas  Explain:
  - Other environmentally-sensitive species  Explain:
  - Aquatic/Wildlife Diversity  Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): 
Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: 
width (ft): 
☐ Other Non-wetland Waters MBR acres: 
☐ Wetlands MBR acres: 

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☐ Non-wetland waters 835.14 linear feet (ft), 4.42 width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☐ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☐ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

☐ Office Concurs with data sheets/delineation report

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated ( interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters ___ Linear Feet ______ Width (ft) and/or ______ Acres
      Wetlands Acres: ______

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
   ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. **TNW**
   - Identify TNW: 
   - □ Vegetation
   - Summarize rationale supporting determination:

2. **Wetland adjacent to TNW**
   - Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) **General Area Conditions:**
   - Watershed Size (sq mi): 49650
   - Drainage Area (sq mi): 0.01472
   - Average Annual Rainfall (in): 10
   - Average Annual Snowfall (in): 0

   (ii) **Physical Characteristics:**
   - □ Tributary flows directly to TNW
   - [ ] Tributary flows through 4 tributaries before entering TNW
   - Project waters are 30 (or more) river miles from TNW
Project waters are river miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft):
Average Depth (ft):
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- [ ] Silts
- [ ] Sands
- [X] Concrete
- [ ] Muck
- [ ] Cobble
- [ ] Gravel
- [ ] Substrate - Vegetation
- Other, Explain:

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain:]
- Stable.

Presence of Run/Riffle/Pool Complexes. Explain:
- Not present.

Tributary Geometry:
- Relatively Straight
- Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for:
- Ephemeral Flow

Estimate average number of flow events in review area/year: 2-5

Describe Flow Regime:
- Ephemeral.

Other Information on Duration and Volume:

Surface Flow is:
- Discrete and Confined

Subsurface Flow:
- No
- Explain:

Dye (or other) test performed:

Tributary Has (Check all that apply):
- Bed and Banks
- [X] OHWM (check all the apply): OHWM Indicators:
  - Clear, natural line impressed on the bank
  - Changes in soil character
  - Shelving
  - Vegetation matted down, bent or absent
  - Leaf litter disturbed or washed away
  - Sediment deposition
  - Water staining
- Presence of litter and debris
- Destruction of terrestrial vegetation
- Presence of wrack line
- Sediment sorting
- Scour
- Multiple observed or predicted flow events
- Abrupt change in plant community

Other (list):

Discontinuous? Explain:
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

- High tide line indicated by: ___________________________
- Oil or scum line along shore objects
- Fine shell or debris deposits (foreshore)
- Physical markings/characteristics
- Tidal gauges
- Other

□ Mean High water Mark indicated by: ___________________________
- Survey to available datum
- Physical markings
- Vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

[ ] Explain: ___________________________

Identify Specific Pollutants, if known: ___________________________

(iv) Biological Characteristics. Channel supports (check all that apply):

[ ] Riparian Corridor Characteristics: ___________________________

[ ] Wetland Fringe Characteristics: ___________________________

Habitat for:

[ ] Federally Listed Species Explain findings: ___________________________

[ ] Fish/Spawn Areas Explain findings: ___________________________

[ ] Other environmentally-sensitive species Explain findings: ___________________________

[ ] Aquatic/Wildlife diversity Explain: ___________________________

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac): ___________________________

Wetland Type, Explain: ___________________________

Wetland Quality, Explain: ___________________________

Project Wetlands Cross or Serve as State Boundaries, Explain: ___________________________

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: ___________________________

[ ] Explain: ___________________________

Surface Flow is: ___________________________

Characteristics: ___________________________

Subsurface Flow: ___________________________

Explain Findings: ___________________________

(c) Wetland Adjacency Determination with Non-TNW:

- Wetland Directly Abutting Non-TNW
- Wetland Not Directly Abutting Non-TNW

[ ] Discrete wetland hydrologic connection Explain: ___________________________

[ ] Ecological connection Explain: ___________________________

[ ] Separated by berm/barrier Explain: ___________________________

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW: ___________________________

Project Wetlands: Aerial Miles from TNW: ___________________________

Flow is From: ___________________________

Estimate approximate Location of Wetland within Floodplain: ___________________________
(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).

Explain

Identify specific pollutants, if known:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- [ ] Riparian Buffer  Characteristics (type, average width):
- [ ] Vegetation  type/percent cover. Explain:

Habitat for:
- [ ] Federally Listed Species  Explain:
- [ ] Fish/Spawn Areas  Explain:
- [ ] Other environmentally-sensitive species  Explain:
- [ ] Aquatic/Wildlife Diversity  Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

   Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:
   - [ ] TNWs Linear Feet: Width (ft): TNW Acres
   - [ ] Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs
   - [ ] Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:
   - [ ] Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
     - Provide estimates for jurisdictional waters in the review area (check all that apply):
       - [ ] Tributary waters Linear Feet: Width (ft).
       - [ ] Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.
   - [ ] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.C.
     - Provide estimates of jurisdictional waters within the review area (check all that apply):
       - Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.
   - [ ] Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:
       - Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW
   - [ ] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
     - Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
Other Non-wetland Waters MBR acres:
Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

Non-wetland waters linear feet (ft), width (ft)
Other waters acres
Wetlands acres

EXPLANATION OF FINDING OF NO SIGNIFICANT NEXUS:

See Section IIIC2.

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
   ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. **TNW**
   - Identify TNW: 
   - Summarize rationale supporting determination:

2. **Wetland adjacent to TNW**
   - Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) **General Area Conditions:**
   - Watershed Size (sq mi): 49650
   - Drainage Area (sq mi): 0.01361
   - Average Annual Rainfall (in): 10
   - Average Annual Snowfall (in): 0

   (ii) **Physical Characteristics:**
   - **(a) Relationship with TNW**
     - Tributary flows directly to TNW
     - Tributary flows through 4 tributaries before entering TNW
     - Project waters are 30 (or more) river miles from TNW
Project waters are river Miles from tributary to RPW: 
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW: 
Project waters are aerial (straight) miles from tributary to RPW: 
Project waters cross or serve as state boundaries. Explain: 
Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: 

Tributary properties with respect to top of bank (estimate):
Average Width (ft): 
Average Depth (ft): 
Average Side Slopes: 3:1 
Primary tributary substrate composition (check all that apply):
- Silts
- Sands
- Concrete
- Muck
- Cobble
- Gravel
- Substrate - Vegetation
Other, Explain: 
Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.]
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight 
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow 
Estimate average number of flow events in review area/year: 2-5 
Describe Flow Regime: Ephemeral.

- Explain: 
- Surface Flow is: 

Characteristics: 

Subsurface Flow: Explain Findings: 

#### (c) Wetland Adjacency Determination with Non-TNW:

- Wetland Directly Abutting Non-TNW 
- Wetland Not Directly Abutting Non-TNW
  - Discrete wetland hydrologic connection Explain: 
  - Ecological connection Explain: 
  - Separated by berm/barrier Explain: 

#### (d) Proximity (Relationship) to TNW

- Project Wetlands: River Miles from TNW: 
- Project Wetlands: Aerial Miles from TNW: 
- Flow is From: 
- Estimate approximate Location of Wetland within Floodplain: 

---

**Explanations**

- High tide line: Indicated by natural or artificial high tide features.
- Mean High water Mark: Indicated by survey to available datum or physical markings.
- Chemical Characteristics: Describe the chemical properties of the water, such as color, clarity, and film formation.
- Biological Characteristics: Describe the characteristics of the riparian corridor and wetland fringe.
- Habitat: Identify the presence of Federally Listed Species, Fish/Spawn Areas, and Other environmentally-sensitive species.
- Physical Characteristics: Provide details on wetland size, type, and quality.
- Flow Relationship: Describe the flow into and out of the wetland.
- Adjacency Determination: Identify if the wetland is directly or not directly abutting the non-TNW.
- Proximity to TNW: Measure the distance from the wetland to the TNW.
(ii) Chemical Characteristics:
Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

☐ Riparian Buffer Characteristics (type, average width):
☐ Vegetation type/percent cover. Explain:
Habitat for:
☐ Federally Listed Species Explain:
☐ Fish/Spawn Areas Explain:
☐ Other environmentally-sensitive species Explain:
☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)
All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION
A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.
Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downstream flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage...
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

- [ ] TNWs
- Width (ft): 
- TNW Acres
- [ ] Wetlands adjacent to TNWs
- Acres:

2. RPWs that flow directly or indirectly into TNWs

- [ ] Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

- [ ] Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

  Provide estimates for jurisdictional waters in the review area (check all that apply):
  - [ ] Tributary waters
  - [ ] Other non-wetland waters

3. Non-RPWs that flow directly or indirectly into TNWs.

- [ ] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

  Provide estimates of jurisdictional waters within the review area (check all that apply):
  - Length (Linear Feet):
  - Width (feet):
  - Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

- [ ] Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
  - [ ] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

  - [ ] Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:

  Provide acreage estimates for jurisdictional wetland in the review area:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

- [ ] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

  Provide acreage estimates for jurisdictional wetland in the review area:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet):  
Acres:  

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters  

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- Non wetland-Waters (i.e., rivers, streams):  linear feet:  width (ft):  
- Other Non-wetland Waters MBR  acres:  
- Wetlands MBR  acres:  

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- Non-wetland waters  linear feet (ft),  width (ft)  
- Other waters  acres  
- Wetlands  acres  

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  
   July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  
   Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 160
   State: AZ  
   County/Parish/borough: Pinal County  
   City: N/A
   Center coordinates of site: Lat. 32.8482°N  
   Long. -111.2599°W
   Name of nearest waterbody:
   Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
   Gila River between Powers Butte and Gillespie Dam
   Name of watershed or Hydrologic Unit Code (HUC): 15050100
   ☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
   ☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)
   ☐ Office (Desk) Determination. Date:
   ☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION
   There  Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.
   ☐ Waters subject to the ebb and flow of the tide.
   ☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION
   There  Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters Linear Feet Width (ft) and/or Acres
      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
   ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ____________________________  □ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

<table>
<thead>
<tr>
<th>Characteristics</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Watershed Size (sq mi)</td>

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

<table>
<thead>
<tr>
<th>Tributary is: Natural</th>
<th>Explain:</th>
</tr>
</thead>
</table>

Tributary properties with respect to top of bank (estimate):

- Average Width (ft):
- Average Depth (ft):
- Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

- ✔ Silts
- ☐ Sands
- ☐ Concrete
- ☐ Muck
- ☐ Gravel
- ☑ Substrate - Vegetation
- Other, Explain: |

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

Tributary Geometry: Relatively Straight

Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow

Estimate average number of flow events in review area/year: 2-5

Describe Flow Regime: Ephemeral.

Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined

Subsurface Flow: No

☐ Dye (or other) test performed:

Tributary Has (Check all that apply):

- ☐ Bed and Banks
- ✔ OHWM (check all the apply): OHWM Indicators:
  - ☑ Clear, natural line impressed on the bank
  - ☑ Changes in soil character
  - ☑ Shelving
  - ☑ Vegetation matted down, bent or absent
  - ☑ Leaf litter disturbed or washed away
  - ☑ Sediment deposition
  - ☑ Water staining
  - Other (list): |
  - ☐ Discontinuous? Explain: |
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

- High tide line indicated by: ___________________________  
- Mean High water Mark indicated by: ___________________________  
- oil or scum line along shore objects  
- fine shell or debris deposits (foreshore)  
- physical markings/characteristics  
- tidal gauges  
- other

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):  
Explain: ____________________________________________________________

Identify Specific Pollutants, if known: ____________________________________

(iv) Biological Characteristics. Channel supports (check all that apply):

- Riparian Corridor Characteristics: ____________________________________
- Wetland Fringe Characteristics: ______________________________________

Habitat for:
- Federally Listed Species Explain findings: ________________________________
- Fish/Spawn Areas Explain findings: ______________________________________
- Other environmentally-sensitive species Explain findings: ___________________
- Aquatic/Wildlife diversity Explain: ______________________________________

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:
- Wetland Size (ac): ___________________________  
- Wetland Type, Explain: ___________________________  
- Wetland Quality, Explain: ___________________________

Project Wetlands Cross or Serve as State Boundaries, Explain: ____________

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: ___________________________ Explain: ___________________________

Surface Flow is: ___________________________  

Characteristics: ___________________________  

Subsurface Flow: ___________________________ Explain Findings: ___________________________

(c) Wetland Adjacency Determination with Non-TNW:

- Wetland Directly Abutting Non-TNW
- Wetland Not Directly Abutting Non-TNW
- Discrete wetland hydrologic connection Explain: ___________________________
- Ecological connection Explain: ___________________________
- Separated by berm/barrier Explain: ___________________________

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW: ___________________________

Project Wetlands: Aerial Miles from TNW: ___________________________

Flow is From: ___________________________

Estimate approximate Location of Wetland within Floodplain: ____________
(ii) Chemical Characteristics:
Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: etc.).

Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):
- Riparian Buffer  Characteristics (type, average width):
- Vegetation  type/percent cover. Explain:

Habitat for:
- Federally Listed Species  Explain:
- Fish/Spawn Areas  Explain:
- Other environmentally-sensitive species  Explain:
- Aquatic/Wildlife Diversity  Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage...
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

### D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

#### 1. TNWs and Adjacent Wetlands.
Check all that apply and provide size estimates in review area:

- [ ] TNWs  Linear Feet:  Width (ft):  TNW Acres
- [ ] Wetlands adjacent to TNWs:  Acres:

#### 2. RPWs that flow directly or indirectly into TNWs

- [ ] Tributaries of TNWs where tributaries typically flow year-round are jurisprudential. Provide data and Rationale indicating that tributary is perennial:
- [ ] Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisprudential. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
  - Provide estimates for jurisprudential waters in the review area (check all that apply):
    - [ ] Tributary waters  Linear Feet:  Width (ft).
    - [ ] Other non-wetland waters:  Acres:

#### 3. Non-RPWs that flow directly or indirectly into TNWs.

- [ ] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisprudential. Data supporting this conclusion provided at section III.C.
  - Provide estimates of jurisprudential waters within the review area (check all that apply):
    - Length (Linear Feet):  Width (feet):  Acres:

#### 4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

- [ ] Wetlands directly abut RPW and thus are jurisprudential as adjacent wetlands.
  - [ ] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
  - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:
  - Provide acreage estimates for jurisprudential wetland in the review area:  Acres:

#### 5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

- [ ] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisprudential. Data supporting this conclusion is provided at Section III.C.
  - Provide acreage estimates for jurisprudential wetland in the review area:  Acres:

#### 6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres): __________

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction: __________

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale: __________

Length (linear feet): __________ Acres: __________

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters __________

Explain finding of no Significant Nexus: See Section III C.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: __________ width (ft): __________
☐ Other Non-wetland Waters MBR acres: __________
☐ Wetlands MBR acres: __________

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 727.35 linear feet (ft), 50.16 width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:
This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)    July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 161

   State: AZ  County/Parish/borough: Pinal County  City: N/A  
   Center coordinates of site: Lat. 32.8482°N  Long. -111.2599°W  
   Name of nearest waterbody:  
   Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: 
   Gila River between Powers Butte and Gillespie Dam  
   Name of watershed or Hydrologic Unit Code (HUC): 15050100

   ☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
   ☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

   ☐ Office (Desk) Determination.  Date:  
   ☑ Field Determination.  Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

   ☐ Waters subject to the ebb and flow of the tide.
   ☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters __________ Linear Feet  __________ Width (ft) and/or __________ Acres
      Wetlands Acres: __________

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

   ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
      Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: _____________________________ □ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
      - Watershed Size (sq mi): 49650
      - Drainage Area (sq mi): 0.00358
      - Average Annual Rainfall (in): 10
      - Average Annual Snowfall (in): 0
   (ii) Physical Characteristics:
      (a) Relationship with TNW
         □ Tributary flows directly to TNW
         ✔ Tributary flows through ______ tributaries before entering TNW
         Project waters are ______ river miles from TNW
Project waters are river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
- Average Width (ft):
- Average Depth (ft):
- Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- Silts
- Sands
- Concrete
- Muck
- Cobbles
- Gravel
- Substrate - Vegetation
- Other, Explain:

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.]

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

Tributary Geometry: Relatively Straight

Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow

Estimate average number of flow events in review area/year: 2-5

Describe Flow Regime: Ephemeral.

Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined Characteristics:

Subsurface Flow: No Explain:

Dye (or other) test performed:

Tributary Has (Check all that apply):

- Bed and Banks
- OHWM (check all the apply): OHWM Indicators:
  - Clear, natural line impressed on the bank
  - Changes in soil character
  - Shelving
  - Vegetation matted down, bent or absent
  - Leaf litter disturbed or washed away
  - Sediment deposition
  - Water staining
  - Presence of litter and debris
  - Destruction of terrestrial vegetation
  - Presence of wrack line
  - Sediment sorting
  - Scour
  - Multiple observed or predicted flow events
  - Abrupt change in plant community

Discontinuous? Explain:

Other (list):
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

- [ ] High tide line indicated by: ____________________________  [ ] Mean High water Mark indicated by: ______________________
  - [ ] oil or scum line along shore objects
  - [ ] fine shell or debris deposits (foreshore)
  - [ ] physical markings/characteristics
  - [ ] tidal gauges
  - [ ] other

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):
Explain: ____________________________

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

- [ ] Riparian Corridor Characteristics: ____________________________
- [ ] Wetland Fringe Characteristics: ____________________________

Habitat for:

- [ ] Federally Listed Species Explain findings: ____________________________
- [ ] Fish/Spawn Areas Explain findings: ____________________________
- [ ] Other environmentally - sensitive species Explain findings: ____________________________
- [ ] Aquatic/Wildlife diversity Explain: ____________________________

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:
- Wetland Size (ac): ____________________________
- Wetland Type, Explain: ____________________________
- Wetland Quality, Explain: ____________________________

Project Wetlands Cross or Serve as State Boundaries, Explain: ____________________________

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: ____________________________
Explain: ____________________________
Surface Flow is: ____________________________
Characteristics: ____________________________
Subsurface Flow: ____________________________
Explain Findings: ____________________________

(c) Wetland Adjacency Determination with Non-TNW:

- [ ] Wetland Not Directly Abutting Non-TNW
- [ ] Wetland Directly Abutting Non-TNW

- [ ] Discrete wetland hydrologic connection Explain: ____________________________
- [ ] Ecological connection Explain: ____________________________
- [ ] Separated by berm/barrier Explain: ____________________________

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW: ____________________________
Project Wetlands: Aerial Miles from TNW: ____________________________
Flow is From: ____________________________
Estimate approximate Location of Wetland within Floodplain: ____________________________...
(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).

Explain

Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

☐ Riparian Buffer Characteristics (type, average width):

☐ Vegetation type/percent cover. Explain:

Habitat for:

☐ Federally Listed Species Explain:

☐ Fish/Spawn Areas Explain:

☐ Other environmentally-sensitive species Explain:

☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: _______ Width (ft): _______ TNW Acres: _______

☐ Wetlands adjacent to TNWs: Acres: _______

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial: _______

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: _______

Provide estimates for jurisdictional waters in the review area (check all that apply):

☐ Tributary waters Linear Feet: _______ Width (Ft): _______

☐ Other non-wetland waters: Acres: _______

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): _______ Width (feet): _______ Acres: _______

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW: _______

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW: _______

Provide acreage estimates for jurisdictional wetland in the review area: Acres: _______

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres: _______

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): [ ] Acres: [ ]

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- [ ] Non wetland-Waters (i.e., rivers, streams): linear feet: [ ] width (ft): [ ]
- [ ] Other Non-wetland Waters MBR acres: [ ]
- [ ] Wetlands MBR acres: [ ]

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- [ ] Non-wetland waters 543.94 linear feet (ft), 4.87 width (ft)
- [ ] Other waters acres
- [ ] Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- [ ] Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.
- [ ] Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant
- [ ] Office Concurs with data sheets/delineation report
- [ ] Office Does Not Concur with data sheets/delineation report

**Additional Comments to Support JD:**
This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 162

State: AZ  County/Parish/borough: Pinal County  City: N/A

Center coordinates of site: Lat. 32.8482°N  Long. -111.2599”W

Name of nearest waterbody: Gila River between Powers Butte and Gillespie Dam

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date: 
☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):

      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area

      Non-Wetlands waters [Linear Feet] Width (ft) and/or [Acres]

      Wetlands Acres: 

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

   ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. **TNW**
   - Identify TNW: ____________________________  □ Vegetation

   Summarize rationale supporting determination:

2. **Wetland adjacent to TNW**

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) **General Area Conditions:**
   
   | Watershed Size (sq mi): | 49650 |
   | Drainage Area (sq mi):   | 0.05075 |
   | Average Annual Rainfall (in): | 10 |
   | Average Annual Snowfall (in):  | 0 |

   (ii) **Physical Characteristics:**

   (a) **Relationship with TNW**

   - □ Tributary flows directly to TNW
   - ✔ Tributary flows through ______ tributaries before entering TNW

   Project waters are ______ (or more) river miles from TNW
APPROVED JURISDICTIONAL DETERMINATION FORM
U.S. Army Corps of Engineers

Feature ID: 162

Project waters are river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:

Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
- Average Width (ft):
- Average Depth (ft):
- Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- Silts
- Sands
- Concrete
- Muck
- Cobbles
- Gravel
- Substrate - Vegetation

Other, Explain:

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

Tributary Geometry: Relatively Straight

Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow

Estimate average number of flow events in review area/year: 2-5

Describe Flow Regime: Ephemeral.

Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined Characteristics:
Subsurface Flow: No Explain:

Dye (or other) test performed:

Tributary Has (Check all that apply):

- Bed and Banks
- OHWM (check all the apply): OHWM Indicators:
  - Clear, natural line impressed on the bank
  - Changes in soil character
  - Shelving
  - Vegetation matted down, bent or absent
  - Leaf litter disturbed or washed away
  - Sediment deposition
  - Water staining

Other (list):

- Discontinuous? Explain:
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

- High tide line indicated by: [ ]
- Mean High water Mark indicated by: [ ]
- Oil or scum line along shore objects [ ]
- Fine shell or debris deposits (foreshore) [ ]
- Physical markings/characteristics [ ]
- Tidal gauges [ ]
- Other [ ]

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain: [ ]

Identify Specific Pollutants, if known: [ ]

(iv) Biological Characteristics. Channel supports (check all that apply):

- Riparian Corridor Characteristics: [ ]
- Wetland Fringe Characteristics: [ ]

Habitat for:

- Federally listed Species Explain findings: [ ]
- Fish/Spawn Areas Explain findings: [ ]
- Other environmentally sensitive species Explain findings: [ ]
- Aquatic/Wildlife diversity Explain: [ ]

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics Properties:

- Wetland Size (ac): [ ]
- Wetland Type, Explain: [ ]
- Wetland Quality, Explain: [ ]

Project Wetlands Cross or Serve as State Boundaries, Explain: [ ]

(b) General Flow Relationship with Non-TNW:

- Wetland Flow is: Explain: [ ]
- Surface Flow is: [ ]

- Characteristics: [ ]

- Subsurface Flow: Explain Findings: [ ]

(c) Wetland Adjacency Determination with Non-TNW:

- Wetland Directly Abutting Non-TNW [ ]
- Wetland Not Directly Abutting Non-TNW [ ]

- Discrete wetland hydrologic connection Explain: [ ]
- Ecological connection Explain: [ ]
- Separated by berm/barrier Explain: [ ]

(d) Proximity (Relationship) to TNW

- Project Wetlands: River Miles from TNW: [ ]
- Project Wetlands: Aerial Miles from TNW: [ ]

Flow is From: [ ]

Estimate approximate Location of Wetland within Floodplain: [ ]
(ii) Chemical Characteristics:
Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).

Explain

Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- [ ] Riparian Buffer  Characteristics (type, average width):
- [ ] Vegetation type/percent cover. Explain:

Habitat for:

- [ ] Federally Listed Species  Explain:
- [ ] Fish/Spawn Areas  Explain:
- [ ] Other environmentally-sensitive species  Explain:
- [ ] Aquatic/Wildlife Diversity  Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

□ TNWs  Linear Feet:  Width (ft):  TNW Acres

□ Wetlands adjacent to TNWs:  Acres:

2. RPWs that flow directly or indirectly into TNWs

□ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

□ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review area (check all that apply):

□ Tributary waters  Linear Feet:  Width (Ft).

□ Other non-wetland waters:  Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

□ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet):  Width (feet):  Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

□ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

□ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

□ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area:  Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

□ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area:  Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
162

Feature ID: 162

Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): ________ Acres: ________

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section III.C.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: ________ width (ft): ________
☐ Other Non-wetland Waters MBR acres: ________
☐ Wetlands MBR acres: ________

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☐ Non-wetland waters 698.91 linear feet, 6.88 width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

**SECTION II: SUMMARY OF FINDINGS**

**A. RHA SECTION 10 DETERMINATION OF JURISDICTION**

There **Are No** "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

**B. CWA SECTION 404 DETERMINATION OF JURISDICTION**

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):

   ☐ TNWs (new)
   ☐ Wetlands adjacent to TNWs
   ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
   ☐ Non-RPWs that flow directly or indirectly into TNWs
   ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
   ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
   ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
   ☐ Impoundments of jurisdictional waters
   ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ___________________________  □ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:
   Watershed Size (sq mi): 49650  Drainage Area (sq mi): 0.26392  Average Annual Rainfall (in): 10  Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:
   (a) Relationship with TNW
   □ Tributary flows directly to TNW  □ Tributary flows through ___  tributaries before entering TNW
   □ Tributary flows through 4 tributaries before entering TNW
   Project waters are 30 (or more) river miles from TNW
(b) General Tributary Characteristics

Tributary is: **Natural**

Tributary properties with respect to top of bank (estimate):
- Average Width (ft):
- Average Depth (ft):
- Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- Silts
- Cobble
- Sands
- Concrete
- Gravel
- Substrate - Vegetation
- Muck
- Other, Explain:

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: **Stable**.

Presence of Run/Riffle/Pool Complexes. Explain: **Not present**.

Tributary Geometry: Relatively Straight

Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: **Ephemeral Flow**

Estimate average number of flow events in review area/year: 2-5

Describe Flow Regime: Ephemeral.

Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined

Subsurface Flow: No

Dye (or other) test performed:

Tributary Has (Check all that apply):

- Bed and Banks
- OHWM (check all the apply): OHWM Indicators:
  - Clear, natural line impressed on the bank
  - Changes in soil character
  - Shelving
  - Vegetation matted down, bent or absent
  - Leaf litter disturbed or washed away
  - Sediment deposition
  - Water staining
  - Presence of litter and debris
  - Destruction of terrestrial vegetation
  - Presence of wrack line
  - Sediment sorting
  - Scour
  - Multiple observed or predicted flow events
  - Abrupt change in plant community

Other (list):

Discontinuous? Explain:
### 2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

#### (i) Physical Characteristics:

##### (a) General Wetland Characteristics

- **Properties:**
  - Wetland Size (ac): _______
  - Wetland Type, Explain: _______
  - Wetland Quality, Explain: _______

- Project Wetlands Cross or Serve as State Boundaries, Explain: _______

##### (b) General Flow Relationship with Non-TNW:

- Wetland Flow is: _______ Explain: _______

- Surface Flow is: _______

- Subsurface Flow: _______ Explain Findings: _______

- Characteristics: _______

##### (c) Wetland Adjacency Determination with Non-TNW:

- Wetland Directly Abutting Non-TNW
- Wetland Not Directly Abutting Non-TNW
  - Discrete wetland hydrologic connection Explain: _______
  - Ecological connection Explain: _______
  - Separated by berm/barrier Explain: _______

##### (d) Proximity (Relationship) to TNW

- Project Wetlands: River Miles from TNW: _______
- Project Wetlands: Aerial Miles from TNW: _______

- Flow is From: _______

- Estimate approximate Location of Wetland within Floodplain: _______
(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: etc.).

Explain

Identify specific pollutants, if known:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- Riparian Buffer Characteristics (type, average width):
- Vegetation type/percent cover. Explain:

Habitat for:

- Federally Listed Species Explain:
- Fish/Spawn Areas Explain:
- Other environmentally-sensitive species Explain:
- Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?, size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

- TNWs  Linear Feet:  Width (ft):  TNW Acres
- Wetlands adjacent to TNWs:  Acres:

2. RPWs that flow directly or indirectly into TNWs

- Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:
- Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
  - Provide estimates for jurisdictional waters in the review area (check all that apply):
    - Tributary waters  Linear Feet:  Width (ft).
    - Other non-wetland waters:  Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

- Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.C.
  - Provide estimates of jurisdictional waters within the review area (check all that apply):
    - Length (Linear Feet):  Width (feet):  Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

- Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
  - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
  - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:
  - Provide acreage estimates for jurisdictional wetland in the review area:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

- Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
  - Provide acreage estimates for jurisdictional wetland in the review area:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet):   Acres:   

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non-wetland-Waters (i.e., rivers, streams): linear feet:  width (ft):
☐ Other Non-wetland Waters MBR acres:
☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☒ Non-wetland waters  linear feet (ft),  width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:
This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  
   July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  
   Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 164  
   State: AZ  
   County/Parish/borough: Pinal County  
   City: N/A  
   Center coordinates of site: Lat. 32.8482°N  
   Long. -111.2599°W  
   Name of nearest waterbody:  
   Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:  
   Gila River between Powers Butte and Gillespie Dam  
   Name of watershed or Hydrologic Unit Code (HUC): 15050100

☐ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)
   ☑ Field Determination. Date: 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION
   There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.
   ☐ Waters subject to the ebb and flow of the tide.
   ☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION
   There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.
   1. Waters of the U.S.
      a. Indicate presence of water of U.S. in review area (Check all the apply):  
         ☐ TNWs (new)  
         ☐ Wetlands adjacent to TNWs  
         ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs  
         ☐ Non-RPWs that flow directly or indirectly into TNWs  
         ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs  
         ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs  
         ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs  
         ☐ Impoundments of jurisdictional waters  
         ☐ Isolated (interstate or intrastate) waters, including isolated wetlands
      b. Identify (estimate) size of waters of the U.S. in the review area  
         Non-Wetlands waters _______ Linear Feet _______ Width (ft) and/or _______ Acres  
         Wetlands Acres: _______
      c. Limits (boundaries) of Jurisdiction based on:

   2. Non-Regulated Waters/Wetlands (check if applicable):  
      ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
         Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

   Identify TNW: [ ] Vegetation

   Summarize rationale supporting determination:

2. Wetland adjacent to TNW

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

      | Watershed Size (sq mi): | 49650 |
      | Drainage Area (sq mi):  | 0.04120 |
      | Average Annual Rainfall (in): | 10 |
      | Average Annual Snowfall (in): | 0 |

   (ii) Physical Characteristics:

      (a) Relationship with TNW

         [ ] Tributary flows directly to TNW
         [x] Tributary flows through [4] tributaries before entering TNW

         Project waters are [30 (or more)] river miles from TNW
(b) General Tributary Characteristics

Tributary is: Natural

Explain:

Tributary properties with respect to top of bank (estimate):
- Average Width (ft): 
- Average Depth (ft): 
- Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- Silts
- Cobbles
- Sands
- Concrete
- Bedrock
- Gravel
- Substrate - Vegetation
- Muck
- Other, Explain:

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.]

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

Tributary Geometry: Relatively Straight

Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow

Estimate average number of flow events in review area/year: 2-5

Describe Flow Regime: Ephemeral.

Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined

Characteristics:

Subsurface Flow: No

Explain:

Dye (or other) test performed:

Tributary Has (Check all that apply):
- Bed and Banks
- OHWM (check all the apply): OHWM Indicators:
  - Clear, natural line impressed on the bank
  - Changes in soil character
  - Shelving
  - Vegetation matted down, bent or absent
  - Leaf litter disturbed or washed away
  - Sediment deposition
  - Water staining
  - Presence of litter and debris
  - Destruction of terrestrial vegetation
  - Presence of wrack line
  - Sediment sorting
  - Scour
  - Multiple observed or predicted flow events
  - Abrupt change in plant community

Other (list):

Discontinuous? Explain:
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

- [ ] High tide line indicated by: ____________________________
- [ ] Mean High water Mark indicated by: _______________________
- [ ] oil or scum line along shore objects
- [ ] fine shell or debris deposits (foreshore)
- [ ] physical markings/characteristics
- [ ] tidal gauges
- [ ] other

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain: ____________________________

Identify Specific Pollutants, if known: ____________________________

(iv) Biological Characteristics. Channel supports (check all that apply):

- [ ] Riparian Corridor Characteristics: ____________________________
- [ ] Wetland Fringe Characteristics: ____________________________

Habitat for:

- [ ] Federally Listed Species Explain findings: ____________________________
- [ ] Fish/Spawn Areas Explain findings: ____________________________
- [ ] Other environmentally -sensitive species Explain findings: ____________________________
- [ ] Aquatic/Wildlife diversity Explain: ____________________________

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

- Wetland Size (ac): ____________________________
- Wetland Type, Explain: ____________________________
- Wetland Quality, Explain: ____________________________

Project Wetlands Cross or Serve as State Boundaries, Explain: ____________________________

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: ____________________________ Explain: ____________________________

Surface Flow is: ____________________________

Characteristics: ____________________________

Subsurface Flow: ____________________________ Explain Findings: ____________________________

(c) Wetland Adjacency Determination with Non-TNW:

- [ ] Wetland Directly Abutting Non-TNW
- [ ] Wetland Not Directly Abutting Non-TNW

- [ ] Discrete wetland hydrologic connection Explain: ____________________________
- [ ] Ecological connection Explain: ____________________________
- [ ] Separated by berm/barrier Explain: ____________________________

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW: ____________________________

Project Wetlands: Aerial Miles from TNW: ____________________________

Flow is From: ____________________________

Estimate approximate Location of Wetland within Floodplain: ____________________________
(ii) Chemical Characteristics:
Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics etc.).

Explain

Identify specific pollutants, if known:

(iii) Biological Characteristics. Wetland supports (check all that apply):

☐ Riparian Buffer Characteristics (type, average width):

☐ Vegetation type/percent cover. Explain:

Habitat for:

☐ Federally Listed Species Explain:

☐ Fish/Spawn Areas Explain:

☐ Other environmentally-sensitive species Explain:

☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downstream flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

**D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)**

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

   - [ ] TNWs Linear Feet: ______ Width (ft): ______ TNW Acres ______
   - [ ] Wetlands adjacent to TNWs: Acres: ______

2. RPWs that flow directly or indirectly into TNWs

   - [ ] Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial: ______
   - [ ] Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: ______
     - Provide estimates for jurisdictional waters in the review area (check all that apply):
       - [ ] Tributary waters Linear Feet: ______ Width (Ft): ______
       - [ ] Other non-wetland waters: Acres: ______

3. Non-RPWs that flow directly or indirectly into TNWs.

   - [ ] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.
     - Provide estimates of jurisdictional waters within the review area (check all that apply):
       - Length (Linear Feet): ______ Width (feet): ______ Acres: ______

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

   - [ ] Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW: ______
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW: ______
      - Provide acreage estimates for jurisdictional wetland in the review area: Acres: ______

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

   - [ ] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
     - Provide acreage estimates for jurisdictional wetland in the review area: Acres: ______

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): _______ Acres: _______

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: _______ width(ft): _______
☐ Other Non-wetland Waters MBR acres: _______
☐ Wetlands MBR acres: _______

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☒ Non-wetland waters 1688.41 linear feet (ft), 6.42 width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☐ Field Determination.  
Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTON

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):
   ☐ TNWs (new)
   ☐ Wetlands adjacent to TNWs
   ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
   ☐ Non-RPWs that flow directly or indirectly into TNWs
   ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
   ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
   ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
   ☐ Impoundments of jurisdictional waters
   ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area
   Non-Wetlands waters Linear Feet Width (ft) and/or Acres
   Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
   ☐ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ____________ □ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:
      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.00975
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:
      (a) Relationship with TNW
         □ Tributary flows directly to TNW
         ☑ Tributary flows through 4 tributaries before entering TNW
         Project waters are 30 (or more) river miles from TNW
**APPROVED JURISDICTIONAL DETERMINATION FORM**

U.S. Army Corps of Engineers

Project waters are river Miles from tributary to RPW: 
Project waters are aerial (straight) miles from tributary to TNW: 
Project waters are aerial (straight) miles from tributary to RPW:

Project waters cross or serve as state boundaries. Explain: 

Identify flow route to TNW: 
Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

**General Tributary Characteristics**

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrolinc connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:
   - TNWs
   - Linear Feet: __________ Width (ft): ___________ TNW Acres __________
   - Wetlands adjacent to TNWs: Acres: __________

2. RPWs that flow directly or indirectly into TNWs
   - Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial: __________
   - Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: __________
      - Provide estimates for jurisdictional waters in the review area (check all that apply):
        - Tributary waters: Linear Feet: __________ Width (Ft): __________
        - Other non-wetland waters: Acres: __________

3. Non-RPWs that flow directly or indirectly into TNWs.
   - Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.
   - Provide estimates of jurisdictional waters within the review area (check all that apply):
     - Length (Linear Feet): __________ Width (feet): __________ Acres: __________

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.
   - Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW: __________
     - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW: __________
      - Provide acreage estimates for jurisdictional wetland in the review area: Acres: __________

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW
   - Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
      - Provide acreage estimates for jurisdictional wetland in the review area: Acres: __________

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC.2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
- Other Non-wetland Waters MBR acres:
- Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- Non-wetland waters linear feet: width (ft):
- Other waters acres
- Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☐ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There ☐ "Navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.
☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There ☐ "Waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):
☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWS that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWS that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters   Linear Feet  Width (ft) and/or  Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

   Identify TNW: ___________________________ □ Vegetation

   Summarize rationale supporting determination:

2. Wetland adjacent to TNW

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

   This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

   The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

   A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

   If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.07486
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:

      (a) Relationship with TNW

         □ Tributary flows directly to TNW
         ☑ Tributary flows through _______ tributaries before entering TNW

         Project waters are _______ river miles from TNW
Project waters are river Miles from tributary to RPW: 
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW: 
Project waters are aerial (straight) miles from tributary to RPW: 
Project waters cross or serve as state boundaries. Explain: 
Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics
Tributary is: Natural Explain: 
Tributary properties with respect to top of bank (estimate):
Average Width (ft): 
Average Depth (ft): 
Average Side Slopes: 3:1 
Primary tributary substrate composition (check all that apply):
- Silts
- Sands
- Concrete
- Muck
- Gravel
- Substrate - Vegetation
Other, Explain: 
Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.]
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:
Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: 
Surface Flow is: Discrete and Confined Characteristics: 
Subsurface Flow: No Explain: 
Dye (or other) test performed: 

Tributary Has (Check all that apply):
- Bed and Banks
- OHWM (check all the apply): OHWM Indicators:
  - Clear, natural line impressed on the bank
  - Changes in soil character
  - Shelving
  - Vegetation matted down, bent or absent
  - Leaf litter disturbed or washed away
  - Sediment deposition
  - Water staining
- Presence of litter and debris
- Destruction of terrestrial vegetation
- Presence of wrack line
- Sediment sorting
- Scour
- Multiple observed or predicted flow events
- Abrupt change in plant community

☐ Fish/Spawn Areas Explain: [Blank]

☐ Other environmentally-sensitive species Explain: [Blank]

☐ Aquatic/Wildlife Diversity Explain: [Blank]

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis: [Blank]

Wetland acres in total being considered in cumulative analysis: [Blank]

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?

• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?

• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage...
II. PRELIMINARY CONSIDERATIONS

1. NON-RPWs that flow directly or indirectly into TNWs:

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

[ ] Length (Linear Feet): [ ] Width (feet): [ ] Acres: [ ]

3. NON-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres: [ ]
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): __________  Acres: __________________

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: __________  width (ft): __________

☐ Other Non-wetland Waters MBR acres: __________

☐ Wetlands MBR acres: __________

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☒ Non-wetland waters 2195.29 linear feet, 6.56 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There ☐ "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There ☐ "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)

☐ Wetlands adjacent to TNWs

☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs

☐ Non-RPWs that flow directly or indirectly into TNWs

☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs

☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs

☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs

☐ Impoundments of jurisdictional waters

☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters _______ Linear Feet _______ Width (ft) and/or _______ Acres

Wetlands Acres: _______

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☒ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

 Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS
A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ____________________________
   □ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 0.00526
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

   - TNWs
   - Linear Feet: ___________________ Width (ft): ___________________ TNW Acres: ___________________
   - Wetlands adjacent to TNWs: Acres: ___________________

2. RPWs that flow directly or indirectly into TNWs

   - Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial: ___________________
   - Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: ___________________
     Provide estimates for jurisdictional waters in the review area (check all that apply):
     - Tributary waters
     - Linear Feet: ___________________ Width (Ft): ___________________
     - Other non-wetland waters: Acres: ___________________

3. Non-RPWs that flow directly or indirectly into TNWs.

   - Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c. Provide estimates of jurisdictional waters within the review area (check all that apply):
     - Length (Linear Feet): ___________________ Width (feet): ___________________ Acres: ___________________

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

   - Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
   - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW: ___________________
   - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW: ___________________
     Provide acreage estimates for jurisdictional wetland in the review area: Acres: ___________________

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

   - Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C. Provide acreage estimates for jurisdictional wetland in the review area: Acres: ___________________

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): 
Acres: 

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: 
width (ft): 

☐ Other Non-wetland Waters MBR acres: 

☐ Wetlands MBR acres: 

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters linear feet (ft), 
4.24 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

**SECTION I: BACKGROUND INFORMATION**

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  
July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  
Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION:  
Drainage Feature  

- **State:** AZ  
- **County/Parish/borough:** Pinal County  
- **City:** N/A

- **Center coordinates of site:** Lat. 32.8482°N, Long. -111.2599°W

- **Name of nearest waterbody:** Gila River between Powers Butte and Gillespie Dam

- **Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:**  

- **Name of watershed or Hydrologic Unit Code (HUC):** 15050100

- **Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request:**

- **Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form:**

**D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)**

- Office (Desk) Determination.  
- Field Determination.  

**SECTION II: SUMMARY OF FINDINGS**

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There are no "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

- Waters subject to the ebb and flow of the tide.
- Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There are no "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

- TNWs (new)
- Wetlands adjacent to TNWs
- Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
- Non-RPWs that flow directly or indirectly into TNWs
- Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
- Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
- Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
- Impoundments of jurisdictional waters
- Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area:

- Non-Wetlands waters Linear Feet Width (ft) and/or Acres
- Wetlands Acres:

2. Non-Regulated Waters/Wetlands (check if applicable):

- Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

  **Explain:** Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ____________________________ ☐ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 0.02768
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:

   (a) Relationship with TNW

   ☐ Tributary flows directly to TNW
   ☑ Tributary flows through ___________ tributaries before entering TNW

   Project waters are ___________ (or more) river miles from TNW
Project waters are river Miles from tributary to RPW: 
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW: 
Project waters are aerial (straight) miles from tributary to RPW: 
Project waters cross or serve as state boundaries. Explain: 

Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: 

Tributary properties with respect to top of bank (estimate):
Average Width (ft): 
Average Depth (ft): 
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- ☑ Silts
- ☐ Sands
- ☐ Concrete
- ☐ Muck
- ☐ Gravel
- ☑ Substrate - Vegetation
- Other, Explain: 

Tributary Condition/ Stability [e.g., highly eroding, sloughing banks. Explain: Stable. 

Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight 
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow 
Estimate average number of flow events in review area/year: 2-5 
Describe Flow Regime: Ephemeral. 

Other Information on Duration and Volume: 

Surface Flow is: Discrete and Confined Characteristics: 
Subsurface Flow: No Explain: 
☐ Dye (or other) test performed: 

Tributary Has (Check all that apply):
- ☐ Bed and Banks 
- ☑ OHWM (check all the apply): OHWM Indicators:
  - ☑ Clear, natural line impressed on the bank
  - ☑ Changes in soil character
  - ☑ Shelving
  - ☑ Vegetation matted down, bent or absent
  - ☑ Leaf litter disturbed or washed away
  - ☑ Sediment deposition
  - ☑ Water staining
  - Other (list): 
- ☐ Discontinuous? Explain: 
- ☑ Presence of litter and debris
- ☑ Destruction of terrestrial vegetation
- ☑ Presence of wrack line
- ☑ Sediment sorting
- ☑ Scour
- ☑ Multiple observed or predicted flow events
- ☑ Abrupt change in plant community
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

- □ High tide line indicated by: ____________________________  □ Mean High water Mark indicated by: ____________________________
- □ oil or scum line along shore objects
- □ fine shell or debris deposits (foreshore)
- □ physical markings/characteristics
- □ tidal gauges
- □ other

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain: ____________________________

Identify Specific Pollutants, if known: ____________________________

(iv) Biological Characteristics. Channel supports (check all that apply):

- □ Riparian Corridor Characteristics: ____________________________
- □ Wetland Fringe Characteristics: ____________________________

Habitat for:

- □ Federally Listed Species Explain findings: ____________________________
- □ Fish/Spawn Areas Explain findings: ____________________________
- □ Other environmentally-sensitive species Explain findings: ____________________________
- □ Aquatic/Wildlife diversity Explain: ____________________________

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

- Wetland Size (ac): ____________________________
- Wetland Type, Explain: ____________________________
- Wetland Quality, Explain: ____________________________

Project Wetlands Cross or Serve as State Boundaries, Explain: ____________________________

(b) General Flow Relationship with Non-TNW:

- Wetland Flow is: ____________________________  Explain: ____________________________
- Surface Flow is: ____________________________
- Characteristics: ____________________________
- Subsurface Flow: ____________________________  Explain Findings: ____________________________

(c) Wetland Adjacency Determination with Non-TNW:

- □ Wetland Not Directly Abutting Non-TNW
  - □ Discrete wetland hydrologic connection Explain: ____________________________
  - □ Ecological connection Explain: ____________________________
  - □ Separated by berm/barrier Explain: ____________________________

(d) Proximity (Relationship) to TNW

- Project Wetlands: River Miles from TNW: ____________________________
- Project Wetlands: Aerial Miles from TNW: ____________________________
- Flow is From: ____________________________

Estimate approximate Location of Wetland within Floodplain: ____________________________
(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).

Explain

Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- Riparian Buffer Characteristics (type, average width): 

- Vegetation type/percent cover. Explain: 

  Habitat for:
  - Federally Listed Species Explain: 
  - Fish/Spawn Areas Explain: 
  - Other environmentally-sensitive species Explain: 
  - Aquatic/Wildlife Diversity Explain: 

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis: 

Wetland acres in total being considered in cumulative analysis: 

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review area (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.C.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): ______ Acres: ______

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section III C2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: ______ width (ft): ______
☐ Other Non-wetland Waters MBR acres: ______
☐ Wetlands MBR acres: ______

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 427.71 linear feet (ft), 3.64 width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.
☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

SECTION I: BACKGROUND INFORMATION
A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)   
July 5, 2013
B. DISTRICT OFFICE, FILE NAME, AND NUMBER  
Los Angeles District, File No. Pending
C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 169
State: AZ County/Parish/borough: Pinal County City: N/A
Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W
Name of nearest waterbody:  
Gila River between Powers Butte and Gillespie Dam
Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:  
Gila River between Powers Butte and Gillespie Dam
Name of watershed or Hydrologic Unit Code (HUC): 15050100
☐ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)
☐ Office (Desk) Determination. Date:  
☒ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS
A. RHA SECTION 10 DETERMINATION OF JURISDICTION
There ☐ "Navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.
☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION
There ☐ "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.
  1. Waters of the U.S.
     a. Indicate presence of water of U.S. in review area (Check all the apply):
        ☐ TNWs (new)
        ☐ Wetlands adjacent to TNWs
        ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
        ☐ Non-RPWs that flow directly or indirectly into TNWs
        ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
        ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
        ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
        ☐ Impoundments of jurisdictional waters
        ☐ Isolated (interstate or intrastate) waters, including isolated wetlands
     b. Identify (estimate) size of waters of the U.S. in the review area
        Non-Wetlands waters _______________ Linear Feet _______________ Width (ft) and/or _______________ Acres
        Wetlands Acres:  
     c. Limits (boundaries) of Jurisdiction based on:
  2. Non-Regulated Waters/Wetlands (check if applicable):
     ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
        Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. **TNW**
   - Identify TNW: ________________
   - ☐ Vegetation
   - Summarize rationale supporting determination:

2. **Wetland adjacent to TNW**
   - Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   - **(i) General Area Conditions:**
     - Watershed Size (sq mi): 49650
     - Drainage Area (sq mi): 0.00314
     - Average Annual Rainfall (in): 10
     - Average Annual Snowfall (in): 0
   - **(ii) Physical Characteristics:**
     - ☐ Tributary flows directly to TNW
     - ☑ Tributary flows through _______ tributaries before entering TNW
     - Project waters are _______ river miles from TNW
(b) General Tributary Characteristics

Tributary is: Natural

Tributary properties with respect to top of bank (estimate):
- Average Width (ft):
- Average Depth (ft):
- Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- Silts
- Gravel
- Substrate - Vegetation

Tributary Condition/ Stability [e.g., highly eroding, sloughing banks. Explain: Stable.

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

Tributary Geometry: Relatively Straight

Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow

Estimate average number of flow events in review area/year: 2-5

Describe Flow Regime: Ephemeral.

Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined

Subsurface Flow: No

Dye (or other) test performed: No

Tributary Has (Check all that apply):
- Bed and Banks
- OHWM (check all the apply): OHWM Indicators:
  - Clear, natural line impressed on the bank
  - Changes in soil character
  - Shelving
  - Vegetation matted down, bent or absent
  - Leaf litter disturbed or washed away
  - Sediment deposition
  - Water staining
  - Presence of litter and debris
  - Destruction of terrestrial vegetation
  - Presence of wrack line
  - Sediment sorting
  - Scour
  - Multiple observed or predicted flow events
  - Abrupt change in plant community

Discontinuous? Explain:
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by: ______________________☐ Mean High water Mark indicated by: ______________________
☐ oil or scum line along shore objects ☐ survey to available datum
☐ fine shell or debris deposits (foreshore) ☐ physical markings
☐ physical markings/characteristics ☐ vegetation lines/changes in vegetation types
☐ tidal gauges
☐ other

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc): Explain: ______________________
Identify Specific Pollutants, if known: ______________________

☐ Federally Listed Species Explain findings: ______________________
☐ Fish/Spawn Areas Explain findings: ______________________
☐ Other environmentally sensitive species Explain findings: ______________________
☐ Aquatic/Wildlife diversity Explain: ______________________

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics
Properties:
Wetland Size (ac): ______________________
Wetland Type, Explain: ______________________
Wetland Quality, Explain: ______________________
Project Wetlands Cross or Serve as State Boundaries, Explain: ______________________

(b) General Flow Relationship with Non-TNW:
Wetland Flow is: ______________________ Explain: ______________________
Surface Flow is: ______________________
Characteristics: ______________________
Subsurface Flow: ______________________ Explain Findings: ______________________

(c) Wetland Adjacency Determination with Non-TNW:
☐ Wetland Directly Abutting Non-TNW
☐ Wetland Not Directly Abutting Non-TNW
☐ Discrete wetland hydrologic connection Explain: ______________________
☐ Ecological connection Explain: ______________________
☐ Separated by berm/barrier Explain: ______________________

(d) Proximity (Relationship) to TNW
Project Wetlands: River Miles from TNW: ______________________
Project Wetlands: Aerial Miles from TNW: ______________________
Flow is From: ______________________
Estimate approximate Location of Wetland within Floodplain: ______________________
(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; etc.).

Explain

Identify specific pollutants, if known:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- Riparian Buffer  Characteristics (type, average width):
- Vegetation  type/percent cover. Explain:
- Habitat for:
  - Federally Listed Species  Explain:
  - Fish/Spawn Areas  Explain:
  - Other environmentally-sensitive species  Explain:
  - Aquatic/Wildlife Diversity  Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gilspie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review area (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.C.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
- Other Non-wetland Waters MBR acres:
- Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- Non-wetland waters 112.32 linear feet, 2.95 width (ft)
- Other waters acres
- Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:
SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)    July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 17

State: AZ     County/Parish/borough: Pinal     City: N/A

Center coordinates of site: Lat. 32.8482°N     Long. -111.2599°W

Name of nearest waterbody: Gila River between Powers Butte and Gillespie Dam

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☐ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date: 
☐ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters ___________ Linear Feet ___________ Width (ft) and/or ___________ Acres
      Wetlands Acres: ___________

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

   ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ____________________________  □ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
       Watershed Size (sq mi): 49650
       Drainage Area (sq mi): 9.40044
       Average Annual Rainfall (in): 10
       Average Annual Snowfall (in): 0
   (ii) Physical Characteristics:
       □ Tributary flows directly to TNW
       □ Tributary flows through 4 tributaries before entering TNW
       Project waters are 30 (or more) river miles from TNW
Project waters are river Miles from tributary to RPW: 
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW: 
Project waters are aerial (straight) miles from tributary to RPW: 
Project waters cross or serve as state boundaries. Explain: 

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics
Tributary is: Natural Explain: 

Tributary properties with respect to top of bank (estimate):
Average Width (ft): 
Average Depth (ft): 
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- [ ] Silts
- [ ] Sands
- [ ] Concrete
- [ ] Muck
- [ ] Cobble
- [ ] Gravel
- [ ] Substrate - Vegetation
- Other, Explain: 

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

Tributary Geometry: Relatively Straight

Tributary Gradient (approximate average slope): 1%

(c) Flow:
Tributary Provides for: Ephemeral Flow

Estimate average number of flow events in review area/year: 2-5

Describe Flow Regime: Ephemeral.

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary? size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

   □ TNWs Linear Feet: __________ Width (ft): __________ TNW Acres __________

   □ Wetlands adjacent to TNWs: Acres: __________

2. RPWs that flow directly or indirectly into TNWs

   □ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial: __________

   □ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: __________

   Provide estimates for jurisdictional waters in the review area (check all that apply):

   □ Tributary waters Linear Feet: __________ Width (Ft): __________

   □ Other non-wetland waters: Acres: __________

3. Non-RPWs that flow directly or indirectly into TNWs.

   □ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.C.

   Provide estimates of jurisdictional waters within the review area (check all that apply):

   Length (Linear Feet): __________ Width (feet): __________ Acres: __________

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

   □ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

   □ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW: __________

   □ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW: __________

   Provide acreage estimates for jurisdictional wetland in the review area: Acres: __________

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

   □ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide acreage estimates for jurisdictional wetland in the review area: Acres: __________

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction: ________________________

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands
   
   b. Identify (estimate) size of waters of the U.S. in review area
      Non-Wetlands waters Linear Feet Width (ft) and/or Acres
      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

   2. Non-Regulated Waters/Wetlands (check if applicable):
      ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
      Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ________________________  □ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.00434
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:
      (a) Relationship with TNW
         □ Tributary flows directly to TNW
         ✔ Tributary flows through 4 tributaries before entering TNW
         Project waters are 30 (or more) river miles from TNW
**Feature ID:** APPROVED JURISDICTIONAL DETERMINATION FORM

**Identify flow route to TNW**

Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

### (b) General Tributary Characteristics

**Tributary is:** Natural

Tributary properties with respect to top of bank (estimate):

- **Average Width (ft):**
- **Average Depth (ft):**
- **Average Side Slopes:** 3:1

Primary tributary substrate composition (check all that apply):

- Silts
- Cobble
- Bedrock
- Sands
- Concrete
- Gravel
- Substrate - Vegetation
- Muck

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.]

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

**Tributary Geometry:** Relatively Straight

**Tributary Gradient (approximate average slope):** 1%

### (c) Flow

**Tributary Provides for:** Ephemeral Flow

**Estimate average number of flow events in review area/year:** 2-5

Describe Flow Regime: Ephemeral.

**Other Information on Duration and Volume:**

**Surface Flow is:** Discrete and Confined

**Subsurface Flow:** No

**Dye (or other) test performed:**

**Tributary Has (Check all that apply):**

- Bed and Banks
- **OHWM (check all the apply): OHWM Indicators:**
  - Clear, natural line impressed on the bank
  - Changes in soil character
  - Shelving
  - Vegetation matted down, bent or absent
  - Leaf litter disturbed or washed away
  - Sediment deposition
  - Water staining
  - **Presence of litter and debris**
  - Destruction of terrestrial vegetation
  - Presence of wrack line
  - Sediment sorting
  - Scour
  - Multiple observed or predicted flow events
  - Abrupt change in plant community

**Discontinuous?** Explain:
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ____________________________    □ Vegetation

   Summarize rationale supporting determination:

2. Wetland adjacent to TNW

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 0.00273
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:

   (a) Relationship with TNW

   □ Tributary flows directly to TNW
   ✓ Tributary flows through ____ tributaries before entering TNW

   Project waters are ____ (or more) river miles from TNW

   Summarize rationale supporting determination:

   Summarize conclusion that a significant nexus exists for this tributary:

   Summarize rationale supporting conclusion that wetlands are "adjacent"
Project waters are river Miles from tributary to RPW: 
Project waters are 30 (or more) aerial (straight) miles from tributary to TPW:  
Project waters are aerial (straight) miles from tributary to RPW: 
Project waters cross or serve as state boundaries. Explain: 

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: 

Tributary properties with respect to top of bank (estimate):

- Average Width (ft): 
- Average Depth (ft): 
- Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

- Silts
- Sands
- Concrete
- Muck
- Cobble
- Gravel
- Substrate - Vegetation

Other, Explain: 

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain]: Stable.

Presence of Run/Riffle/Pool Complexes. Explain: Not present.

Tributary Geometry: Relatively Straight

Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow

Describe Flow Regime: Ephemeral.

Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined Characteristics: 

Subsurface Flow: No Explain: 

Dye (or other) test performed: 

Tributary Has (Check all that apply):

- Bed and Banks
- OHWM (check all the apply): OHWM Indicators:
  - Clear, natural line impressed on the bank
  - Changes in soil character
  - Shelving
  - Vegetation matted down, bent or absent
  - Leaf litter disturbed or washed away
  - Sediment deposition
  - Water staining

Other (list): 

Discontinuous? Explain: 

Ephemeral Flow

2-5

2-5
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

- High tide line indicated by:
- Oil or scum line along shore objects
- Fine shell or debris deposits (foreshore)
- Physical markings/characteristics
- Tidal gauges
- Other
- Mean High water Mark indicated by:
- Survey to available datum
- Physical markings
- Vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

- Riparian Corridor Characteristics:
- Wetland Fringe Characteristics:

Habitat for:

- Federally Listed Species
- Fish/Spawn Areas
- Other environmentally sensitive species
- Aquatic/Wildlife diversity

Explain findings:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

- Properties:
  - Wetland Size (ac):
  - Wetland Type, Explain:
  - Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

- Wetland Flow is:
- Surface Flow is:
  - Characteristics:
  - Subsurface Flow:

Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- Wetland Directly Abutting Non-TNW
- Wetland Not Directly Abutting Non-TNW
  - Discrete wetland hydrologic connection
  - Ecological connection
  - Separated by berm/barrier

Explain:

(d) Proximity (Relationship) to TNW

- Project Wetlands: River Miles from TNW:
- Project Wetlands: Aerial Miles from TNW:
- Flow is From:

Estimate approximate Location of Wetland within Floodplain:
(ii) Chemical Characteristics:
Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

☐ Riparian Buffer  Characteristics (type, average width): 
☐ Vegetation type/percent cover. Explain: 
Habitat for:
☐ Federally Listed Species  Explain: 
☐ Fish/Spawn Areas  Explain: 
☐ Other environmentally-sensitive species  Explain: 
☐ Aquatic/Wildlife Diversity  Explain: 

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis: 
Wetland acres in total being considered in cumulative analysis: 
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.
Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downstream flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:
   - TNWs
   - Wetlands adjacent to TNWs

2. RPWs that flow directly or indirectly into TNWs
   - Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:
   - Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
     - Provide estimates for jurisdictional waters in the review area (check all that apply):
       - Tributary waters
       - Other non-wetland waters

3. Non-RPWs that flow directly or indirectly into TNWs.
   - Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.
   - Provide estimates of jurisdictional waters within the review area (check all that apply):

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.
   - Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
     - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW
   - Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
- Other Non-wetland Waters MBR acres:
- Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- ✔ Non-wetland waters linear feet (ft), width (ft)
- Other waters acres
- Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- ✔ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.
- ✔ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant
  - Office Concurs with data sheets/delineation report
  - Office Does Not Concur with data sheets/delineation report
- Data Sheets Prepared by the Corps
- Corps Navigable Water Study

Additional Comments to Support JD:
This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  
   July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  
   Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION:  Drainage Feature 172  
   State: AZ  
   County/Parish/borough: Pinal  
   City: N/A  
   Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W  
   Name of nearest waterbody: Gila River between Powers Butte and Gillespie Dam  
   Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:  
   Name of watershed or Hydrologic Unit Code (HUC): 15050100  
   ☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request  
   ☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc…) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)  
   ☐ Office (Desk) Determination. Date:  
   ☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION  
   There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.  
   ☐ Waters subject to the ebb and flow of the tide.  
   ☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION  
   There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.  
   1. Waters of the U.S.  
      a. Indicate presence of water of U.S. in review area (Check all the apply):  
         ☐ TNWs (new)  
         ☐ Wetlands adjacent to TNWs  
         ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs  
         ☐ Non-RPWs that flow directly or indirectly into TNWs  
         ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs  
         ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs  
         ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs  
         ☐ Impoundments of jurisdictional waters  
         ☐ Isolated (interstate or intrastate) waters, including isolated wetlands  
      b. Identify (estimate) size of waters of the U.S. in the review area  
         Non-Wetlands waters Linear Feet Width (ft) and/or Acres  
         Wetlands Acres:  
      c. Limits (boundaries) of Jurisdiction based on:  
   2. Non-Regulated Waters/Wetlands (check if applicable):  
      ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:  
         Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ___________________________   □ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.00188
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0
   (ii) Physical Characteristics:
      (a) Relationship with TNW
         □ Tributary flows directly to TNW
         ✔ Tributary flows through 4 tributaries before entering TNW
         Project waters are 30 (or more) river miles from TNW
Project waters are river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics
Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft):

___________________________________________________________________________________________________________________________________________________________________________________________________________________________________________________________________________________________________________________________________
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:
   - TNWs Linear Feet: ______ Width (ft): ______ TNW Acres: ______
   - Wetlands adjacent to TNWs: Acres: ______

2. RPWs that flow directly or indirectly into TNWs
   - Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial: ______
   - Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: ______
     Provide estimates for jurisdictional waters in the review area (check all that apply):
     - Tributary waters Linear Feet: ______ Width (Ft): ______
     - Other non-wetland waters: Acres: ______

3. Non-RPWs that flow directly or indirectly into TNWs.
   - Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.
     Provide estimates of jurisdictional waters within the review area (check all that apply):
     Length (Linear Feet): ______ Width (feet): ______ Acres: ______

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.
   - Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW: ______
     - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW: ______
     Provide acreage estimates for jurisdictional wetland in the review area: Acres: ______

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW
   - Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
     Provide acreage estimates for jurisdictional wetland in the review area: Acres: ______

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
- Other Non-wetland Waters MBR acres:
- Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- Non-wetland waters linear feet (ft), width (ft)
- Other waters acres
- Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.
- Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant
- Office Concurs with data sheets/delineation report
- Office Does Not Concur with data sheets/delineation report
- Data Sheets Prepared by the Corps
- Corps Navigable Water Study
- US Geological Survey Hydrologic Atlas
  - USGS NHD Data
  - USGS 8 and 12 digit HUC Maps
- US Geological Survey Map(s) Scale and Quad Name:
  Cactus Forest, Eloy North, Picacho Pass, Picacho Reservoir, Picacho Reservoir SE, Red Rock, and Valley Farms 7.5-Minute Quadrangles

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres):

Data supporting this conclusion is provided at Section III.C.

Long. -111.2599°W

Name of nearest waterbody:  
Gila River between Powers Butte and Gillespie Dam

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:  

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request  
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)  
☐ Office (Desk) Determination. Date:  
☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS  

A. RHA SECTION 10 DETERMINATION OF JURISDICTION  
There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.  
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION  
There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):  
☐ TNWs (new)  
☐ Wetlands adjacent to TNWs  
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs  
☐ Non-RPWs that flow directly or indirectly into TNWs  
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs  
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs  
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs  
☐ Impoundments of jurisdictional waters  
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area  

<table>
<thead>
<tr>
<th>Non-Wetlands waters</th>
<th>Linear Feet</th>
<th>Width (ft) and/or Acres</th>
<th>Wetlands Acres</th>
</tr>
</thead>
</table>

2. Non-Regulated Waters/Wetlands (check if applicable):  
☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:  

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ____________________  □ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
       Watershed Size (sq mi): 49650
       Drainage Area (sq mi): 0.83883
       Average Annual Rainfall (in): 10
       Average Annual Snowfall (in): 0
   (ii) Physical Characteristics:
       □ Tributary flows directly to TNW
       ✓ Tributary flows through 4 tributaries before entering TNW
       Project waters are 30 (or more) river miles from TNW
Project waters are [ ] river Miles from tributary to RPW: [ ]  
Project waters are [ ] 30 (or more) aerial (straight) miles from tributary to TNW: [ ]  
Project waters are [ ] aerial (straight) miles from tributary to RPW: [ ]  
Project waters cross or serve as state boundaries. Explain: [ ]  
Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River. [ ]  

(b) General Tributary Characteristics  
Tributary is: Natural  
Explain: [ ]  
Tributary properties with respect to top of bank (estimate):  
Average Width (ft): [ ]  
Average Depth (ft): [ ]  
Average Side Slopes: 3:1  
Primary tributary substrate composition (check all that apply):  
- [ ] Silts  
- [ ] Sands  
- [ ] Concrete  
- [ ] Muck  
- [ ] Gravel  
- [ ] Substrate - Vegetation  
Other, Explain: [ ]  
Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.  
Presence of Run/Riffle/Pool Complexes. Explain: Not present.  
Tributary Geometry: Relatively Straight  
Tributary Gradient (approximate average slope): 1%  

(c) Flow:  
Tributary Provides for: Ephemeral Flow  
Estimate average number of flow events in review area/year: 2-5  
Describe Flow Regime: Ephemeral.  
Other Information on Duration and Volume: [ ]  
Surface Flow is: Discrete and Confined  
Characteristics: [ ]  
Subsurface Flow: No  
Explain: [ ]  
Dye (or other) test performed: [ ]  
Tributary Has (Check all that apply):  
- [ ] Bed and Banks  
- [ ] OHWM (check all the apply): OHWM Indicators:  
  - [ ] Clear, natural line impressed on the bank  
  - [ ] Changes in soil character  
  - [ ] Shelving  
  - [ ] Vegetation matted down, bent or absent  
  - [ ] Leaf litter disturbed or washed away  
  - [ ] Sediment deposition  
  - [ ] Water staining  
  - Presence of litter and debris  
  - Destruction of terrestrial vegetation  
  - Presence of wrack line  
  - Sediment sorting  
  - Scour  
  - Multiple observed or predicted flow events  
  - Abrupt change in plant community  
Other (list): [ ]  
Discontinuous? Explain: [ ]
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

- High tide line indicated by: __________________________
- Mean High water Mark indicated by: __________________________
- oil or scum line along shore objects
- fine shell or debris deposits (foreshore)
- physical markings/characteristics
- tidal gauges
- other

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain: ___________________________________________

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

- Riparian Corridor Characteristics: ___________________________
- Wetland Fringe Characteristics: ___________________________

Habitat for:

- Federally Listed Species Explain findings: ___________________________
- Fish/Spawn Areas Explain findings: ___________________________
- Other environmentally sensitive species Explain findings: ________________
- Aquatic/Wildlife diversity Explain: ___________________________

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

- Wetland Size (ac): ___________________________
- Wetland Type, Explain: ___________________________
- Wetland Quality, Explain: ___________________________

Project Wetlands Cross or Serve as State Boundaries, Explain: ___________________________

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: ___________________________

Surface Flow is: ___________________________

Characteristics: ___________________________

Subsurface Flow: ___________________________

Explain Findings: ___________________________

(c) Wetland Adjacency Determination with Non-TNW:

- Wetland Directly Abutting Non-TNW
- Wetland Not Directly Abutting Non-TNW

- Discrete wetland hydrologic connection Explain: ___________________________
- Ecological connection Explain: ___________________________
- Separated by berm/barrier Explain: ___________________________

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW: ___________________________

Project Wetlands: Aerial Miles from TNW: ___________________________

Flow is From: ___________________________

Estimate approximate Location of Wetland within Floodplain: ___________________________
(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).

Explain

Identify specific pollutants, if known:

(iii) Biological Characteristics. Wetland supports (check all that apply):

☐ Riparian Buffer Characteristics (type, average width):

☐ Vegetation type/percent cover. Explain:

Habitat for:

☐ Federally Listed Species Explain:

☐ Fish/Spawn Areas Explain:

☐ Other environmentally-sensitive species Explain:

☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downstream flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

   - [ ] TNWs Linear Feet: Width (ft): TNW Acres
   - [ ] Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

   - [ ] Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:
   - [ ] Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
     - Provide estimates for jurisdictional waters in the review area (check all that apply):
       - [ ] Tributary waters Linear Feet: Width (Ft).
       - [ ] Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

   - [ ] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.
     - Provide estimates of jurisdictional waters within the review area (check all that apply):
       - Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

   - [ ] Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
     - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:
     - Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

   - [ ] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
     - Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres): [ ]

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction: [ ]

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale: [ ]

Length (linear feet): [ ] Acres: [ ]

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters [ ]

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- Non wetland-Waters (i.e., rivers, streams): linear feet: [ ] width (ft): [ ]
- Other Non-wetland Waters MBR acres: [ ]
- Wetlands MBR acres: [ ]

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- Non-wetland waters 1300.75 linear feet (ft), 8.02 width (ft)
- Other waters acres
- Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date: 
☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There ☐ "Navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There ☐ "Waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):

       ☐ TNWs (new)
       ☐ Wetlands adjacent to TNWs
       ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
       ☐ Non-RPWs that flow directly or indirectly into TNWs
       ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
       ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
       ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
       ☐ Impoundments of jurisdictional waters
       ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area

       Non-Wetlands waters Linear Feet Width (ft) and/or Acres

       Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

       ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

       Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: □ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 0.07130
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:

   (a) Relationship with TNW

   □ Tributary flows directly to TNW
   ✔ Tributary flows through 4 tributaries before entering TNW
   Project waters are 30 (or more) river miles from TNW
**Feature ID:** APPROVED JURISDICTIONAL DETERMINATION FORM

  - □ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

   - TNWs Linear Feet: [ ] Width (ft): [ ] TNW Acres [ ]
   - Wetlands adjacent to TNWs: Acres: [ ]

2. RPWs that flow directly or indirectly into TNWs

   - Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial: [ ]
   - Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: [ ]
     - Provide estimates for jurisdictional waters in the review area (check all that apply):
       - Tributary waters Linear Feet: [ ] Width (Ft): [ ]
       - Other non-wetland waters: Acres: [ ]

3. Non-RPWs that flow directly or indirectly into TNWs.

   - Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

     Provide estimates of jurisdictional waters within the review area (check all that apply):
     Length (Linear Feet): [ ] Width (feet): [ ] Acres: [ ]

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

   - Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW: [ ]
     - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW: [ ]
     Provide acreage estimates for jurisdictional wetland in the review area: Acres: [ ]

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

   - Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

     Provide acreage estimates for jurisdictional wetland in the review area: Acres: [ ]

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): [ ] Acres: [ ]

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- [ ] Non wetland-Waters (i.e., rivers, streams): linear feet: [ ] width (ft): [ ]
- [ ] Other Non-wetland Waters MBR: acres: [ ]
- [ ] Wetlands MBR: acres: [ ]

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- [ ] Non-wetland waters: 819.88 linear feet (ft), 13.84 width (ft)
- [ ] Other waters: [ ] acres
- [ ] Wetlands: [ ] acres

**SECTION II: SUMMARY OF FINDINGS**

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

- There are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

- Waters subject to the ebb and flow of the tide.

- Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

- There are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

  1. Waters of the U.S.
      
      a. Indicate presence of water of U.S. in review area (Check all the apply):
      
      - Wetlands adjacent to TNWs
      - Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      - Non-RPWs that flow directly or indirectly into TNWs
      - Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      - Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      - Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      - Impoundments of jurisdictional waters
      - Isolated (interstate or intrastate) waters, including isolated wetlands

      b. Identify (estimate) size of waters of the U.S. in the review area
      
      - Non-Wetlands waters: Linear Feet Width (ft) and/or Acres
      - Wetlands Acres:

      c. Limits (boundaries) of Jurisdiction based on:

  2. Non-Regulated Waters/Wetlands (check if applicable):

      - Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

      Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1; only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ___________________________  □ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 0.13689
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:
      (a) Relationship with TNW
      □ Tributary flows directly to TNW
      ✔ Tributary flows through _______ tributaries before entering TNW
      Project waters are _______ river miles from TNW
(b) General Tributary Characteristics

Tributary is: Natural

Tributary properties with respect to top of bank (estimate):
- Average Width (ft):
- Average Depth (ft):
- Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
- Silts
- Cobble
- Sands
- Concrete
- Gravel
- Bedrock
- Substrate - Vegetation
- Other, Explain:

Tributary Condition/ Stability [e.g., highly eroding, sloughing banks. Explain:]
- Stable.

Presence of Run/Riffle/Pool Complexes. Explain:
- Not present.

Tributary Geometry:
- Relatively Straight

Tributary Gradient (approximate average slope):
- 1%

(c) Flow:

Tributary Provides for:
- Ephemeral Flow

Estimate average number of flow events in review area/year:
- 2-5

Describe Flow Regime:
- Ephemeral.

Other Information on Duration and Volume:

Surface Flow is:
- Discrete and Confined

Subsurface Flow:
- No

Dye (or other) test performed:
- Explain:

Tributary Has (Check all that apply):

- Bed and Banks
- OHWM (check all the apply): OHWM Indicators:
  - Clear, natural line impressed on the bank
  - Changes in soil character
  - Shelving
  - Vegetation matted down, bent or absent
  - Leaf litter disturbed or washed away
  - Sediment deposition
  - Water staining
  - Presence of litter and debris
  - Destruction of terrestrial vegetation
  - Presence of wrack line
  - Sediment sorting
  - Scour
  - Multiple observed or predicted flow events
  - Abrupt change in plant community

Other (list):
If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

- High tide line indicated by: ____________
- Mean High water Mark indicated by: ____________
- oil or scum line along shore objects
- fine shell or debris deposits (foreshore)
- physical markings/characteristics
- tidal gauges
- other

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain: ____________

Identify Specific Pollutants, if known: ____________

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

### D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

#### 1. TNWs and Adjacent Wetlands.

- Check all that apply and provide size estimates in review area:
  - TNWs
  - Width (ft):
  - TNW Acres
  - Wetlands adjacent to TNWs:
  - Acres:

#### 2. RPWs that flow directly or indirectly into TNWs

- Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:
  - Provide estimates for jurisdictional waters in the review area (check all that apply):
    - Tributary waters
    - Linear Feet:
    - Width (Ft):
    - Other non-wetland waters:
    - Acres:

#### 3. Non-RPWs that flow directly or indirectly into TNWs.

- Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

  Provide estimates of jurisdictional waters within the review area (check all that apply):
  - Length (Linear Feet):
  - Width (feet):
  - Acres:

#### 4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

- Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
  - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
  - Provide acreage estimates for jurisdictional wetland in the review area:
    - Acres:

#### 5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

- Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

  Provide acreage estimates for jurisdictional wetland in the review area:
  - Acres:

#### 6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): ________  Acres: ________

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: ________  width (ft): ________
☐ Other Non-wetland Waters MBR acres: ________
☐ Wetlands MBR acres: ________

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters  1095.97 linear feet (ft),  7.99 width (ft)
☐ Other waters _____ acres
☐ Wetlands _____ acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.
☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

☐ Office (Desk) Determination. Date:  
☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICATION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICATION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters ______ Linear Feet ______ Width (ft) and/or ______ Acres
      Wetlands Acres: ______

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
   ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

      Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

   Identify TNW: [ ] Vegetation

   Summarize rationale supporting determination:

2. Wetland adjacent to TNW

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 0.03969
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:

   (a) Relationship with TNW

   [ ] Tributary flows directly to TNW
   [ ] Tributary flows through [ ] tributaries before entering TNW

   Project waters are [ ] river miles from TNW
Project waters are river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

### (b) General Tributary Characteristics

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis: 

Wetland acres in total being considered in cumulative analysis: 

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands.  Check all that apply and provide size estimates in review area:

   ☐ TNWs  Linear Feet:  Width (ft):  TNW Acres  
   ☐ Wetlands adjacent to TNWs:  Acres:  

2. RPWs that flow directly or indirectly into TNWs

   ☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

   ☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

   Provide estimates for jurisdictional waters in the review area (check all that apply):

   ☐ Tributary waters  Linear Feet:  Width (Ft).
   ☐ Other non-wetland waters:  Acres:  

3. Non-RPWs that flow directly or indirectly into TNWs.

   ☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

   Provide estimates of jurisdictional waters within the review area (check all that apply):

   Length (Linear Feet):  Width (feet):  Acres:  

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

   ☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

   ☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

   ☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW:

   Provide acreage estimates for jurisdictional wetland in the review area:  Acres:  

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

   ☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide acreage estimates for jurisdictional wetland in the review area:  Acres:  

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): _______ Acres: _______

F. NON‐JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non‐Jurisdictional Waters

Provide acreage estimates for non‐jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland‐Waters (i.e., rivers, streams): linear feet: _______ width (ft): _______
☐ Other Non‐wetland Waters MBR acres: _______
☐ Wetlands MBR acres: _______

Provide acreage estimates for non‐jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☐ Non‐wetland waters 575.82 linear feet (ft), 9.16 width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☐ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.
☐ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION
A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  
July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  
Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION:  
Drainage Feature 177

State: AZ  
County/Parish/borough: Pinal County  
City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:  
Gila River between Powers Butte and Gillespie Dam

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:  

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☐ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request
☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)
☐ Office (Desk) Determination. Date:  
☒ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS
A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.
   a. Indicate presence of water of U.S. in review area (Check all the apply):
      □ TNWs (new)
      □ Wetlands adjacent to TNWs
      □ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      □ Non-RPWs that flow directly or indirectly into TNWs
      □ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      □ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      □ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      □ Impoundments of jurisdictional waters
      □ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters Linear Feet Width (ft) and/or Acres
      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):
   ☒ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
   Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS
A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ____________________________  □ Vegetation
   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.01017
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:
      (a) Relationship with TNW
         □ Tributary flows directly to TNW
         ✔ Tributary flows through 4 tributaries before entering TNW
         Project waters are 30 (or more) river miles from TNW
**Feature ID:** APPROVED JURISDICTIONAL DETERMINATION FORM

**U.S. Army Corps of Engineers**

Project waters are river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

**(b) General Tributary Characteristics**

<table>
<thead>
<tr>

3. Characteristics of all wetlands adjacent to the tributary  (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
• Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
• Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

- [ ] TNWs
  - Linear Feet:
  - Width (ft):
  - TNW Acres
- [ ] Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

- [ ] Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial:
- [ ] Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
  - Provide estimates for jurisdictional waters in the review area (check all that apply):
    - [ ] Tributary waters
      - Linear Feet:
      - Width (ft):
    - [ ] Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

- [ ] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.
  - Provide estimates of jurisdictional waters within the review area (check all that apply):
    - Length (Linear Feet):
    - Width (feet):
    - Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

- [ ] Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
  - [ ] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:
  - Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

- [ ] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
  - Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): ________ Acres: ________

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: ________ width (ft): ________
☐ Other Non-wetland Waters MBR acres: ________
☐ Wetlands MBR acres: ________

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☐ Non-wetland waters acres
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☐ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.  
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)  
☐ Wetlands adjacent to TNWs  
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs  
☐ Non-RPWs that flow directly or indirectly into TNWs  
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs  
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs  
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs  
☐ Impoundments of jurisdictional waters  
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters  Linear Feet  Width (ft) and/or  Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☒ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

   Identify TNW: ____________________________

   □ Vegetation

   Summarize rationale supporting determination:

2. Wetland adjacent to TNW

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (ii) Physical Characteristics:

   (a) Relationship with TNW

   □ Tributary flows directly to TNW
   ✔ Tributary flows through 4 tributaries before entering TNW

   Project waters are 30 (or more) river miles from TNW
Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

- Tributary is: Natural
- Tributary properties with respect to top of bank (estimate):
  - Average Width (ft): 
  - Average Depth (ft): 
  - Average Side Slopes: 3:1
- Primary tributary substrate composition (check all that apply):
  - Silts
  - Cobble
  - Bedrock
  - Sands
  - Concrete
  - Muck
  - Gravel
  - Substrate - Vegetation
  - Other, Explain: 
- Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
- Presence of Run/Riffle/Pool Complexes. Explain: Not present.
- Tributary Geometry: Relatively Straight
- Tributary Gradient (approximate average slope): 1%

(c) Flow:

- Tributary Provides for: Ephemeral Flow
- Estimate average number of flow events in review area/year: 2-5
- Describe Flow Regime: Ephemeral.
- Other Information on Duration and Volume:
- Surface Flow is: Discrete and Confined
- Characteristics: 
- Subsurface Flow: No
- Explain: 
- Dye (or other) test performed: 

- Tributary Has (Check all that apply):
  - Bed and Banks
  - OHWM (check all the apply): OHWM Indicators:
    - Clear, natural line impressed on the bank
    - Changes in soil character
    - Shelving
    - Vegetation matted down, bent or absent
    - Leaf litter disturbed or washed away
    - Sediment deposition
    - Water staining
    - Presence of litter and debris
    - Destruction of terrestrial vegetation
    - Presence of wrack line
    - Sediment sorting
    - Scour
    - Multiple observed or predicted flow events
    - Abrupt change in plant community
    - Other (list): 
  - Discontinuous? Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?, size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW.

Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downstream flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

- [ ] TNWs Linear Feet: Width (ft): TNW Acres
- [ ] Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

- [ ] Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial: 
- [ ] Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: 
  Provide estimates for jurisdictional waters in the review area (check all that apply):
  - [ ] Tributary waters Linear Feet: Width (Ft).
  - [ ] Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

- [ ] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

  Provide estimates of jurisdictional waters within the review area (check all that apply):
  Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

- [ ] Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
  - [ ] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW: 
  - [ ] Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW: 
  Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

- [ ] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
  Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
- Other Non-wetland Waters MBR acres:
- Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- Non-wetland waters 634.45 linear feet (ft), 6.07 width (ft) acres
- Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICATION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):

      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area

      Non-Wetlands waters __________ Linear Feet  Width (ft) and/or __________ Acres

      Wetlands Acres: __________

   c. Limits (boundaries) of Jurisdiction based on:

      2. Non-Regulated Waters/Wetlands (check if applicable):

         ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

         Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1; only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. **TNW**

   Identify TNW: ______________________☐ Vegetation

   Summarize rationale supporting determination:

2. **Wetland adjacent to TNW**

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) **General Area Conditions:**

   Watershed Size (sq mi): 49650

   Drainage Area (sq mi): 0.00483

   Average Annual Rainfall (in): 10

   Average Annual Snowfall (in): 0

   (ii) **Physical Characteristics:**

       (a) **Relationship with TNW**

       ☐ Tributary flows directly to TNW

       ☑ Tributary flows through 4 tributaries before entering TNW

       Project waters are 30 (or more) river miles from TNW
Project waters are river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW
Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft): —
Average Depth (ft): —
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):
☐ Silts

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis: [space for input]

Wetland acres in total being considered in cumulative analysis: [space for input]

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage...
2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

<table>
<thead>

☐ Office (Desk) Determination. Date:  
☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION  
There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.  
☐ Waters subject to the ebb and flow of the tide.  
☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION  
There Are No "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.  

1. Waters of the U.S.  
   a. Indicate presence of water of U.S. in review area (Check all the apply):  
      ☐ TNWs (new)  
      ☐ Wetlands adjacent to TNWs  
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs  
      ☐ Non-RPWs that flow directly or indirectly into TNWs  
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs  
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs  
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs  
      ☐ Impoundments of jurisdictional waters  
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands  
   b. Identify (estimate) size of waters of the U.S. in the review area  
      Non-Wetlands waters Linear Feet Width (ft) and/or Acres  
      Wetlands Acres:  
   c. Limits (boundaries) of Jurisdiction based on:  

2. Non-Regulated Waters/Wetlands (check if applicable):  
   ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:  
     Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

   Identify TNW: ____________________________    ☐ Vegetation

   Summarize rationale supporting determination:

2. Wetland adjacent to TNW

   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

   (i) General Area Conditions:

   Watershed Size (sq mi): 49650
   Drainage Area (sq mi): 0.04048
   Average Annual Rainfall (in): 10
   Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:

   (a) Relationship with TNW

   ☐ Tributary flows directly to TNW
   ☑ Tributary flows through 4 tributaries before entering TNW

   Project waters are 30 (or more) river miles from TNW
Project waters are river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:

Identify flow route to TNW
Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: ____________ Width (ft): ________ TNW Acres ________

☐ Wetlands adjacent to TNWs: Acres: ________

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial: ________

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: ________

Provide estimates for jurisdictional waters in the review area (check all that apply):

☐ Tributary waters Linear Feet: ____________ Width (Ft): ________ Acres: ________

☐ Other non-wetland waters: Acres: ________

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): ________ Width (feet): ________ Acres: ________

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW: ________

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW: ________

Provide acreage estimates for jurisdictional wetland in the review area: Acres: ________

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres: ________

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
☐ Other Non-wetland Waters MBR acres:
☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters linear feet (ft), width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.
☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant
☐ Office Concurs with data sheets/delineation report
☐ Office Does Not Concur with data sheets/delineation report
☐ Data Sheets Prepared by the Corps
☐ Corps Navigable Water Study

   2. Non-Regulated Waters/Wetlands (check if applicable):
      ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
      Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
   Identify TNW: ________________________________ □ Vegetation

   Summarize rationale supporting determination:

2. Wetland adjacent to TNW
   Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   (i) General Area Conditions:
      Watershed Size (sq mi): 49650
      Drainage Area (sq mi): 0.36711
      Average Annual Rainfall (in): 10
      Average Annual Snowfall (in): 0
   (ii) Physical Characteristics:
      (a) Relationship with TNW
         □ Tributary flows directly to TNW
         ✓ Tributary flows through 4 tributaries before entering TNW
         Project waters are 30 (or more) river miles from TNW
Project waters are river Miles from tributary to RPW: 
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW: 
Project waters are aerial (straight) miles from tributary to RPW: 

Identify flow route to TNW Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:

Wetland acres in total being considered in cumulative analysis:

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all of its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below.

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW.

Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage
does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

- TNWs
- Linear Feet: __________________ Width (ft): _______ TNW Acres _______
- Wetlands adjacent to TNWs: Acres: _______

2. RPWs that flow directly or indirectly into TNWs

- Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial: __________________
- Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: __________________
  - Provide estimates for jurisdictional waters in the review area (check all that apply):
    - Tributary waters Linear Feet: _______ Width (ft): _______
    - Other non-wetland waters: Acres: _______

3. Non-RPWs that flow directly or indirectly into TNWs.

- Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.C.
  - Provide estimates of jurisdictional waters within the review area (check all that apply):
    - Length (Linear Feet): _______ Width (feet): _______ Acres: _______

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

- Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
  - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW: __________________
  - Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW: __________________
    - Provide acreage estimates for jurisdictional wetland in the review area: Acres: _______

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

- Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
  - Provide acreage estimates for jurisdictional wetland in the review area: Acres: _______

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.
7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction: 

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:
Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet: width (ft):
☐ Other Non-wetland Waters MBR acres:
☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 2146.30 linear feet (ft), 12.22 width (ft)
☐ Other waters acres
☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

**Additional Comments to Support JD:**
SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD)  
July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER  
Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION:  
Drainage Feature 181

State: AZ  
County/Parish/borough: Pinal County  
City: N/A

Center coordinates of site: Lat. 32.8482°N  
Long. -111.2599°W

Name of nearest waterbody:  
Gila River between Powers Butte and Gillespie Dam

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:  

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☐ Check if map/diagram of review are are/are potential jurisdical areas is/are available upon request

☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination.  
Date:  

☐ Field Determination.  Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There  Are No ("navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There  Are No ("waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

   a. Indicate presence of water of U.S. in review area (Check all the apply):
      ☐ TNWs (new)
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. Identify (estimate) size of waters of the U.S. in the review area
      Non-Wetlands waters Linear Feet Width (ft) and/or Acres
      Wetlands Acres:

   c. Limits (boundaries) of Jurisdiction based on:

   2. Non-Regulated Waters/Wetlands (check if applicable):
      ☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:
      Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.
SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. **TNW**
   - Identify TNW:  
   - ☐ Vegetation
   - Summarize rationale supporting determination:

2. **Wetland adjacent to TNW**
   - Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW
   
   (i) General Area Conditions:
   - Watershed Size (sq mi): 49650
   - Drainage Area (sq mi): 0.00885
   - Average Annual Rainfall (in): 10
   - Average Annual Snowfall (in): 0

   (ii) Physical Characteristics:
   - ☐ Tributary flows directly to TNW
   - ☑ Tributary flows through 4 tributaries before entering TNW
   - Project waters are 30 (or more) river miles from TNW
**APPROVED JURISDICTIONAL DETERMINATION FORM**

**U.S Army Corps of Engineers**

**Feature ID:** 181

<table>
