The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00518
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 543.79 linear feet (ft), 3.76 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 185

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 185

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 185

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00570
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 185

Project waters are ____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are ____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: ____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: ____

Tributary properties with respect to top of bank (estimate):

Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 445.64 linear feet (ft), 3.94 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 186

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 186

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 186

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.82629
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 186

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 2477.22 linear feet (ft), 7.87 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 187

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.02996
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 187

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac):

Wetland Type, Explain:

Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: Explain:

Surface Flow is:

Characteristics:

Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- ☐ Wetland Directly Abutting Non-TNW
- ☐ Wetland Not Directly Abutting Non-TNW
  - ☐ Discrete wetland hydrologic connection Explain:
  - ☐ Ecologcal connection Explain:
  - ☐ Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1135.46 linear feet (ft), 6.40 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 188

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 188

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 188

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01025
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 188

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft):
Average Depth (ft):
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

- [x] Silts
- [ ] Sands
- [ ] Concrete
- [ ] Muck
- [ ] Cobbles
- [x] Gravel
- [ ] Bedrock
- [ ] Substrate - Vegetation

Other, Explain:

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined Characteristics:
Subsurface Flow: No Explain:

- [ ] Dye (or other) test performed:

Tributary Has (Check all that apply):

- [ ] Bed and Banks
- [x] OHWM (check all the apply): OHWM Indicators:
  - [ ] Clear, natural line impressed on the bank
  - [x] Changes in soil character
  - [ ] Shelving
  - [ ] Vegetation matted down, bent or absent
  - [ ] Leaf litter disturbed or washed away
  - [ ] Sediment deposition
  - [ ] Water staining
  - [x] Presence of litter and debris
  - [ ] Destruction of terrestrial vegetation
  - [ ] Presence of wrack line
  - [ ] Sediment sorting
  - [x] Scour
  - [ ] Multiple observed or predicted flow events
  - [ ] Abrupt change in plant community

Other (list):

- [ ] Discontinuous? Explain:

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 547.46 linear feet (ft), 4.49 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 189

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 189

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00299
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 189

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	277.43	linear feet (ft),	4.40	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

Feature ID: 19

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 19

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 19

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.02718
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1190.50 linear feet (ft), 7.51 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 190

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 190

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 190

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.14774
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 190

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 190

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac):

Wetland Type, Explain:

Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: Explain:

Surface Flow is:

Characteristics:

Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- ☐ Wetland Directly Abutting Non-TNW
- ☐ Wetland Not Directly Abutting Non-TNW
  - ☐ Discrete wetland hydrologic connection Explain:
  - ☐ Ecologcal connection Explain:
  - ☐ Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1008.20 linear feet (ft), 9.20 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 191

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 191

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 191

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01246
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 595.72 linear feet (ft), 5.95 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Feature ID: 192

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 192

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 192

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	1.19622
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1908.74 linear feet (ft), 9.00 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 193

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 193

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 193

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW:

☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00699
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 193

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

APPROVED JURISDICTIONAL DETERMINATION FORM

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 251.96 linear feet (ft), 3.19 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 194

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 194

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 194

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01640
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 194

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1634.49 linear feet (ft), 6.95 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 195

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 195

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 195

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	5.34043
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 195

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

APPROVED JURISDICTIONAL DETERMINATION FORM

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 2857.43 linear feet (ft), 10.69 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Feature ID: 196

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 196

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00130
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 196

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft):
Average Depth (ft):
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

- [x] Silts

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 84.80 linear feet (ft), 3.77 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

U.S Army Cops of Engineers

Feature ID: 197

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 197

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 197

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.02388
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	699.89	linear feet (ft),	7.30	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 198

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 198

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 198

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.07026
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 198

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 198

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac):

Wetland Type, Explain:

Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: Explain:

Surface Flow is:

Characteristics:

Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- ☐ Wetland Directly Abutting Non-TNW
- ☐ Wetland Not Directly Abutting Non-TNW
  - ☐ Discrete wetland hydrologic connection Explain:
  - ☐ Ecologcal connection Explain:
  - ☐ Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 671.58 linear feet (ft), 12.24 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 199

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 199

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 199

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00363
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 387.56 linear feet (ft), 4.18 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 2

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 2

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.04365
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 162.60 linear feet (ft), 2.66 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 20

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 20

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00463
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 20

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 142.06 linear feet (ft), 5.43 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 200

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 200

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.04058
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 200

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 2174.84 linear feet (ft), 5.75 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 201

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 201

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 201

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.15621
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 201

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	938.37	linear feet (ft),	11.95	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

U.S Army Cops of Engineers

Feature ID: 202

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 202

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 202

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.23554
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 202

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 202

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	621.22	linear feet (ft),	13.20	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Feature ID: 203

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 203

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 203

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00834
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 778.84 linear feet (ft), 5.30 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 204

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 204

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 204

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00423
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 204

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft):
Average Depth (ft):
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

- [x] Silts
- [ ] Sands
- [ ] Concrete
- [ ] Muck
- [ ] Cobbles
- [x] Gravel
- [ ] Bedrock
- [ ] Substrate - Vegetation

Other, Explain:

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined Characteristics:
Subsurface Flow: No Explain:

- [ ] Dye (or other) test performed:

Tributary Has (Check all that apply):

- [ ] Bed and Banks
- [x] OHWM (check all the apply): OHWM Indicators:
  - [ ] Clear, natural line impressed on the bank
  - [x] Changes in soil character
  - [ ] Shelving
  - [ ] Vegetation matted down, bent or absent
  - [ ] Leaf litter disturbed or washed away
  - [ ] Sediment deposition
  - [ ] Water staining
  - [x] Presence of litter and debris
  - [ ] Destruction of terrestrial vegetation
  - [ ] Presence of wrack line
  - [ ] Sediment sorting
  - [x] Scour
  - [ ] Multiple observed or predicted flow events
  - [ ] Abrupt change in plant community

Other (list):

- [ ] Discontinuous? Explain:

APPROVED JURISDICTIONAL DETERMINATION FORM

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac):

Wetland Type, Explain:

Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: Explain:

Surface Flow is:

Characteristics:

Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- ☐ Wetland Directly Abutting Non-TNW
- ☐ Wetland Not Directly Abutting Non-TNW
  - ☐ Discrete wetland hydrologic connection Explain:
  - ☐ Ecologcal connection Explain:
  - ☐ Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 400.43 linear feet (ft), 4.95 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 205

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 205

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 205

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00447
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 205

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck

Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	814.08	linear feet (ft),	4.57	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

Feature ID: 206

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 206

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:
☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 206

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.81863
Average Annual Rainfall (in):	10

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	834.47	linear feet (ft),	16.76	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 207

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 207

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 207

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW:

☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00391
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 207

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

APPROVED JURISDICTIONAL DETERMINATION FORM

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 254.82 linear feet (ft), 4.28 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Feature ID: 208

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 208

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 208

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00286
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 164.91 linear feet (ft), 3.30 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 209

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 209

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.04612
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 209

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 209

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 688.05 linear feet (ft), 8.35 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Feature ID: 21

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 21

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 21

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01843
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 21

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1355.31 linear feet (ft), 9.50 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

U.S Army Cops of Engineers

Feature ID: 210

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 210

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.78566
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1307.07 linear feet (ft), 9.15 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 211

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 211

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 211

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.02293
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 211

Project waters are ____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are ____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: ____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: ____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): ____
Average Depth (ft): ____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: ____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: ____

Surface Flow is: Discrete and Confined Characteristics: ____
Subsurface Flow: No Explain: ____
☐ Dye (or other) test performed: ____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): ____

☐ Discontinuous? Explain: ____

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 211

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac):

Wetland Type, Explain:

Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: Explain:

Surface Flow is:

Characteristics:

Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

☐ Wetland Directly Abutting Non-TNW

☐ Wetland Not Directly Abutting Non-TNW

- ☐ Discrete wetland hydrologic connection Explain:
- ☐ Ecologcal connection Explain:
- ☐ Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1333.95 linear feet (ft), 5.68 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 212

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 212

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 212

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00331
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 212

Project waters are ____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are ____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: ____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: ____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): ____
Average Depth (ft): ____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: ____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: ____

Surface Flow is: Discrete and Confined Characteristics: ____
Subsurface Flow: No Explain: ____
☐ Dye (or other) test performed: ____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): ____

☐ Discontinuous? Explain: ____

APPROVED JURISDICTIONAL DETERMINATION FORM

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 260.14 linear feet (ft), 4.20 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 213

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 213

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.03889
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1692.32 linear feet (ft), 5.57 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 214

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 214

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 214

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01502
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 214

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 967.53 linear feet (ft), 4.26 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 215

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 215

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 215

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	4.21754
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 3846.49 linear feet (ft), 9.56 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 216

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 216

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 216

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.28853
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 216

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft):
Average Depth (ft):
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

- [x] Silts

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 987.34 linear feet (ft), 9.77 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

U.S Army Cops of Engineers

Feature ID: 217

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 217

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 217

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.02043
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 217

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft):
Average Depth (ft):
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

- [x] Silts
- [ ] Sands
- [ ] Concrete
- [ ] Muck
- [ ] Cobbles
- [x] Gravel
- [ ] Bedrock
- [ ] Substrate - Vegetation

Other, Explain:

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined Characteristics:
Subsurface Flow: No Explain:

- [ ] Dye (or other) test performed:

Tributary Has (Check all that apply):

- [ ] Bed and Banks
- [x] OHWM (check all the apply): OHWM Indicators:
  - [ ] Clear, natural line impressed on the bank
  - [x] Changes in soil character
  - [ ] Shelving
  - [ ] Vegetation matted down, bent or absent
  - [ ] Leaf litter disturbed or washed away
  - [ ] Sediment deposition
  - [ ] Water staining
  - [x] Presence of litter and debris
  - [ ] Destruction of terrestrial vegetation
  - [ ] Presence of wrack line
  - [ ] Sediment sorting
  - [x] Scour
  - [ ] Multiple observed or predicted flow events
  - [ ] Abrupt change in plant community

Other (list):

- [ ] Discontinuous? Explain:

APPROVED JURISDICTIONAL DETERMINATION FORM

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 572.21 linear feet (ft), 5.24 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 218

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 218

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 218

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.02786
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 818.67 linear feet (ft), 4.42 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

- ☐ Office Concurs with data sheets/delineation report
- ☐ Office Does Not Concur with data sheets/delineation report

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 219

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 219

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 219

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.02008
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 219

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 219

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac):

Wetland Type, Explain:

Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: Explain:

Surface Flow is:

Characteristics:

Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- ☐ Wetland Directly Abutting Non-TNW
- ☐ Wetland Not Directly Abutting Non-TNW
  - ☐ Discrete wetland hydrologic connection Explain:
  - ☐ Ecologcal connection Explain:
  - ☐ Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	525.96	linear feet (ft),	3.98	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 22

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 22

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01130
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 22

Project waters are ____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are ____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: ____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: ____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): ____
Average Depth (ft): ____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: ____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: ____

Surface Flow is: Discrete and Confined Characteristics: ____
Subsurface Flow: No Explain: ____
☐ Dye (or other) test performed: ____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): ____

☐ Discontinuous? Explain: ____

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	382.61	linear feet (ft),	7.12	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Feature ID: 220

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 220

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 220

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	25.63946
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 220

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____

Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1309.80 linear feet (ft), 23.06 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 221

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 221

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 221

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.06941
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1344.66 linear feet (ft), 11.35 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 222

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.04156
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1528.69 linear feet (ft), 6.00 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 223

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 223

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 223

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.06288
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 223

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):
Average Width (ft): [ ]
Average Depth (ft): [ ]
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1266.85 linear feet (ft), 5.45 width (ft)

☐ Other waters acres

☐ Wetlands acres

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 224

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 224

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	1.57447
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 224

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac):

Wetland Type, Explain:

Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: Explain:

Surface Flow is:

Characteristics:

Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- ☐ Wetland Directly Abutting Non-TNW
- ☐ Wetland Not Directly Abutting Non-TNW
  - ☐ Discrete wetland hydrologic connection Explain:
  - ☐ Ecologcal connection Explain:
  - ☐ Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 2450.10 linear feet (ft), 7.02 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 225

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 225

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 225

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.02324
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 606.49 linear feet (ft), 5.27 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 226

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 226

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 226

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00249
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 226

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):
Average Width (ft): [ ]
Average Depth (ft): [ ]
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

- [x] Silts
- [ ] Sands
- [ ] Concrete
- [ ] Muck
- [ ] Cobbles
- [x] Gravel
- [ ] Bedrock
- [ ] Substrate - Vegetation

Other, Explain: [ ]

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: [ ]

Surface Flow is: Discrete and Confined Characteristics: [ ]
Subsurface Flow: No Explain: [ ]

- [ ] Dye (or other) test performed: [ ]

Tributary Has (Check all that apply):

- [ ] Bed and Banks
- [x] OHWM (check all the apply): OHWM Indicators:
  - [ ] Clear, natural line impressed on the bank
  - [x] Changes in soil character
  - [ ] Shelving
  - [ ] Vegetation matted down, bent or absent
  - [ ] Leaf litter disturbed or washed away
  - [ ] Sediment deposition
  - [ ] Water staining
  - [x] Presence of litter and debris
  - [ ] Destruction of terrestrial vegetation
  - [ ] Presence of wrack line
  - [ ] Sediment sorting
  - [x] Scour
  - [ ] Multiple observed or predicted flow events
  - [ ] Abrupt change in plant community

Other (list): [ ]

- [ ] Discontinuous? Explain: [ ]

APPROVED JURISDICTIONAL DETERMINATION FORM

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac):

Wetland Type, Explain:

Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: Explain:

Surface Flow is:

Characteristics:

Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- ☐ Wetland Directly Abutting Non-TNW
- ☐ Wetland Not Directly Abutting Non-TNW
  - ☐ Discrete wetland hydrologic connection Explain:
  - ☐ Ecologcal connection Explain:
  - ☐ Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 554.80 linear feet (ft), 3.31 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 227

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.02233
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1421.78 linear feet (ft), 4.97 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 228

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 228

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.05064
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 892.73 linear feet (ft), 4.06 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 229

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 229

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:
☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 229

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00529
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 229

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	452.98	linear feet (ft),	2.60	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 23

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 23

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.04021
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 2013.21 linear feet (ft), 5.95 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 230

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 230

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 230

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	1.75071
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 230

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 2766.92 linear feet (ft), 9.67 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 231

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 231

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 231

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01382
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 231

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1267.83 linear feet (ft), 4.85 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 232

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 232

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 232

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00522
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 589.16 linear feet (ft), 3.61 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 233

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 233

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 233

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00819
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 233

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):
Average Width (ft): [ ]
Average Depth (ft): [ ]
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

- [x] Silts
- [ ] Sands
- [ ] Concrete
- [ ] Muck
- [ ] Cobbles
- [x] Gravel
- [ ] Bedrock
- [ ] Substrate - Vegetation

Other, Explain: [ ]

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: [ ]

Surface Flow is: Discrete and Confined Characteristics: [ ]
Subsurface Flow: No Explain: [ ]

- [ ] Dye (or other) test performed: [ ]

Tributary Has (Check all that apply):

- [ ] Bed and Banks
- [x] OHWM (check all the apply): OHWM Indicators:
  - [ ] Clear, natural line impressed on the bank
  - [x] Changes in soil character
  - [ ] Shelving
  - [ ] Vegetation matted down, bent or absent
  - [ ] Leaf litter disturbed or washed away
  - [ ] Sediment deposition
  - [ ] Water staining
  - [x] Presence of litter and debris
  - [ ] Destruction of terrestrial vegetation
  - [ ] Presence of wrack line
  - [ ] Sediment sorting
  - [x] Scour
  - [ ] Multiple observed or predicted flow events
  - [ ] Abrupt change in plant community

Other (list): [ ]

- [ ] Discontinuous? Explain: [ ]

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac):

Wetland Type, Explain:

Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

Characteristics:

Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- ☐ Wetland Directly Abutting Non-TNW
- ☐ Wetland Not Directly Abutting Non-TNW
  - ☐ Discrete wetland hydrologic connection Explain:
  - ☐ Ecologcal connection Explain:
  - ☐ Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 553.40 linear feet (ft), 3.73 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Feature ID: 234

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 234

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:
☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 234

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.19229
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1968.46 linear feet (ft), 7.01 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Feature ID: 235

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 235

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 235

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.03472
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1550.84 linear feet (ft), 4.89 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 236

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 236

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01951
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 236

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):
Average Width (ft): [ ]
Average Depth (ft): [ ]
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 947.91 linear feet (ft), 4.80 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 237

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 237

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 237

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.11830
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 237

Project waters are ____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 733.63 linear feet (ft), 12.67 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 238

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 238

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 238

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00746
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 238

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft):
Average Depth (ft):

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 802.44 linear feet (ft), 4.87 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 239

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 239

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 239

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.31402
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 239

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft):
Average Depth (ft):
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

- [x] Silts

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 2001.32 linear feet (ft), 10.28 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 24

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 24

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.03086
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 24

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	2293.44	linear feet (ft),	5.46	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 240

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 240

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01101
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 240

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac):

Wetland Type, Explain:

Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: Explain:

Surface Flow is:

Characteristics:

Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- ☐ Wetland Directly Abutting Non-TNW
- ☐ Wetland Not Directly Abutting Non-TNW
  - ☐ Discrete wetland hydrologic connection Explain:
  - ☐ Ecologcal connection Explain:
  - ☐ Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 565.88 linear feet (ft), 6.14 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 241

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 241

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 241

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00681
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 241.59 linear feet (ft), 2.91 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Feature ID: 242

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 242

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 242

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00396
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	597.11	linear feet (ft),	4.30	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 243

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 243

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 243

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00943
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 243

Project waters are ____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are ____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: ____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: ____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): ____
Average Depth (ft): ____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: ____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: ____

Surface Flow is: Discrete and Confined Characteristics: ____
Subsurface Flow: No Explain: ____
☐ Dye (or other) test performed: ____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): ____

☐ Discontinuous? Explain: ____

APPROVED JURISDICTIONAL DETERMINATION FORM

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	574.61	linear feet (ft),	3.61	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 244

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 244

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 244

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.63884
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	814.02	linear feet (ft),	9.05	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 245

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 245

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 245

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.46960
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 245

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft):
Average Depth (ft):
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 952.52 linear feet (ft), 13.76 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 246

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 246

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 246

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW:

☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	24.40403
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 246

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 2750.38 linear feet (ft), 17.36 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.10777
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1094.93 linear feet (ft), 8.73 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 248

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 248

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 248

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01448
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 248

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 248

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac):

Wetland Type, Explain:

Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: Explain:

Surface Flow is:

Characteristics:

Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- ☐ Wetland Directly Abutting Non-TNW
- ☐ Wetland Not Directly Abutting Non-TNW
  - ☐ Discrete wetland hydrologic connection Explain:
  - ☐ Ecologcal connection Explain:
  - ☐ Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 979.67 linear feet (ft), 5.09 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 249

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 249

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM

Feature ID: 249

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.04369
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1017.80 linear feet (ft), 6.44 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Feature ID: 25

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 25

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.17982
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 933.76 linear feet (ft), 13.10 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 250

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 250

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 250

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00396
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 250

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):
Average Width (ft): [ ]
Average Depth (ft): [ ]

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 43.58 linear feet (ft), 2.47 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

U.S Army Cops of Engineers

Feature ID: 251

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 251

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 251

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.09409
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	605.56	linear feet (ft),	13.29	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 252

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 252

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 252

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW:

☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	1.71649
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 252

Project waters are ____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are ____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: ____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: ____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): ____
Average Depth (ft): ____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: ____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: ____

Surface Flow is: Discrete and Confined Characteristics: ____
Subsurface Flow: No Explain: ____
☐ Dye (or other) test performed: ____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): ____

☐ Discontinuous? Explain: ____

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 663.14 linear feet (ft), 17.29 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 253

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 253

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 253

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01487
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 253

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):
Average Width (ft): [ ]
Average Depth (ft): [ ]
Average Side Slopes: 3:1

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1830.54 linear feet (ft), 6.64 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 254

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 254

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 254

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01641
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 54.98 linear feet (ft), 2.42 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 255

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 255

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 255

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.86799
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 255

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain:
Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain:

Tributary properties with respect to top of bank (estimate):
Average Width (ft):
Average Depth (ft):
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

- [x] Silts
- [ ] Sands
- [ ] Concrete
- [ ] Muck
- [ ] Cobbles
- [x] Gravel
- [ ] Bedrock
- [ ] Substrate - Vegetation

Other, Explain:

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume:

Surface Flow is: Discrete and Confined Characteristics:
Subsurface Flow: No Explain:

- [ ] Dye (or other) test performed:

Tributary Has (Check all that apply):

- [ ] Bed and Banks
- [x] OHWM (check all the apply): OHWM Indicators:
  - [ ] Clear, natural line impressed on the bank
  - [x] Changes in soil character
  - [ ] Shelving
  - [ ] Vegetation matted down, bent or absent
  - [ ] Leaf litter disturbed or washed away
  - [ ] Sediment deposition
  - [ ] Water staining
  - [x] Presence of litter and debris
  - [ ] Destruction of terrestrial vegetation
  - [ ] Presence of wrack line
  - [ ] Sediment sorting
  - [x] Scour
  - [ ] Multiple observed or predicted flow events
  - [ ] Abrupt change in plant community

Other (list):

- [ ] Discontinuous? Explain:

APPROVED JURISDICTIONAL DETERMINATION FORM

Characteristics:

Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- ☐ Wetland Directly Abutting Non-TNW
- ☐ Wetland Not Directly Abutting Non-TNW
  - ☐ Discrete wetland hydrologic connection Explain:
  - ☐ Ecologcal connection Explain:
  - ☐ Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1056.82 linear feet (ft), 29.07 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 256

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 256

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 256

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.10957
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 2290.32 linear feet (ft), 7.49 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

Feature ID: 257

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 257

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 257

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01471
Average Annual Rainfall (in):	10

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 892.11 linear feet (ft), 4.35 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 258

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 258

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 258

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00346
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 258

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 676.44 linear feet (ft), 3.92 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 259

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01633
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 983.27 linear feet (ft), 4.67 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 26

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 26

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 26

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.02585
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 26

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1100.40 linear feet (ft), 5.50 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 260

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 260

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 260

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.04921
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 260

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 684.65 linear feet (ft), 4.53 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 261

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.04136
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1285.08 linear feet (ft), 5.48 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 262

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 262

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 262

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00230
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 262

Project waters are _____ river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are _____ aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: _____

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: _____

Tributary properties with respect to top of bank (estimate):
Average Width (ft): _____
Average Depth (ft): _____
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: _____

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: _____

Surface Flow is: Discrete and Confined Characteristics: _____
Subsurface Flow: No Explain: _____
☐ Dye (or other) test performed: _____

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): _____

☐ Discontinuous? Explain: _____

If factors other than the OHWN were used to determine lateral extent of CWA jurisdiction (Check all that apply):

☐ High tide line indicated by:
- ☐ oil or scum line along shore objects
- ☐ fine shell or debris deposits (foreshore)
- ☐ physical markings/characteristics
- ☐ tidal gauges
- ☐ other

☐ Mean High water Mark indicated by:
- ☐ survey to available datum
- ☐ physical markings
- ☐ vegetation lines/changes in vegetation types

(iii) Chemical Characteristics:

Characterize Tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc):

Explain:

Identify Specific Pollutants, if known:

(iv) Biological Characteristics. Channel supports (check all that apply):

☐ Riparian Corridor Characteristics:

☐ Wetland Fringe Characteristics:

Habitat for:

- ☐ Federally Listed Species Explain findings:
- ☐ Fish/Spawn Areas Explain findings:
- ☐ Other environmentally -sensitive species Explain findings:
- ☐ Aquatic/Wildlife diversity Explain:

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics

Properties:

Wetland Size (ac):

Wetland Type, Explain:

Wetland Quality, Explain:

Project Wetlands Cross or Serve as State Boundaries, Explain:

(b) General Flow Relationship with Non-TNW:

Wetland Flow is: Explain:

Surface Flow is:

Characteristics:

Subsurface Flow: Explain Findings:

(c) Wetland Adjacency Determination with Non-TNW:

- ☐ Wetland Directly Abutting Non-TNW
- ☐ Wetland Not Directly Abutting Non-TNW
  - ☐ Discrete wetland hydrologic connection Explain:
  - ☐ Ecologcal connection Explain:
  - ☐ Separated by berm/barrier Explain:

(d) Proximity (Relationship) to TNW

Project Wetlands: River Miles from TNW:

Project Wetlands: Aerial Miles from TNW:

Flow is From:

Estimate approximate Location of Wetland within Floodplain:

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics: ect.).
Explain
Identify specific pollutants, if know:

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian Buffer Characteristics (type, average width):
- ☐ Vegetation type/percent cover. Explain:

Habitat for:

- ☐ Federally Listed Species Explain:
- ☐ Fish/Spawn Areas Explain:
- ☐ Other environmentally-sensitive species Explain:
- ☐ Aquatic/Wildlife Diversity Explain:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters	534.31	linear feet (ft),	4.73	width (ft)
☐ Other waters		acres		
☐ Wetlands		acres		

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 263

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 263

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 263

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.01392
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 917.32 linear feet (ft), 4.92 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 264

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 264

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.12585
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 4130.45 linear feet (ft), 13.22 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Maps, Plans, Plots or Plat Submitted by Applicant/Consultant: WestLand Resources, Inc.

☑ Data Sheets Prepared/Submitted by or on behalf of Applicant/Consultant

Additional Comments to Support JD:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 265

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 265

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.00590
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 265

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):
Average Width (ft): [ ]
Average Depth (ft): [ ]
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 558.84 linear feet (ft), 6.08 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 266

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 266

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 266

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.18038
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 266

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):
Average Width (ft): [ ]
Average Depth (ft): [ ]
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: [ ]

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: [ ]

Surface Flow is: Discrete and Confined Characteristics: [ ]
Subsurface Flow: No Explain: [ ]

Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 1052.77 linear feet (ft), 14.23 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 267

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 267

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 267

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	1.35312
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 3761.28 linear feet (ft), 11.08 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 268

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD) July 5, 2013

B. DISTRICT OFFICE, FILE NAME, AND NUMBER Los Angeles District, File No. Pending

C. PROJECT LOCATION AND BACKGROUND INFORMATION: Drainage Feature 268

State: AZ County/Parish/borough: Pinal County City: N/A

Center coordinates of site: Lat. 32.8482°N Long. -111.2599°W

Name of nearest waterbody:

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows:
Gila River between Powers Butte and Gillespie Dam

Name of watershed or Hydrologic Unit Code (HUC): 15050100

☑ Check if map/diagram of review are and/or potential jurisdictional areas is/are available upon request

☐ Check if other sites (e.g, offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY)

☐ Office (Desk) Determination. Date:

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 268

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.11249
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 268

Project waters are [ ] river Miles from tributary to RPW:
Project waters are 30 (or more) aerial (straight) miles from tributary to TNW:
Project waters are [ ] aerial (straight) miles from tributary to RPW:
Project waters cross or serve as state boundaries. Explain: [ ]

Identify flow route to TNW: Towards the Santa Cruz Flats through ephemeral tributaries, tributary to Picacho Reservoir, McClellan Wash, or ag fields. Discrete flow path is not often discernible past these points, but overall topography suggests flows would be towards the Gila River.

(b) General Tributary Characteristics

Tributary is: Natural Explain: [ ]

Tributary properties with respect to top of bank (estimate):
Average Width (ft): [ ]
Average Depth (ft): [ ]
Average Side Slopes: 3:1

Primary tributary substrate composition (check all that apply):

☑ Silts ☐ Sands ☐ Concrete ☐ Muck
☐ Cobbles ☑ Gravel
☐ Bedrock ☐ Substrate - Vegetation Other, Explain: [ ]

Tributary Condition/Stability [e.g., highly eroding, sloughing banks. Explain: Stable.
Presence of Run/Riffle/Pool Complexes. Explain: Not present.
Tributary Geometry: Relatively Straight
Tributary Gradient (approximate average slope): 1%

(c) Flow:

Tributary Provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 2-5
Describe Flow Regime: Ephemeral.
Other Information on Duration and Volume: [ ]

Surface Flow is: Discrete and Confined Characteristics: [ ]
Subsurface Flow: No Explain: [ ]
☐ Dye (or other) test performed: [ ]

Tributary Has (Check all that apply):

☐ Bed and Banks
☑ OHWM (check all the apply): OHWM Indicators:

☐ Clear, natural line impressed on the bank
☑ Changes in soil character
☐ Shelving
☐ Vegetation matted down, bent or absent
☐ Leaf litter disturbed or washed away
☐ Sediment deposition
☐ Water staining
☑ Presence of litter and debris
☐ Destruction of terrestrial vegetation
☐ Presence of wrack line
☐ Sediment sorting
☑ Scour
☐ Multiple observed or predicted flow events
☐ Abrupt change in plant community

Other (list): [ ]

☐ Discontinuous? Explain: [ ]

APPROVED JURISDICTIONAL DETERMINATION FORM

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in cumulative analysis:
Wetland acres in total being considered in cumulative analysis:
Describe each wetland (directly abuts tributary?; size in acres; overall biological, chemical or physical functions):

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
•Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
•Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to section III.D:

This ephemeral drainage is located more than 80 river miles from the nearest TNW, the Gila River between Powers Butte and Gillespie Dam. An analysis of peak yearly discharges and potential flood discharges, in combination with the geomorphology of the Analysis Area, the ephemeral nature of intervening drainage reaches, the significant alteration of the potential path of downgradient flow, and the distance to the TNW, suggests that the possibility of a hydrologic connection between this drainage and the TNW is tenuous. No pollutants or critical habitats were identified within the Analysis Area. Additionally, this unnamed ephemeral drainage does not provide lifecycle support functions, nutrients, or organic carbon to species within the TNW. This drainage does not have more than a speculative or insubstantial effect on the physical, chemical, and/or biological integrity of the TNW. Therefore, this unnamed ephemeral drainage

does not possess a significant nexus with the designated downstream TNW, the Gila River between Powers Butte and Gillespie Dam.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent welands, then go to SectionIII.D:

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of signifcant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY)

1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:

☐ TNWs Linear Feet: Width (ft): TNW Acres

☐ Wetlands adjacent to TNWs: Acres:

2. RPWs that flow directly or indirectly into TNWs

☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and Rationale indicating that tributary is perennial:

☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review are (check all that apply):

☐ Tributary waters Linear Feet: Width (Ft).

☐ Other non-wetland waters: Acres:

3. Non-RPWs that flow directly or indirectly into TNWs.

☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has significant nexus with a TNW is jurisdictional. Data supporting this conclusion provided at section III.c.

Provide estimates of jurisdictional waters within the review area (check all that apply):

Length (Linear Feet): Width (feet): Acres:

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting and RPW:

☐ Wetlands directly abutting an RPW where tributaries typically flow "Seasonally". Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2 above. Provide rationale indicating that wetland is directly abutting and RPW

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNW

☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetland in the review area: Acres:

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C..

Provide estimates for jurisdictional wetland in the review area (in acres):

7. Impoundments of jurisdictional waters.

Demonstration of Jurisdiction:

E. ISOLATED WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE

Supporting rationale:

Length (linear feet): Acres:

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS:

Non-Jurisdictional Waters

Explain finding of no Significant Nexus: See Section IIIC2.

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

☐ Non wetland-Waters (i.e., rivers, streams): linear feet : width (ft):

☐ Other Non-wetland Waters MBR acres:

☐ Wetlands MBR acres:

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

☑ Non-wetland waters 552.62 linear feet (ft), 8.81 width (ft)

☐ Other waters acres

☐ Wetlands acres

SECTION IV: DATA SOURCES

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

☑ Field Determination. Date(s): 10/2012

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION

There Are No "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329 in the review area.

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There **Are No** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area.

1. Waters of the U.S.

a. Indicate presence of water of U.S. in review area (Check all the apply):

☐ TNWs (new)
☐ Wetlands adjacent to TNWs
☐ Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs
☐ Non-RPWs that flow directly or indirectly into TNWs
☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
☐ Impoundments of jurisdictional waters
☐ Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-Wetlands waters Linear Feet Width (ft) and/or Acres

Wetlands Acres:

c. Limits (boundaries) of Jurisdiction based on:

2. Non-Regulated Waters/Wetlands (check if applicable):

☑ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined not to be jurisdictional:

Explain: Drainage is ephemeral and does not qualify as a TNW or RPW. Therefore, this drainage could only be considered jurisdictional if it possessed a significant nexus with a downstream TNW. This drainage does not possess a significant nexus with the downstream TNW.

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S Army Cops of Engineers

Feature ID: 269

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatice resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: ☐ Vegetation

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent"

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY)

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under Rapanos have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed Size (sq mi):	49650
Drainage Area (sq mi):	0.02501
Average Annual Rainfall (in):	10
Average Annual Snowfall (in):	0

(ii) Physical Characteristics:

(a) Relationship with TNW

☐ Tributary flows directly to TNW

☑ Tributary flows through 4 tributaries before entering TNW

Project waters are 30 (or more) river miles from TNW
